This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

Showing the disbursements for the service of the State Department for the fiscal year ending June 30, 1856	5	8	1
Communicating a list of the clerks and others employed in the State Department during the year 1856, the State or Territory from whence appointed, and the amount paid to each	5	20	1
Communicating statements of the number, sex, age, and occupation, &c., of passengers arriving in the United States from foreign countries during the year ending Dec. 31, 1856	8	54	1
Communicating statistical statements of the commerce of the United States with foreign nations, (quarto)	14	35	1
Reports, &c., of the Secretary of the Treasury, viz:			
On the state of the finances for the year ending June 30, 1856	1	3	1
List of papers accompanying the above, viz:			
No. 1. Statement of the receipts and expenditures for the year ending June 30, 1856	1	3	60
No. 2. Statement of the receipts and expenditures for the quarter of the fiscal year 1857 ending September 30, 1856	1	3	65
No. 3. Statement exhibiting the public debt March 4, 1853, and on November 15, 1856, stating the amount redeemed and premium paid, with the amount saved by paying before due	1	3	65
No. 4. Statement of amount due under treaties with various Indian tribes payable on time	1	3	67
No. 5. Statement of amount of stocks held in trust by the United States for several of the Indian tribes and Smithsonian Institution	1	3	77
No. 6. Statement of balance of various other trust funds	1	3	78
No. 7. Statement exhibiting the stock belonging to the United States in the Dismal Swamp, Chesapeake and Delaware, and Chesapeake and Ohio canals, and in the cities of the District of Columbia	1	3	79

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No 8. Statement exhibiting the gold and silver coinage at the mint of the United States in the several years from its establishment in 1792, and including the coinage of the branch mints and the assay office (New York) from their organization to September 30, 1856	1	3	79
No. 9. Statement exhibiting the deposits and coinage at the mint of the United States, branches, and assay office during the fiscal year ending June 30, 1856	1	3	81
No. 10. Statement exhibiting the amount of coin and bullion imported and exported annually from 1821 to 1856, inclusive, and also the amount of importation over exportation, and of exportation over importation, during the same years	1	3	83
No. 11. Statement exhibiting the gross value of exports and imports from the beginning of the government to June 30, 1856	1	3	84
No. 12. Statement exhibiting the amount of the tonnage of the United States annually from 1789 to June 30, 1856; also the registered and enrolled and licensed tonnage employed in steam navigation	1	3	85
No. 13. Statement exhibiting the registered sail and steam tonnage and enrolled and licensed sail and steam tonnage in each State and collection district separately	1	3	87
No. 14. Statement exhibiting the revenue collected from the beginning of the government to June 30, 1856, under the several heads of customs, public lands, and miscellaneous sources, including loans and treasury notes; also the expenditures during the same period, and the particular tariff and price of lands under which the revenue from those sources was collected	1	3	96
No. 15. Statement exhibiting the value of manufactured articles of domestic produce exported to foreign countries from the 30th day of June, 1845, to June 30, 1856	1	3	99
No. 16. Statement exhibiting the value of foreign merchandise imported, re-exported, and consumed annually from 1821 to 1856, inclusive, and also the estimated population and rate of consumption per capita during the same period	1	3	101
No. 17. Statement exhibiting the total value of imports and the imports consumed in the United States, exclusive of specie, during each fiscal year from 1821 to 1856, showing also the value of foreign and domestic exports, exclusive of specie, and the tonnage employed, during the same periods	1	3	102
No. 18. Statement exhibiting a summary view of the exports of domestic produce, &c., of the United States during the years ending June 30, 1847, 1848, 1849, 1850, 1851, 1852, 1853, 1854, 1855, and 1856	1	3	103
No. 19. Statement exhibiting the value of certain articles imported during the years ending June 30, 1844, 1845, 1846, 1847, 1848, 1849, 1850, 1851, 1852, 1853, 1854, 1855, and 1856, (after deducting the re-exportations,) and the amount of duty which accrued on each during the same period, respectively	1	3	104

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 20. Statement exhibiting the value of foreign merchandise and domestic produce, &c., exported annually from 1821 to 1856	1	3	107
No. 21. Statement exhibiting the quantity of wine, spirits, &c., imported annually from 1843 to 1856 inclusive	1	3	109
No. 22. Statement exhibiting the value of imports annually from 1821 to 1856	1	3	111
No. 23. Statement exhibiting the value of dutiable merchandise re-exported annually from 1821 to 1856 inclusive, and showing, also, the value re-exported from warehouses under the act of August 6, 1846	1	3	112
No. 24. Statement exhibiting the aggregate value of breadstuffs and provisions exported annually from 1821 to 1856	1	3	113
No. 25. Statement exhibiting the quantity and value of cotton exported annually from 1821 to 1856 inclusive, and the average price per pound	1	3	114
No. 26. Statement exhibiting the quantity and value of tobacco and rice exported annually from 1821 to 1856 inclusive	1	3	115
No. 27. Statement exhibiting the values of iron and manufactures of iron, and iron and steel, steel, wool and manufactures of wool, manufactures of cotton, silk and manufactures of silk, flax, linen and linen fabrics, hemp and manufactures of hemp, manilla, sun, and other hemps of India, and silk and worsted goods, imported from and exported to foreign countries from 1840 to 1856, both years inclusive; and also showing the domestic exports of like articles for the same periods	1	3	117
No. 28. Statement exhibiting the value of iron, manufactures of iron, and iron and steel, steel, sugar, wines, and all fabrics of which wool, cotton, silk, flax, or hemp is a component part, imported annually from 1847 to 1856, both inclusive, with the duties which accrued thereon during each year respectively	1	3	123
No. 29. Statement exhibiting the exports to and the imports from Canada and other British possessions in North America, from the 1st day of July, 1851, to the 30th day of June, 1856	1	3	126
No. 30. Statement exhibiting the amount of goods in warehouse on July 1, 1855, and on the 1st of each succeeding month, until July 1, 1856	1	3	126
No. 31. Statement exhibiting a synopsis of the returns of the banks in the different States at the dates annexed	1	3	133
No. 32. Statement exhibiting a comparative view of the condition of the banks in different sections of the Union in 1853–'54, 1854–'55, and 1855–'56	1	3	136
No. 33. Statement exhibiting a general statement of the condition of the banks according to returns dated nearest to January 1, 1856	1	3	139
No. 34. Statement exhibiting a comparative view of the condition of the banks of the United States, according to returns nearest to January 1, 1837, 1843, 1851, 1854, 1855, and 1856	1	3	140

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 35. Statement exhibiting the amount of capital employed by bankers banking without charters, and by money and exchange brokers, in the different States	1	3	141
No. 36. Statement exhibiting the population of the different States and Territories, and the value of the real and personal estate therein; it having been prepared in part from official enumerations and valuations, and in part upon estimates	1	3	146
No. 37. Statement exhibiting the amount of moneys in the United States treasury; amount of drafts outstanding; amount subject to draft; amount of receipts and amount of drafts paid, as shown by the Treasurer's weekly exhibits rendered during the year ending June 30, 1856	1	3	149
Statement B No. 1, showing the annual average export price of flour at New York from 1800 till June 30, 1855; also the annual average price of flour in the cities of Boston, New York, Philadelphia, Baltimore, New Orleans, and St. Louis, from 1800 till June 30, 1855	1	3	154
Statements B No. 2 to B No. 6, inclusive, exhibiting the population of the several States and Territories, with certain statistical information, taken from the censuses of 1790, 1800, 1810, 1820, 1830, 1840, and 1850	1	3	158
Statement B No. 7, recapitulating the previous statements, and giving the population of the United States according to said census returns	1	3	168
Statement B No. 8, exhibiting the population of each State and Territory according to census of 1840, and the amount of the agricultural and manufacturing productions of each; to which is added a column exhibiting the amount said production would give to each person in said States and Territories, &c.	1	3	169
Statement B No. 9, making same exhibits from the census returns of 1850	1	3	172
No. 38. From A No. 1 to A No. 17 are sundry resolutions of the House of Representatives calling for certain statistical information in connexion with a proposed modification of the tariff of 1846, and a reduction of the revenue by enlarging the free list, and calling for suggestions upon that subject, and in relation to the currency [The accompanying tables are prepared in response to the resolutions.]	1	3	151
No. 39. Statement exhibiting the population of the States and Territories, and the agricultural productions of each, with the value thereof; the total value of all the products of each State and Territory for the year 1840	1	3	174
No. 40. Statement exhibiting the population of the States and Territories, and the agricultural productions of each, with the value thereof; the total value of all the products of each State and Territory for the year 1850	1	3	182

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 41. Statement exhibiting a recapitulation of statements Nos. 39 and 40, exhibiting the quantities and values of the agricultural productions of the United States for the decades of 1840 and 1850, with an estimate thereof for 1855, and the total amount of the productions for all the States and Territories, for 1840 and 1850	1	3	196
No. 42. Statement exhibiting the number of acres employed in the production of the different crops in the States and Territories, their total product and value, together with the product and value per acre, for the year 1850	1	3	198
No. 43. Statement exhibiting the number of farms, plantations, &c., number of acres of improved and unimproved land; average number of acres to each farm; cash value of farms; value of farming implements and machinery; average value of farms; average value of farming implements and machinery; average value of farms, implements, and machinery, for each State and Territory, and the average in all the States and Territories, in 1850, as taken from the last census	1	3	199
No. 44. Statement exhibiting the number of establishments, capital employed, raw material used, hands employed, average wages per month, and product of the manufactures of wool for 1850, as taken from the census for that decade; also the product of the manufactures of wool for 1840, the increase for ten years, the decrease for ten years, and an estimate for 1855	1	3	201
No. 45. Statement exhibiting the foreign importations and exportations, domestic exportations and home consumption of foreign wool, the foreign importations and exportations, and home consumption of foreign woolen manufactures, the estimate of the raw material contained in the foreign manufacture of wool consumed in the United States, the number of pounds of domestic wool consumed, and an estimate of the total consumption of wool consumed in the United States of domestic growth, foreign importations, and one-third of the foreign manufactured article	1	3	203
No. 46. Statement exhibiting the population, manufactures of wool in the United States, with an allotment per capita thereof; the domestic wool, and an allotment per capita; home consumption of foreign wool, and the allotment per capita; total home consumption of foreign and domestic wool, and an allotment per capita; manufactures of foreign wool imported and consumed in the United States, and an allotment per capita thereof; total consumption of foreign and domestic woolen manufactures, and the allotment per capita; and the total consumption of foreign and domestic wool, and one-third the value of the foreign woolen imports, (which represents the estimated value of the raw material therein,) together with an allotment per capita thereof, for the years 1840, 1850, and 1855	1	3	204

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 47. Statement exhibiting the number of pounds of wool produced, and its value; the number of pounds of domestic wool exported, and its value and the home consumption; the number of pounds of wool imported, and its value; the number of pounds of foreign wool re-exported, and its value; and the home consumption, with the value thereof; the value of imported woolen manufactures, and those re-exported, and the home consumption, together with the total number of pounds of domestic and imported wool consumed, and the total value of domestic and imported wool and imported woolen manufactures consumed in the States and Territories, for the years 1840, 1850, and 1855	1	3	205
No. 48. Statement exhibiting the number of establishments, capital employed, raw material used, hands employed, average wages per month, and the product of the manufactures of cotton, for 1850, as given by the census for that decade; also the product of the manufactures of cotton for 1840, increase in ten years, decrease in ten years, and an estimate of the manufactures of cotton for 1855	1	3	207
No. 49. Statement exhibiting the foreign importations and re-exportations, domestic exportations and home consumption of foreign cotton goods, together with the consumption of foreign cotton goods over domestic exportations; also the number of pounds of Sea Island and other cotton annually exported, with the value thereof, and average cost per pound, and the yearly average of the imports and exports, value in gross and per pound of cotton exported, for the last seventeen years	1	3	209
No. 50. Statement exhibiting the foreign importations and exportations; domestic exportations; home consumption of foreign cotton goods; home consumption of foreign cotton goods, less domestic exportations; the number of pounds of Sea Island and other cotton exported, the value thereof, and the average cost per pound; manufactures of cotton in the United States; home consumption of domestic cotton goods; total home consumption of foreign and domestic cotton goods, and the total product of manufactures of cotton, and exports of raw cotton, for the years 1840, 1850, and 1855	1	3	210
No. 51. Statement exhibiting the population, total product of manufactures of cotton and exports of raw cotton, and the allotment per capita thereof; manufactures of cotton in the United States, and the allotment per capita; home consumption of domestic goods, and the allotment per capita; home consumption of foreign goods, and the allotment per capita; and the total home consumption of foreign and domestic cotton goods, and the allotment per capita, for the years 1840, 1850, and 1855	1	3	211

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 52. Statement exhibiting the number of establishments, capital employed, raw material used, hands employed, average wages per month, annual product and total value of pig iron produced in the United States in 1850, as taken from the census for that year; together with the value of the production of the same article for 1840, the increase in ten years, the decrease in ten years, and an estimate of the amount produced in 1855	1	3	212
No. 53. Statement exhibiting the number of establishments, capital employed, raw material used, hands employed, average wages per month, and total value of iron castings produced in the United States in 1850, as taken from the census for that year; together with the value of the production of the same article for 1840, the increase in ten years, the decrease in ten years, and an estimate of the amount produced in 1855	1	3	214
No. 54. Statement exhibiting the number of establishments, capital employed, value of raw material, hands employed, average wages per month, and total value of wrought iron manufactures produced in the United States in 1850, as taken from the census for that year; together with the value of the production of the same article for 1840, the increase in ten years, the decrease in ten years, and an estimate of the amount produced in 1855	1	3	216
No. 55. Statement exhibiting the yearly value of iron and manufactures of iron and iron and steel, cast, shear, German, and other steel, imported from and exported to foreign countries; domestic exports of the like articles; home consumption of foreign iron, and manufactures of iron and iron and steel; home consumption over the domestic export of the same articles, and the total consumption of foreign iron, manufactures of iron and iron and steel, cast, shear, German, and other steel, over domestic exportations for the last seventeen years, and the yearly average for the aforesaid period	1	3	217
No. 56. Statement exhibiting the value of the foreign importations and exportations, domestic exportations, home consumption of foreign importations, and home consumption of foreign importations, less the domestic exportations, of iron and manufactures of iron, and iron and steel; also the foreign importations and exportations; home consumption of foreign importations; total home consumption of foreign iron and manufactures of iron and iron and steel, and foreign cast, shear, German, and other steel; the total home consumption of foreign iron and manufactures of iron and iron and steel, and foreign cast, shear, German, and other steel, less the domestic exportations; also the manufacture of pig iron, iron castings, wrought iron, and the manufactures thereof in the United States; total manufacture of pig iron, iron castings, and wrought iron, and

Reports from Secretary of the Treasury—Continued.			
the manufactures thereof in the United States; consumption of domestic iron, and the manufactures thereof; total consumption of foreign and domestic iron; and the total consumption of foreign and domestic iron and manufactures of iron, also cast, shear, German, and other steel, in the United States for the years 1840 and 1850, with an estimate thereof for 1855, on the same ratio of increase as between the years 1840 and 1850	1	3	219
No. 57. Statement exhibiting the population, production of pig iron, iron castings, and manufactures of wrought iron, with the allotment per capita thereof; the consumption of domestic iron and the manufactures thereof, with the allotment per capita; the home consumption of foreign importations of iron and manufactures of iron and iron and steel, and cast, shear, German, and other steel, with the allotment per capita; and the total consumption of foreign and domestic iron, and manufactures of iron and iron and steel, cast, shear, German, and other steel, in the United States, and the allotment per capita thereof, for the years 1840, 1850, and an estimate for 1855	1	3	220
No. 58. Statement exhibiting comparative statement of the quarterly price of refined bar iron at the ports of Boston, New York, Philadelphia, and Baltimore, with the quarterly and annual average price at the above four ports, for the last seventeen years	1	3	221
No. 59. Statement exhibiting prices of steel in New York, from 1851 to 1856, inclusive	1	3	223
No. 60. Statement exhibiting a list of unmanufactured articles of import, not produced in the United States in sufficient quantities to constitute them articles of trade	1	3	224
No. 61. Statement exhibiting the foreign importations and exports, and domestic exports, together with the home consumption of foreign importations of leather and the manufactures thereof, and the home consumption of foreign importations of leather and the manufactures thereof, less domestic exports, for the last seventeen years, and the yearly average thereof	1	3	226
No. 62. Statement exhibiting the population, home consumption of foreign importations of leather and manufactures of leather, and the allotment per capita thereof, together with the home consumption of foreign importations of leather and the manufactures of leather, less domestic exports in the United States, for the years 1840, 1850, and 1855	1	3	226
No. 63. Statement exhibiting the foreign importations and exportations, domestic exports, and home consumption of foreign importations of hides and skins, also home consumption of foreign importations of hides and skins, less domestic exports, and domestic exports, less home consumption, of foreign importations of hides and skins in the United States for the last seventeen years, and the yearly average thereof	1	3	227

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 64. Statement exhibiting the population, home consumption of foreign importations of hides and skins, and the per capita thereof; also the home consumption of foreign importations of hides and skins, less domestic exports, and the allotment per capita thereof, for the years 1840, 1850, and 1855	1	3	227
No. 65. Statement exhibiting the foreign importations and exportations, domestic exports, and home consumption of foreign importations of manufactures of glass, and the home consumption of foreign importations of manufactured glass, less the domestic exports thereof, in the United States for the last seventeen years, and the annual average thereof	1	3	228
No. 66. Statement exhibiting the population, home consumption of the foreign importations of manufactured glass, and the allotment per capita thereof; also the home consumption of the foreign importations of manufactured glass, less domestic exports, and the allotment per capita thereof, in the United States for the years 1840, 1850, and 1855	1	3	228
No. 67. Statement exhibiting the foreign importations and exportations, domestic exports and home consumption of the foreign importations of china, porcelain, earthen, and stone ware; also the home consumption of foreign importations of china, porcelain, earthen, and stone ware, less domestic exports, in the United States for the last seventeen years, and the annual average thereof	1	3	229
No. 68. Statement exhibiting the population, home consumption of the foreign importations of manufactures of china, porcelain, earthen, and stone ware, and the allotment per capita thereof; also the home consumption of the foreign importations of manufactures of china, porcelain, earthen, and stone ware, less the domestic exports, and the allotment per capita, in the United States for the years 1840, 1850, and 1855	1	3	229
No. 69. Statement exhibiting the foreign importations and exportations, domestic exports and home consumption, less domestic exports of hemp; the foreign importations and exportations and home consumption of manilla, sun, and other hemp of India, and the total home consumption of all kinds of imported hemp; also the foreign importations and exportations, home consumption, domestic exports, and home consumption, less domestic exports, of manufactures of hemp, together with the total home consumption of all kinds of imported hemp, and the imported manufactures thereof over the domestic exports in the United States for the last seventeen years, and the yearly average thereof	1	3	230
No. 70. Statement exhibiting the foreign importations and exportations, and the home consumption of imported flax; also the foreign importations and exportations of linen and linen fabrics, and the home consumption thereof, together with the			

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
total home consumption of imports of flax, and the manufactures of flax in the United States for the last seventeen years, and the yearly average thereof.	1	3	232
No. 71. Statement exhibiting the population, consumption of imported hemp in the United States, less domestic exports, and the per capita thereof, the consumption of the imported manufactures of hemp, less domestic exports, with the per capita thereof, and the total consumption of hemp, and the manufactures of hemp, less domestic exports, and the per capita thereof, in the United States for the years 1840, 1850, and 1855	1	3	233
No. 72. Statement exhibiting the population, consumption of imported flax in the United States, and the allotment per capita thereof; the consumption of imported manufactures of flax, and the allotment per capita thereof; and the total consumption of imported flax, and imported manufactures of flax, with the allotment per capita thereof, in the United States, for the years 1840, 1850, and 1855	1	3	233
No. 73. Statement exhibiting the population, product of hemp and flax grown in the United States, and the allotment per capita thereof; total consumption of hemp and flax in the United States, less domestic exports, and the allotment per capita thereof, and the total consumption of foreign and domestic hemp and flax, and the foreign manufactures of hemp and flax, less domestic exports, with the allotment per capita, for the years 1840 and 1850	1	3	234
No. 74. Statement exhibiting the foreign importations and exportations, domestic exports and home consumption of coal; also the home consumption of the foreign importations of coal, less the domestic exports, and domestic exports, less the home consumption of foreign importations of coal in the United States for the last seventeen years, and the annual average thereof	1	3	235
No. 75. Statement exhibiting the population, home consumption of the foreign importations of coal, and the per capita thereof, and the home consumption of the foreign importations of coal, less the domestic exports, and the allotment per capita thereof in the United States, for the years 1840, 1850, and 1855	1	3	235
No. 76. Statement exhibiting the foreign importations and exportations, domestic exports and home consumption of foreign importations of lead, and the manufactures thereof; also home consumption of foreign importations, less domestic exports, of lead and the manufactures of lead, and domestic exports, less home consumption of foreign importations, of lead and the manufactures thereof, for the last seventeen years, and the annual average thereof	1	3	236

Subject.	Vol.	No.	Page.
Reports from Secretary of the Treasury—Continued.			
No. 77. Statement exhibiting the population, home consumption of foreign importations of lead and manufactures of lead, and the allotment per capita thereof; also the home consumption of foreign importations of lead, and the manufactures of lead, less the domestic exports, and the allotment per capita thereof, for the years 1840, 1850, and 1855	1	3	236
No. 78. Statement exhibiting the foreign importations, foreign and domestic exportations and home consumption of foreign copper, and the manufactures thereof, together with the total home consumption of foreign copper and manufactures of copper, less domestic exports, for the last seventeen years, and the yearly average thereof	1	3	237
No. 79. Statement exhibiting the population, home consumption of foreign copper, and the manufactures thereof, with the allotment per capita, and total home consumption of foreign copper and manufactures of copper, less domestic exports, and the allotment per capita thereof, for the years 1840, 1850, and 1855	1	3	237
No. 80. Statement exhibiting the foreign importations and exportations and home consumption of foreign silk, the foreign importations, exportations, and home consumption of manufactures of silk, and the total homo consumption of importation of silks and manufactures of silk in the United States, for the last seventeen years, with the yearly average thereof	1	3	238
No. 81. Statement exhibiting the population, consumption of imported silk, and the allotment per capita thereof; consumption of imported manufactures of silk, and the per capita thereof, and the total home consumption of importations of silk and manufactures of silk in the United States, with the allotment per capita thereof, for the years 1840, 1850, and 1855; also the productions of silk in the United States, and the allotment per capita thereof, and the total consumption of foreign and domestic silk and foreign manufactures of silk in the United States, and the allotment per capita thereof, for the years 1840 and 1850	1	3	239
No. 82. Statement exhibiting railroad statistics of the United States	1	3	240
No. 83. Statement of United States stocks, State, city, county, town, bank, &c., &c., stocks and bonds held at home and abroad	1	3	426
No. 84. Statement of cost of coinage at the mint and branches, including buildings, machinery, &c	1	3	427
No. 85. Statement of amount of gold and silver supposed to be in circulation; amount supposed to be in banks; amount supposed to be in the country, and the amount of bank notes in circulation, at the different periods therein named	1	3	434
No. 86. Statement of number and amount of condemnations of imported goods for frauds on the revenue in the district of New York from 1842 to 1856	1	3	436

34TH CONGRESS, 3d Session. | SENATE. | Ex. Doc. No. 23.

LETTER

FROM

THE TREASURER OF THE UNITED STATES,

COMMUNICATING

Copies of his accounts for the third and fourth quarters of the year 1855, *and the first and second quarters of the year* 1856.

DECEMBER 4, 1856.—Read, and ordered to lie on the table.
JANUARY 15, 1857.—Ordered to be printed.

TREASURY OF THE UNITED STATES,
December 3, 1856.

SIR: In pursuance of law, I have the honor to transmit herewith copies of my accounts with the United States for the third and fourth quarters of the year 1855, and the first and second quarters of the year 1856, as adjusted by the accounting officers of the Treasury Department.

Very respectfully, yours,

SAM. CASEY,
Treasurer of the United States.

Hon. JESSE D. BRIGHT,
President of the Senate of the United States.

The United States in account with Samuel Casey, Treasurer of said States, for receipts and expenditures for the 3d quarter of 1855.

THIRD QUARTER 1855—Continued.

EXPLANATORY STATEMENT.

It will be seen by the foregoing statements that adjusted balances in the hands of the Treasurer of the United States, on the 1st day of October, 1855, is		$50,563,061 14
But he has received and directed the payment of sundry warrants (not returned at the time of settlement, and consequently not charged in the account) the amounts of which, as he has given conditional credit for them to the different depositaries, lessens so much the above balance, per statement B		297,983 37
		50,265,077 77
In addition to which the Treasurer holds in his hands various sums deposited to his credit for which warrants have not been issued, and which, consequently, cannot as yet be legally charged to his account, but which are properly to be added to the above, per statement C		361,848 57
		50,626,926 34
From which deduct for partial payments of warrants for which covering warrants have been issued, but for which the Treasurer has not as yet claimed credit, per statement D		29,068 13
		50,597,858 21
Making the sum as actually at his credit in the various depositories, mints, and the several States, as exhibited in statement A—		
Depositaries and mints	$22,496,213 30	
Several States	28,101,644 91	
		50,597,858 21

SAM. CASEY,
Treasurer United States.

TREASURY OF THE UNITED STATES,
October 1, 1855.

AUDITOR'S REPORT.

No. 122633.

TREASURY DEPARTMENT,
First Auditor's Office, May 1, 1856.

I have examined and adjusted the account of Samuel Casey, Treasurer of the United States, commencing on the 1st day of July, and ending on the 30th day of September, 1855, and find that he is chargeable with and accountable to the United States for the following sums, viz:

To balance of his account ending June 30, 1856, per report No. 120591	$47,777,672 13
To amount of sundry warrants drawn in his favor for moneys received from the 1st of July to the 30th of September, 1855, inclusive, arising as follows:	
From duties laid on goods, wares, and merchandise imported into the United States, and on tonnage of ships and vessels ... per statement.	17,085,238 28
From sales of public lands ... do	2,355,725 87
From fines, penalties, and forfeitures ... do	4,124 85
From fees on letters patent ... do	44,686 40
From fees for licensing engineers and pilots of steamboats and inspectors, &c ... do	6,441 75
From moneys received on account of capters ... do	6,139 80
From moneys received on account of navy pension fund ... do	3,054 80
From military contributions during the war with Mexico ... do	7,612 56

FOURTH QUARTER 1855—Continued.

EXPLANATORY STATEMENT.

It will be seen by the foregoing statements that the adjusted balance in the hands of the Treasurer of the United States, on the 1st day of January, 1856, is		$50,991,300 44
But he has received and directed the payment of sundry warrants (not returned at the time of settlement, and consequently not charged in the account) the amount of which, as he has given conditional credit for them to the different depositaries, lessens so much the above balance, per statement B		466,718 85
		50,524,581 59
In addition to which the Treasurer holds in his hands various sums deposited to his credit for which warrants have not been issued, and which, consequently, cannot as yet be legally charged to his account, but which are properly to be added to the above, per statement C		288,262 87
		50,812,844 46
From which deduct for partial payments of warrants for which covering warrants have been issued, but for which the Treasurer has not yet claimed credit, per statement D		4,768 13
		50,808,076 33
Making the sum as actually at his credit in the various depositaries, mints, and the several States, as exhibited in statement A—		
Depositaries and mints	$22,706,431 42	
Several States	28,101,644 91	
		50,808,076 33

SAM. CASEY,
Treasurer United States.

TREASURY OF THE UNITED STATES,
February 20, 1856.

FOURTH QUARTER 1855—Continued.

No. 122593.

TREASURY DEPARTMENT,
First Auditor's Office, July 28, 1856.

I have examined and adjusted the account of Samuel Casey, Treasurer of the United States, commencing on the 1st day of October, and ending on the 31st day of December, 1855, and find that he is chargeable with and accountable to the United States for the following sums, viz:

To balance of his account ending September 30, 1855, per report No. 122633		$50,563,061 14
To amount of sundry warrants drawn in his favor for moneys received from the 1st of October to the 31st of December, 1855, inclusive, arising as follows:		
From duties laid on goods, wares, and merchandise imported into the United States, and on tonnage of ships and vessels	per statement.	13,424,038 57
From sales of public lands	do	3,273,868 02

FIRST QUARTER 1856—Continued.

EXPLANATORY STATEMENT.

It will be seen by the foregoing statement that the adjusted balance in the hands of the Treasurer of the United States, on the 1st day of April, 1856, is		$52,567,316 81
But he has received and directed the payment of sundry warrants (not returned at the time of settlement, and consequently not charged in the account) the amount of which, as he has given conditional credit for them to the different depositaries, lessens so much the balance, per statement B		646,242 94
		51,921,074 60
In addition to which the Treasurer holds in his hands various sums deposited to his credit for which warrants have not been issued, and which, consequently, cannot as yet be legally charged to his account, but which are properly to be added to the above, per statement C		386,948 05
		52,308,022 65
From which deduct for partial payments of warrants for which covering warrants have been issued, but for which the Treasurer has not yet claimed credit, per statement D		5,506 90
		52,302,515 75
Making the sum as actually at his credit in the various depositaries, mints, and the several States, as exhibited in statement A—		
Depositaries and mints	$24,200,870 84	
Several States	28,101,644 91	
		52,302,515 75

SAM. CASEY,
Treasurer United States.

TREASURY OF THE UNITED STATES,
May 23, 1856.

AUDITOR'S REPORT.

No. 124394.

TREASURY DEPARTMENT,
First Auditor's Office, September 24, 1856.

I have examined and adjusted the account of Samuel Casey, Treasurer of the United States, commencing on the 1st day of January, and ending on the 31st day of March, 1856, and find he is chargeable with and accountable to the United States for the following sums, viz:

To balance of his account ending December 31, 1855, per report No. 123593	$50,991,300 44
To amount of sundry warrants drawn in his favor for moneys received from the 1st January to the 31st March, 1856, inclusive, arising as follows:	
From duties laid on goods, wares, and merchandise imported into the United States, and on tonnage of ships and vessels ... per statement.	16,737,114 01
From sales of public lands ... do	1,450,073 04
From fines, penalties, and forfeitures ... do	5,229 63
From fees on letters patent ... do	44,209 44
From fees for licensing engineers and pilots of steamboats and inspectors, &c ... do	8,446 73
From fees received by consuls ... do	15,376 36
From military contributions received during the war with Mexico ... do	6,801 78
From premiums on transfer drafts ... do	13,412 50
From surplus of official emoluments of officers of customs ... do	502 98
From sale of old building on custom-house lot at Providence, R. I ... do	755 00
From consular receipts ... do	2,982 08
From persons unknown ... do	10 00
From what account not ascertained ... do	50
From interest on fund invested for the benefit of the Smithsonian fund ... do	3,559 85
From interest on funds invested for the benefit of the Chickasaw Indians ... do	40,883 69
From interest on funds invested for the benefit of certain Indian tribes ... do	37,252 20
From reimbursements of Maryland 5 per cent. stock for the benefit of Chickasaw Indians ... do	94,233 00
From sales of certain tracts of land for the benefit of Choctaw orphans ... do	25,134 00
From repayments made by sundry persons on account of moneys previously advanced them ... do	31,586 24
From repayments made by sundry persons on account of moneys previously advanced by the War Department ... do	576,473 19
From repayments made by sundry persons on account of moneys previously advanced by the Navy Department ... do	475,229 77
From repayments made by sundry persons on account of moneys previously advanced by the Department of the Interior ... do	43,785 33
	70,534,363 76

And that he is entitled to credit for the amount of warrants discharged by him from the 1st January to the 31st March, 1856, which are to be charged to the following heads of expenditure, viz:

Compensation and mileage of senators ... per statement.	60,000 00

D.

Statement showing the partial payment of warrants for which covering warrants have been issued, but for which the Treasurer has not yet claimed credit, viz:

2747 part.	Collector, Point Isabel, Texas.....2d quarter 1855	$638 78
8224 part.	Receiver Public Moneys, Stillwater, Min	10,000 00
		10,638 78

SECOND QUARTER 1856—Continued.

EXPLANATORY STATEMENT.

It will be seen by the foregoing statement that the adjusted balance in the hands of the Treasurer of the United States, on the 1st day of July, 1856, is		$49,108,229 80
But he has received and directed the payment of sundry warrants (not returned at the time of settlement, and consequently not charged in the account) the amount of which, as he has given conditional credit for them to the different depositaries, lessens so much the balance, per statement B		1,074,224 87
		48,034,004 93
In addition to which the Treasurer holds in his hands various sums deposited to his credit for which warrants have not been issued, and which, consequently, cannot as yet be legally charged to his account, but which are properly to be added to the above, per statement C		383,123 54
		48,417,128 47
From which deduct for partial payments of warrants for which covering warrants have been issued, but for which the Treasurer has not yet claimed credit, per statement D		10,638 78
		48,406,489 69
Making the sum as actually at his credit in the various depositaries, mints, and the several States, as exhibited in statement A—		
Depositaries and mints	$20,304,844 78	
Several States	28,101,644 91	
		48,406,489 69

SAM. CASEY,
Treasurer United States.

TREASURY OF THE UNITED STATES,
August 14, 1856.

AUDITOR'S REPORT.

No. 194980.

TREASURY DEPARTMENT,
First Auditor's Office, November 17, 1856.

I have examined and adjusted the account of Samuel Casey, Treasurer of the United States, commencing on the 1st day of April, and ending on the 30th day of June, 1856, and find that he is chargeable with and accountable to the United States for the following sums, viz:

34TH CONGRESS, 3d Session. } SENATE. { Ex. Doc. No. 24.

MESSAGE

OF

THE PRESIDENT OF THE UNITED STATES,

RESPECTING

The restoration of the Ship "Resolute" to the British Government.

JANUARY 20, 1857.—Read, ordered to lie on the table and be printed. Motion to print 2,000 additional copies referred to the Committee on Printing.

FEBRUARY 6, 1857.—Report in favor of printing the additional copies, and report agreed to.

To the Senate and House of Representatives:

Soon after the close of the last session of Congress I directed steps to be taken to carry into effect the joint resolution of August 28, 1856, relative to the restoration of the ship "Resolute" to her Britannic Majesty's service. The ship was purchased of the salvors at the sum appropriated for the purpose, and "after being fully repaired and equipped," was sent to England under control of the Secretary of the Navy. The letter from her Majesty's minister of foreign affairs, now communicated to Congress in conformity with his request, and copies of correspondence from the files of the Departments of State and of the Navy, also transmitted herewith, will apprize you of the manner in which the joint resolution has been fully executed, and show how agreeable the proceeding has been to her Majesty's government.

FRANKLIN PIERCE.

WASHINGTON, *January* 19, 1857.

Mr. Dallas to Mr. Marcy.

[Extract.]

[No. 34.] LEGATION OF THE UNITED STATES, *London, December* 19, 1856.

SIR: * * * * * * * *

Late in the morning of Saturday, the 13th instant, your No. 36 was delivered to me by Commander Hartstene, who had that morning ar-

rived with the barque Resolute, at Portsmouth. I addressed the Earl of Clarendon at once, in conformity with your instructions, tendering the ship to the British government, with a request that the United States might be allowed to restore her to her Majesty's service. In a private note I also sought an interview with his lordship, in order to arrange whatever formalities the proceeding might require. He was out of town; but on Monday I received a note from him, saying that he would return to London, and be happy to see me at three o'clock, on Tuesday, the 16th instant. Our conference was an entirely agreeable one; his lordship characterizing the restoration of the Resolute as an act of national courtesy wholly unprecedented, and which could not fail to have the most beneficial influence upon the relations of the two countries. As I desired to put Captain Hartstene in communication with the admiralty, I made inquiries about Sir Charles Wood, uad was informed by his lordship that he was probably at his country residence, but should be immediately apprized of my wishes; and would, no doubt, come to the city without delay. At about nine o'clock that night, (Tuesday,) I received the reply of her Majesty's principal secretary of state for foreign affairs to my offering letter of the 13th. Copies of these communications accompany this despatch.

* * * * * * * *

I have the honor to be, your most obedient servant,

G. M. DALLAS.

Hon. W. L. MARCY, *Secretary of State.*

Mr. Dallas to the Earl of Clarendon.

LEGATION OF THE UNITED STATES,
London, December 13, 1856.

MY LORD: The barque Resolute, under the command of Commander Hartstene, of the United States navy, having reached Portsmouth, I beg leave briefly to invoke your lordship's attention to the cause and object of her arrival.

It will be recollected that this vessel formerly belonged to her Majesty's navy, and had been employed on a perilous service which enlisted the co-operative sympathies and exertions of the American government and people. The officers and crew, after gallantly enduring prolonged suffering, left her inextricably imbedded, as they had just reason to believe, in the ice of the arctic region. She was, however, about two years afterwards, discovered adrift more than twelve hundred miles from the place at which she had been abandoned, and was taken by certain American seamen to their own country. All claim to recover and repossess her was generously waived by her Majesty's government in favor of those by whom she had been rescued.

The Senate and House of Representatives of the United States, at their late session, expressed, by a joint resolution, the sincere dispo-

sition and purpose of the nation on this subject, and I have the honor to place before your lordship a duly authenticated copy of that act.

I am now specially instructed by the President, while conveying to your lordship the assurance of his cordial gratification in directing such a measure of comity to a friendly power, to fulfil the congressional injunction, by tendering the barque Resolute to her Majesty's government, and by requesting that the United States may be allowed to restore that vessel, with all her armament, equipment, and property, preserved in good condition, to her Majesty's service.

Seizing an occasion so agreeable, personally to myself, to renew the expression of my highest consideration, I have the honor to be, your lordship's most obedient servant,

G. M. DALLAS.

To the Right Hon. THE EARL OF CLARENDON,
&c., &c., &c.

The Earl of Clarendon to Mr. Dallas.

FOREIGN OFFICE, *December* 16, 1856.

SIR: I have the honor to acknowledge the receipt of your letter of the 13th instant, announcing to me the arrival of the barque "Resolute" at Portsmouth, under the command of Captain Hartstene, of the United States navy. That vessel, after having been unavoidably abandoned in the ice, while employed in the service of her Majesty, on an expedition in the arctic seas in search of Sir John Franklin, was discovered two years afterwards adrift, more than twelve hundred miles from the place where she was abandoned, and was taken to the United States by some American seamen, in whose favor her Majesty's government relinquished all claim to the ship. Under these circumstances, the Senate and House of Representatives of the United States, by a joint resolution, of which you transmit to me a certified copy, authorized the President of the United States to purchase the "Resolute" of her salvors, with all her armament, equipment, and the property on board of her when she arrived in the United States, and to cause the ship, with everything belonging to her, after being fully repaired at one of the navy yards of the United States, to be sent back to England, in order to be restored to her Majesty's service, as a testimony of the deep interest felt in the United States for the service in which the ship was engaged when she was necessarily abandoned.

I have not failed to lay your letter and its enclosures before the Queen, and I have received her Majesty's commands to acquaint you, that she gratefully accepts the offer thus made of the restoration of the "Resolute" to her service. I beg to assure you that the friendly feeling on the part of the Senate and House of Representatives which prompted this measure, and the generous and complete manner in which it has been carried into effect by the President and his government, are most highly appreciated by the Queen and her Majesty's government, and, I am confident, by the British nation at large.

I request you, sir, to have the goodness to convey to the President,

and to request him to communicate to the legislature of the United States, the cordial thanks of the Queen and of the British government for an act of generosity and sympathy which will meet with a warm response in this country, and cannot fail to strengthen the kindly feelings which unite the people and governments of the two nations.

I beg to add, that the Queen has signified her intention to visit the "Resolute," off Cowes, on this day, in recognition of the munificence of the legislature and government of the United States, in restoring that vessel to her Majesty's service, and in compliment to the officers and crew who have brought her to this country.

I avail myself of this opportunity to renew to you the assurances of the highest consideration with which I have the honor to be, sir, your most obedient, humble servant,

CLARENDON.

NAVY DEPARTMENT, *November* 8, 1856.

SIR: The department has placed you in command of the "Resolute," recently fully repaired and fitted out by the United States, with a view to her restoration to the British government, in pursuance of a joint resolution of Congress, approved August 28, 1856.

You will, so soon as she is in all respects ready for sea, proceed to England, entering the port of Portsmouth. Leaving her there in charge of the officers under your command, you will proceed immediately to London, in order to advise with the American minister, Hon. George M. Dallas, to whom you will deliver the enclosed despatch from the Department of State. Accompanying these instructions, you will receive an open communication from this department to Sir Charles Wood, the first lord of the admiralty, who will, I presume, advise you as to the proper disposition of the ship, in the event of her Majesty's government accepting her. You will consult freely with Mr. Dallas, and will find it convenient to be guided in your movements by suggestions from one so peculiarly competent as he is.

When you have performed the duty assigned to you, you will make arrangements for the return of the officers and men, exercising all prudence and economy. Previous despatches have instructed you as to the mode of procuring funds to effect your purposes.

I am, respectfully, your obedient servant,

J. C. DOBBIN.

Commander HENRY J. HARTSTENE, *U. S. Navy,*
Commanding Barque Resolute, New York.

UNITED STATES NAVY DEPARTMENT,
Washington, November 8, 1856.

SIR: This communication will be delivered to you by Commander Henry J. Hartstene, of the United States navy, who goes to England,

in command of the "Resolute," under orders from his government, with a view to carrying into execution "a resolution authorizing the purchase and restoration to the British government of the ship 'Resolute,' late of the British navy," a copy of which I have the honor to enclose herewith.

The language of the preamble and the resolution so distinctly announces the considerations which prompted their adoption and approval as to dispense with their repetition and recital on my part. This very agreeable duty is performed by me, sir, with much pleasure. The ship has been thoroughly repaired, and has on board "all her armament, equipment and property," which has been preserved in good condition. In pursuance of the resolution, the President requests her Majesty's government to allow him to "restore the ship Resolute to her Majesty's service."

Commander Hartstene is ordered to deliver the vessel at any port and to any officer to be designated at the pleasure of her Majesty's government.

Accept assurances of high respect, &c., &c.,

J. C. DOBBIN,
Secretary of the Navy.

To the Right Honorable Sir CHARLES WOOD, *Bart,*
First Lord of her Britannic Majesty's Admiralty.

LONDON, *December* 19, 1856.

SIR: I have the honor to inform you that after a boisterous passage we anchored at Spithead on the 12th instant at half past two o'clock p. m., with the United States and British ensigns flying at the peak. Notwithstanding the furious gale which was then raging we were immediately boarded by Captain Peale, of her Britannic Majesty's frigate Shannon, who cordially offered to us every civility and attention. In a few moments afterwards a steamer arrived from Vice Admiral Sir George Seymour, (commanding officer of the station,) with a tender of services and congratulations upon our safe arrival. Proceeding to Portsmouth next morning, (which I did in a government steamer provided me for that purpose,) I visited the United States consulate, and was there waited upon by Sir Thomas Maitland, (who had become commanding officer of the naval station in the absence of the Admiral Sir George Seymour,) and received from him a most cordial welcome with proffers of every possible service, by express instruction from the admiralty. Accommodations were prepared for us at the first hotel, and orders for a bountiful supply of provisions to be sent on board the "Resolute;" also a carte blanche for the railroad to London for myself and the officers of the "Resolute." In fact nothing could exceed the kindness and courtesy with which we were treated by Captain Sir Thomas Maitland, who seemed unwilling that any means of adding to his hearty expressions of welcome should pass unexhausted. That morning's post brought me a communication from Sir Charles Wood, first lord of the admiralty, (which I herewith enclose,) whose expressions of kindly feeling I beg may be particularly noticed. At noon of the day after our arrival a royal salute was fired from

the "Victory," (flag-ship,) from the fortifications, and from the "Shannon," at Spithead. As soon as my official visits were made, I proceeded to London and delivered to the honorable Mr. Dallas, minister plenipotentiary and envoy extraordinary from the United States, the open communication committed to my charge by the department. In London, as well as in Portsmouth, I received the most cordial and pressing hospitalities; in fact scarcely an hour has elapsed without a proffer of courtesy and hospitality from municipal corporations, military authorities, scientific associations, clubs, &c., &c.; all of which I have politely declined, except an invitation to dine with Lord Palmerston; also one from Admiral Sir George Seymour, and one from the municipal authorities of Portsmouth.

Her Majesty the Queen expressing a wish to visit the "Resolute," and a desire that that vessel might be taken to Cowes, (near her Majesty's private palace,) I immediately acceded, and the ship was towed thither by the government steamer, escorted by two other steamers and her Britannic Majesty's steam-frigate Retribution. On the morning of the 16th, at 10 o'clock a. m., her Majesty the Queen, accompanied by his Royal Highness Prince Albert, the Prince of Wales, Princess Royal, Princess Alice, and several members of the royal household, visited the "Resolute." She was received with all honors. As her Majesty stepped on board, after being presented by Vice-Admiral Sir George Seymour, K. C. B., I welcomed her, and, from the impulse of the moment, and in obedience to what I conceived to be the feelings of my countrymen, I delivered the "Resolute" to her Majesty. After which I showed her Majesty all the objects of interest connected with the vessel, with which she appeared much gratified.

On the afternoon of the same day I received from the Hon. C. B. Phipps, C. B., (keeper of her Britannic Majesty's privy purse) a note, enclosing a check for £100, (one hundred pounds,) with a request from her Majesty that it should be distributed among the crew, which I accepted in their behalf. I enclose the note, also a letter from Admiral Sir George Seymour, K. C. B.

By favor of an invitation from her Majesty the Queen, I dined and spent the night at the palace of her Majesty, at "Osborne," where I was treated with the most distinguished attention. On the following morning (December 17th) the "Resolute" was towed up to the harbor of Portsmouth, escorted by her Britannic Majesty's steam-frigate "Retribution," and on arriving at her anchorage was received by another royal salute, and with such an outburst of popular feeling as was never known before.

I have this day received from Sir Charles Wood, first lord of the admiralty, an invitation (herewith enclosed) which could not be declined. I have, therefore, accepted it, and shall, as soon as it is agreeable to her Britannic Majesty's government, deliver up the "Resolute," and take advantage of their courteous tender of a passage to the United States.

Respectfully, &c.,

H. J. HARTSTENE,
Commander, U. S. N.

Hon. J. C. DOBBIN,
Secretary U. S. Navy, Washington D. C.

ADMIRALTY, *December* 12, 1856.

SIR: I have this moment heard by telegraph that the Resolute, which the government of the United States has, in a manner so gratifying to the feelings of this country, sent over under your command, is entering Portsmouth. I hasten to assure you of the satisfaction with which I have learned your arrival in this country, and of my anxiety to offer to yourself, your officers and crew, the warmest reception in my power.

Captain Sir Thomas Maitland, the senior officer at Portsmouth, in the accidental absence of the two admirals, will, I am assured, do everything in his power to show the spirit in which we are most anxious that you should be welcomed; and when we are apprized of your wishes and intentions as to your stay in this country and return to America, we shall be happy to meet them to the utmost.

This is not a fitting opportunity for saying anything as to the munificent conduct of your government, which will be the subject of communication between the governments of our respective countries. I am wishful at present to offer to yourself and your companions, personally, every civility and courtesy that the Board of Admiralty can command.

I have the honor to be, sir, your obedient and faithful servant,

CHARLES WOOD.

Captain HARTSTENE.

OSBORNE, *December* 16, 1856.

MY DEAR SIR: I have received the commands of her Majesty the Queen to request that you will have the goodness to distribute amongst the ship's company, who have brought the Resolute to England, a hundred pounds, for which I beg to enclose a check.

Her Majesty would wish this to be considered as a personal present from herself to the crew, and I am directed to request that you will use your own discretion as to the proportions in which it is to be distributed.

I have the honor to be, my dear sir, faithfully yours,

C. B. PHIPPS.

[Private.]

ADMIRALTY HOUSE,
Portsmouth, December 17, 1856.

MY DEAR SIR: I have received a note from Lord Palmerston, from Broadlands, his country residence, beyond Southampton, in which he says that he does not know how long you remain at Portsmouth, but if, during your stay, you will come over with me and dine at Broadlands, it will give Lord Palmerston great pleasure to receive us.

Will you have the kindness to enable me to reply to this invitation to-day about five o'clock, or before six.

I think you will find the visit our prime minister proposes an agreeable manner of making his lordship's acquaintance; and if you can name a day for the purpose I shall be happy to accompany you.

We can go by the railway from Portsmouth to Romsey, which is very near Broadlands.

I have received no direction about the arrangement for the transfer of the "Resolute," but I am disposed to think that less ceremony may be requisite hereafter, her Majesty's visit having conveyed a national compliment on the manner in which the vessel has been restored to this country by the United States.

I remain, dear sir, your very obedient servant,

G. H. SEYMOUR.

Captain HARTSTENE,
United States Navy.

ADMIRALTY, *December* 18, 1856.

DEAR SIR: I have the honor to acknowledge the receipt of your letter of this day's date, informing me of the Resolute's being in Portsmouth harbor. I have also received the letter from the Secretary of the Navy of the United States, communicating to me the resolution of Congress, in pursuance of which the government of the United States has so liberally presented that ship to her Majesty, and sent her over to this country under your command.

I shall have the honor of addressing the Secretary of the Navy in acknowledgment of his letter.

You are good enough to say that you are ready to deliver the Resolute in any manner which may be deemed advisable, and I have only to say that orders will be given to Vice Admiral Sir George Seymour, the commander-in-chief, at Portsmouth, to make such arrangements for receiving her as may be most convenient to yourself, your officers and crew. It will probably render the arrangements more suitable to your wishes, if you would have the goodness to communicate with him on the subject.

I have also to propose to you that you should return to the United States in one of her Majesty's ships, which I shall be ready to order on this service whenever it suits your convenience to leave this country, if you accept my offer. I am anxious to show, by every means in my power, the sense that we entertain of the generous conduct of your government, and to offer every courtesy to yourself, your officers and crew. I am anxious, also, that we should endeavor to promote the good and friendly feeling between the United States and this country, to which on all occasions the conduct of the naval officers of both countries has so much contributed.

The frigate in which I propose to convey you to any port in the United States which you prefer is ready for sea, and would only require filling up with coals, but will of course wait for any time you may wish to spend in this country.

I have the honor to be, dear sir,

Your obedient and faithful servant,

CHARLES WOOD.

Captain HARTSTENE,
United States Navy.

34TH CONGRESS, 3d Session. } SENATE. { Ex. Doc. No. 25.

MESSAGE

FROM

THE PRESIDENT OF THE UNITED STATES,

COMMUNICATING,

In compliance with a resolution of the 4th of August last, and the 9th of January, inst., information respecting the Aves or Bird Islands, and the interference of the Venezuelan government with the rights of American citizens collecting guano therefrom.

JANUARY 20, 1857.—Read, referred to the Committee on Foreign Relations, and ordered to be printed.

To the Senate of the United States:

In compliance with the resolutions of the Senate of the 4th of August, 1856, and 9th of January instant, I transmit herewith a report from the Secretary of State, together with the documents therein referred to.

FRANKLIN PIERCE.

WASHINGTON, *January* 12, 1857.

DEPARTMENT OF STATE,
Washington, January 12, 1857.

The Secretary of State, to whom were referred the resolutions of the Senate, dated, respectively, 4th August, 1856, and 9th January, instant, requesting the President, if in his opinion not incompatible with the public interest, to communicate to the Senate the correspondence relating to the claims of certain American citizens for their expulsion from one of the Aves islands by the Venezuelan authorities, and for their losses consequent thereupon, has the honor to lay before the President the documents mentioned in the subjoined list.

Respectfully submitted,

W. L. MARCY.

To the PRESIDENT *of the United States.*

Documents transmitted.

18. Same to same, January 2, 1857.

Messrs. Lang and Delano to Mr. Cushing.

BOSTON, *August* 29, 1854.

SIR: Herewith we take pleasure in handing you a letter introductory of our firm, from our friend, Mr. Henry J. Wilde, and advising the purport of our letter. About one year since, a master of one of our vessels advised us that, in passing through the Caribbean sea, he had landed on an uninhabited island, where he saw an immense quantity of birds, and he judged the island itself was composed of guano.

We despatched a vessel for that island, but for some reason, probably that the master was unacquainted with the article, she failed to obtain any. In June last, however, we sent two vessels in search of guano islands in the Caribbean sea, ordering them first to the Isle de Aves, situated in 63° 42′ west longitude, 15° 30′ latitude north, and there they found the article of Mexican guano.

In one of the vessels we sent a Mr. Charles H. Lang, brother to our Mr. L., ordering him, in case he should find the guano, to remain on the island with some of his men, and to keep possession of the island for us, under the American flag. This has been done, and Mr. Lang is now on the island.

We have already received two small cargoes, and have just despatched several vessels to obtain other cargoes.

This island has a coral foundation, is about three-quarters of a mile in length, and one-fourth of a mile in breadth, and, as nigh as can be estimated, has about 30,000 to 50,000 tons of guano upon it. We

also enclose to you an analysis taken from a sample of a small cargo of 50 tons, received from this island by us about a week since, by Mr. A. A. Hayes, our State chemist. The island, we believe, is about 100 miles from the nearest land, which is Montserrat, and the next the island of Guadaloupe. We have been at much labor, trouble, and considerable outlay of money to find and get possession of this Island de Aves, and we would thank you if, at your convenience, you would inform us if we have the right to retain possession of it, and if we can be supported in that right by our government, and if we can obtain the necessary documents authorizing us to retain possession.

During the loading of one of our vessels at the island, they were visited by one of her Britannic Majesty's steam-frigates, who was in search of a pirate, and the commander advised our agent that he had a perfect right to retain possession, under the American flag, for his principals.

Trusting, sir, that we do not trouble you too much, and that you will advise us at your earliest leisure, we are, very respectfully, your most obedient servants,

LANG & DELANO.

Hon. CALEB CUSHING, *Washington.*

Mr. Marcy to Messrs. Lang & Delano.

DEPARTMENT OF STATE,
Washington, September 12, 1854.

GENTLEMEN: The Attorney General has referred to this department your letter to him of the 29th ultimo, in which you ask if you have a right to retain possession of one of the Aves islands in the Caribbean sea, which you claim to have discovered; if you can be supported in that right by this government, and can obtain the necessary documents authorizing you to retain possession.

In reply I have to inform you that it is possible, but not certain, that your agent to whom you refer may have discovered guano on the island adverted to. Inasmuch, however, as the cluster of islets to which it belongs is called on the maps Aves or Bird islands, it is quite probable that they must long since have been discovered and named by Spaniards, but, it is presumed, were not considered desirable as a settlement. Probably for this reason, neither the Spanish government or Spanish subjects thought proper to claim or retain possession of them, and their only value may be derived from the guano upon them. This is an article which, as you are aware, has not become of general commercial importance until within a few years.

It is not incumbent upon the Secretary of State to answer questions relating to hypothetical cases. If the authorities of any foreign government should attempt to prevent or interfere with you in removing guano from the Aves islands, they will be expected to assign sufficient reasons therefor. Meanwhile, your request for documents

for the purpose of substantiating your claim cannot be complied with. The only course which can be suggested for you in this respect would be for you to have the depositions of the persons in your employment, who, you say, made the discovery, legally and formally taken, *in perpetuam memoriam*, to be used when required.

I am, &c.,

W. L. MARCY.

Messrs. LANG & DELANO, *Boston*.

Mr. Marcy to Mr. Eames.

[No. 12.]

DEPARTMENT OF STATE,
Washington, January 24, 1855.

SIR: The copies of the letters herewith sent to you supersede the necessity of a detailed statement of the facts in the case to which your attention is now called. It is not necessary to inquire who were the first discoverers of the island in question, for that fact of itself, unaccompanied by others, would give no right to dominion over it. The Aves islands have been known probably more than three hundred years, but have ever been regarded as uninhabitable and valueless. No nation has deemed them of sufficient importance to be reduced to possession. As we understand the case, they were not embraced within the sovereignty of any power, but were derelict. While in this state, American citizens discovered that on one of them there was a deposite of guano of some value, and they took actual possession of it. Their right to retain it was, in our opinion, good against the whole world, and they could not be rightfully disturbed by any power. But it now seems that Venezuela has forcibly driven them away, under some claim of sovereignty over the island. This act has resulted in a serious injury to them; and they have, as you will perceive by the correspondence, applied for the interposition of this government to assert their claim against Venezuela for molesting them and breaking up their business. You are instructed to bring this case to the notice of the Venezuelan government. Before making it a matter of discussion, it is advisable to get all the information your situation will enable you to acquire in relation to the pretended title of that government to the sovereignty of these islands, and particularly the one from which our citizens were driven. If we are not misinformed, Venezuela has had no actual possession of that island—no military or civil establishment thereon, and no continued occupancy by its citizens. She has exhibited to the world no such manifestations of ownership as any other nation is bound to recognize or respect. She certainly can found no plausible pretext to claim it as her own by reason of its proximity to any of her acknowledged territories. Other powers have possessions much nearer to it than any of hers.

Unless Venezuela has the rightful sovereignty over that island, the act of her authorities in disturbing our citizens in their occupations there was wrongful, and gives them a just right to indemnity. I

wish you would explore as far as you can the motives of this conduct on her part. It is important to know whether public policy or private speculation has led her into this harsh procedure against our citizens.

If the result of your examination should satisfy you that Venezuela has no fair title to the sovereignty of the island in question, you will present the case strongly and clearly to her government, and give notice that this government expects that our citizens will be indemnified for their losses, and hereafter allowed a free, unmolested access to, and a peaceable occupation of, that island.

I am, sir, respectfully, your obedient servant,

W. L. MARCY.

CHARLES EAMES Esq., *&c.*, *&c.*

Mr. Eames to Mr. Marcy.

[Extract.]

[No. 9.] LEGATION OF THE UNITED STATES,
Caraccas, April 7, 1855.

SIR: I have the honor to acknowledge despatches from the department to No. 15, inclusive, with their several enclosures.

No. 12, referring to the case of the Aves islands, and the claim of Messrs. Sampson & Tappan, and Messrs. Lang & Delano, arising out of the occupation of that rock in December last by the naval forces of this government, was received by me about the middle of last month, and has since engaged much of my attention. I shall communicate to the department the result of my investigations by the next opportunity, which will occur in a very few days.

* * * * * * * *

I have the honor to be, with the highest respect, your obedient servant,

CHARLES EAMES.

Hon. W. L. MARCY,
Secretary of State, U. S.

Mr. Eames to Mr. Marcy.

[No. 10.] LEGATION OF THE UNITED STATES,
Caracas, April 26, 1855.

SIR: In my last despatch, under date of 8th instant, I had the honor to inform the department that my careful attention had been given to its instruction No. 12, then recently received, and relating to the claim of Messrs. Sampson & Tappan, and Delano & Lang, for indemnification of loss occasioned to them by the occupation, in December last, of the island of Aves, by the naval forces of this government.

Under that instruction it became my duty, before entering upon a formal discussion of the subject, to examine the right of this government, if any such right existed, to the dominion or possession of that

island rock at the time when the act of occupation took place. I soon became satisfied that this government had no such right. I am confident that there is not a particle of proof that either by the government of Venezuela since its establishment, or by that of the Columbian republic, of which Venezuela was a portion, or by that of the captain-generalship of Caracas, which included the whole of the territory of Venezuela while under Spanish rule, was there ever put forth any pretension whatever to the sovereignty or possession of this island of Aves. I deem it certain that until late in November last, about one month before the act of occupation, this government did not know the geographical position of the island, and did not recognize nor remember its existence.

That the island has always been considered by all governments as *derelict* is perhaps not quite so certain. A note has been confidentially shown to me, addressed by the French minister of foreign affairs, Mr. Drouyn de L'Huys, to the French legation here, under date of 15th ultimo, in which he states that he does not understand what claim Venezuela can have to the island, and that the government of France does not intend to assert any claim to it. But this note is in answer to various communications addressed to the French government, both by the French legation here and by the governor of the French island of Guadaloupe, making claim to the island of Aves as a natural, and, in fact, a geological appurtenance of Guadaloupe. On the other hand, I have before me a copy of a note addressed to this government, under date of 3d ultimo, by the Dutch chargé d'affaires here, in which he claims the island of Aves as a part of the Dutch possessions in the Antilles, pertaining to the neighboring Dutch islands of Saba and St. Eustace, and well known as a place of immemorial and uninterrupted resort (amounting, as he alleges, to exclusive occupancy) of Dutch fishermen from those islands. In support of his pretension, he cites a considerable array of geographical and other authorities, and concludes by demanding the prompt evacuation of the island by the Venezuelan authorities and its restoration to Holland.

Such being the state of the case as to the Venezuelan pretension to the jurisdiction of the Aves island, I sought in the next place, in pursuance of your instructions, to ascertain the motives which induced the recent sudden occupation of it by the Venezuelan forces. It appears that, about the middle of last November, this government first heard from its chargé d'affaires in the United States, Mr. Aspurua, that American citizens were taking away guano from various islands and island rocks on the coast of Venezuela. Among these was mentioned the island of Aves, but both Mr. Aspurua and his government, as I am informed, supposed the Aves then named to be not the island now in question, but another of the same name which lies very near to the Venezuelan coast and in the immediate vicinity of Curaçoa. These reports, however, produced no movement by this government to disturb the Americans who were at work on the distant Aves island now in question, and probably would have produced none had not an opportunity presented itself for this government to realize a very considerable sum of money at once by its occupation.

About the 23d of November last, Mr. J. F. D. Wallis, an American citizen, acting both for himself and for certain gentlemen of Philadelphia associated with him in his enterprise, arrived here, and at once entered into negotiations, which resulted in the signature of a contract, under date of 21st December, with this government, by which is conceded to him and his associates the exclusive privilege, for fifteen years, of taking away guano from the island of Aves in question, (specifically described by its latitude and longitude,) and from all other islands belonging to Venezuela where guano has been or may be found. This privilege thus granted is, however, limited by an express stipulation, that if, at any time before the expiration of the said fifteen years, Venezuela shall, from any cause whatever, lose or forfeit the right which she now has to the said islands, or any of them, then the said privilege shall wholly cease in the places so lost or forfeited, without any claim whatever to indemnification thereby accruing to the grantees. In consideration of the privilege thus granted, the grantees promise to pay to Venezuela four dollars (Venezuelan currency) per ton for all the guano they shall take away from the said islands; and on account of the amount which this government will thus have to receive, Wallis agrees to draw drafts on John Tucker, of Philadelphia, for the sum of two hundred thousand dollars, at ninety days' sight; and it is stipulated, that the privilege granted by the government shall in no way be exercised till the said drafts shall have been fully paid; and that if the said drafts shall be protested, or not paid at maturity, then, by that fact alone, the whole contract shall become null and void. The grantees further bind themselves to station and maintain at the island, at their sole expense, three large vessels, well armed and equipped, in order to guard the island, and prevent fraudulent exportation of the guano; and the said vessels shall take the Venezuelan flag, and in the event of a revolution here, shall be placed under the command of Venezuelan officers, and with their crews, armament, and equipage, shall be subject to the orders of the Venezuelan government during the continuance of the revolution; and this without any compensation for the services which they may render! The contract also becomes null at the expiration of six months from the day of the payment of the said drafts, if the exportation of the guano shall not have been within that period commenced.

In pursuance of this very singular contract, which I have seen, and a full abstract of which is before me—I have given above only its principal provisions—the drafts for $200,000 were drawn by Wallis on the 25th of December last, and news has just reached here that they have all been protested for non-acceptance in Philadelphia. But, within a few days after receiving them, this government passed them over to three commercial firms here, all foreigners, none of them Americans, and all engaged for some time past in money dealings with this government. By this operation this government realised in cash $100,000, the rest of the face of the drafts being paid by the purchasers in government paper, of which there is abundance afloat. It is stipulated between the purchasers of the drafts and this government, that in the event of the non-payment of the drafts, or the failure of the contract with Wallis by any cause, the said purchasers of the

drafts shall at once be substituted in place of the original grantees, and become the possessors of the whole privilege as originally granted. There is no expectation here that the drafts will be paid, and the purchasers say that they have had the guano on the Aves analyzed, and that they do not regard the privilege as of any considerable value. Whether this be their real opinion or not, they have taken abundant *additional* security against loss in their transaction with this government.

I have permitted myself to go into these details in this despatch by reason of the expressed wish of the department that I should sift the nature of the transaction and the motive which induced this government to occupy the Aves. There is, in my judgment, ground to believe that the act of occupation took place as a necessary condition precedent to the drawing of the drafts. The occupation took place on the 13th of December, just in time to be known here on the day when the contract was signed—that is, the 21st of the same month—the drafts being drawn and delivered four days afterwards. It is currently reported that high official men here, then in power, were to share in the profits of the contract. No fact has come to my knowledge which makes this statement improbable.

I had already learned most of these facts when, in the last days of last month, shortly after the receipt of your instruction, I brought the matter to the attention of this government. I preferred to do this first in conversation, for I had heard something to the effect that the Americans on the island had, upon the arrival of the Venezuelan vessels there, signed a contract recognizing the jurisdiction of Venezuela, and assenting to the act of occupation. I concluded at once from the terms of your instruction and its enclosures, that if any such document were in existence, it had not been communicated to the department, and I thought it best not to commit my government in writing upon a case where a fact, which might turn out to be very material, had been withheld from its knowledge, or at least omitted by the claimants in the statement which invoked its interposition in their behalf.

I therefore, in a personal interview, placed before the minister of foreign relations, as distinctly as possible, the main facts of the case, as presented in your instruction and the accompanying papers, expressing my astonishment at the course pursued by Venezuela, and stating my expectation that the wrong would be at once recognized and repaired.

In reply, the minister at once, and very confidently, denied that any wrong had been intended or done, and that any reparation could be properly claimed. He insisted that the occupation by private individuals not acting for any government, and that the private possessory rights acquired by them, were always in subordination to the rightful eminent domain of any government; that the island at the time of its occupation by Venezuela was either Venezuelan, derelict, or Spanish, by right of first discovery; that if Venezuelan, there was an end of the question; that if *derelict*, the act of Venezuela in first taking possession and establishing jurisdiction was entirely legal and her right of actual possession absolutely perfect until previous or better

adverse possession *by some government* could be shown; that, if the island were Spanish, the question arising out of its present occupancy by Venezuela was between Venezuela and Spain.

I expressed strongly my dissent from these opinions, and intimating quite clearly that I did not think the *title* of Venezuela at the time of the occupation worth discussing, I enforced again the perfect right of *private property* in the guano which the claimants had established and were sedulously maintaining when Venezuela found them. This brought the minister to the point which I desired him to touch, and he replied that American citizens had themselves fully admitted the right of Venezuela and had entered into a contract with her upon that assumption. I told him I was aware of the Wallis contract, and also aware that Venezuela had inserted a clause plainly showing a consciousness that the island was not hers, by refusing to guaranty the privilege she conceded. I added that he must see that the admissions of Mr. Wallis had really nothing to do with the claim now presented, nor with the question between the two governments. He rejoined, that I should find the admissions of all the parties concerned, very complete, and then added that it was hardly worth while to go further into the case in conversation, and that if I would address him a note he would answer it and show me that he was right. I said, as we parted, that I very much regretted to find so wide a difference of opinion between us upon a matter which, as it stood before me, appeared so serious. But I felt, as I left him, well assured, that anticipating a discussion in writing, he considered he had an impregnable case against the claim and was reserving his fire.

Soon afterwards, and while I was still seeking to ascertain the exact nature of the *admissions* which I should have to encounter in prosecuting the reclamation of the claimants, there was put into my hands by a merchant here a paper which purported to be a copy of an agreement entered into and signed at the island of Aves, on the 13th of December last—the day of the occupation—by Domingo Dias, the Venezuelan naval officer, of the one part, and of the other part by Nathan P. Gibbs, agent of Sampson and Tappan, and Philo S. Shelton, and Charles H. Lang, agent of Lang & Delano. It appeared that Dias, on his return to Venezuela, had made known the existence of this paper; and that, in an early stage of the business, the minister of foreign relations had somewhat inadvertently permitted a copy to be taken. I transmit herewith a copy of this paper in the original Spanish, marked A, together with an exact translation of it, marked B. The department will perceive that in this paper the agents of the claimants expressly declare that the island belongs to Venezuela; that they agree to defend and guard the Venezuelan occupation of it; and that for this purpose they place all their arms and force under the orders and the flag of Venezuela. And this they do for the double consideration, first that they may complete the loading of their vessels actually taking in cargo, and secondly that they shall continue taking away guano for a period of indefinite and contingent duration, depending on the good pleasure of the Venezuelan government. The fifth and last article of the agreement, though not very clearly expressed, seems to imply that, as a further

consideration, the claimants, by their agents, rely upon the protection of the Venezuelan officer and force to shield them from disturbance of any armed cruisers of any government which may visit the island. Upon comparing this paper with the documents accompanying your instruction, which purported to invoke your interposition upon a full narration of the very events of which this paper forms so material a portion, the first inclination of my mind was either to doubt its genuineness or the accuracy of the copy in my hands. I therefore took an early opportunity to have another interview with Mr. Aranda, in which I informed him that I had what purported to be a copy of one of the papers in the case, which, at this stage of business, I wished to compare with the original. He at once assented, though he could not understand how a copy should have got out, and at a subsequent day placed the papers in my hands for examination. I found the original there, to all appearance an authentic paper, and upon comparison my copy proved to be exact. I then asked Mr. Aranda if he was satisfied of the genuineness of the original, and he replied that there could be no doubt of it.

With these facts before me, I find myself unable to resist the conviction that the case of the claimants is clothed by this paper with a character very different from that in which they brought it to your notice, and upon which your instruction was framed. If the case were one of a conflicting claim between the two governments to the eminent domain of the Aves, this agreement I should consider of no force whatever. But the case being a reclamation of private citizens for indemnity and restoration, I cannot avoid the conclusion that the claimants themselves have, by this act of their agents, if left unexplained, greatly embarrassed their government in its successful prosecution. At all events, there can be no doubt that the agreement of the claimants is regarded by the Venezuelan government as an effectual bar to any claim for indemnity by them or in their behalf.

In this state of facts, I deem it proper to refer this new matter in the case to the department, in order to learn the view which you take of its bearing upon the further prosecution of the claim. I am the more induced to adopt this course, because, considering the date of this agreement, I see no reason to doubt that it was known to the claimants when they presented their case to you on the 15th of January last, and I cannot understand what is their justification for not then bringing it to your attention with whatever explanation of it might be in their power. It is proper to add, however, that I have, of course, made no admission whatever to this government as to the paper or the operation of it, and that when I receive your views of it, and of the case as affected by it, I shall be prepared to carry your instructions at once into effect.

I have the honor to be, with the highest respect, your obedient servant,

CHARLES EAMES.

Hon. WILLIAM L. MARCY,
Secretary of State of the United States.

B.

Domingo Dias, captain of a ship-of-war, and second chief of the Venezuelan navy, and commissioned by the supreme government of the republic to watch the desert Antilles that belong to it in the Caribbean sea, has agreed, subject to the approbation of my government, that Messrs. Charles H. Lang, (agent of the company of "Lang & Delano," of Boston,) and Nathan P. Gibbs, (agent of that of Sampson, Tappan & P. S. Shelton, also of Boston,) whom I have found extracting guano from this island, may:

1. Continue to load the vessels that are actually taking in cargo.
2. They may continue to load until the arrival of the company with whom the government has entered into contracts, or until the arrival of the approbation or disapprobation of the supreme government.
3. And we, Charles H. Lang and Nathan P. Gibbs, engage to lend the aid that the garrison of the island may require.
4. And to that effect we place our pieces of artillery and armament at the orders and under the Venezuelan flag, to which the island belongs; and,
5. I, Dias, second chief of the Venezuelan navy, do order the commanders of men-of-war cruising in the Antilles to respect the concession until the supreme government may dispose otherwise.

NATHAN P. GIBBS.
CHARLES H. LANG,
Agent for Lang & Delano, Boston.
DOMINGO DIAS.

ISLAND OF AVES, [*to windward,*]
December 13, 1854.

Mr. Marcy to Mr. Eames.

[Extract.]

[No. 15.] DEPARTMENT OF STATE,
Washington, June 20, 1855.

* * * * * * * *

It is, however, proper to remark that, apparently, the primary object of the contract made by Wallace was to secure the guano on the Aves island, which was at that time in the actual occupancy of other American citizens. It is probable that we shall ultimately take and maintain the positions: That Venezuela had no right to that island; that she committed a wrong in forcibly dispossessing our citizens who were on it; and that she is justly bound to indemnify them. You will, consequently, forbear to do or say anything in favor of the Philadelphia company which will in any way affect the claim for this injury. The contract embraces other islands, which are supposed to belong to Venezuela, on which it is confidently asserted that there

are rich deposits of guano. So far as the contract relates to these other islands there is no objection to your using your good offices in behalf of the company. You can assure Venezuela that both the people and government of the United States take a deep interest in the subject, and would exceedingly regret a course, on her part, that would result in a loss and injury to our citizens, who are now interested in the contract made with Wallace.

* * * * * * * *

CHARLES EAMES, Esq., *&c.*, *&c.*, *&c.*

Mr. Eames to Mr. Marcy.

[No. 12.] LEGATION OF THE UNITED STATES,
Caracas, August 1, 1855.

SIR: * * * * * * *

I transmit herewith to the department copies of two notes, with their respective enclosures, under date of 28th ult., just received from the minister of foreign relations, in reference to the several guano deposits claimed as belonging to this republic.

The first of these notes communicates a resolution of the executive power of this government under date of 26th ult., manifesting that having declared null and void, by reason of *illegality*, the contract entered into by the late administration with J. F. D. Wallace, under date of 25th December, 1854, in respect to guano on the Aves and other islands belonging to this republic, the executive power is now engaged in framing regulations under which both citizens of Venezuela and foreigners of all nations will be permitted, on equal terms, to take part in the exportation of such guano. In the second of these notes, the minister of foreign relations transmits to this legation, at the instance of the minister of the treasury, copy of a communication addressed by that functionary to the department of foreign relations, under date of 23d ult., which, after setting forth that various foreigners, residing within or without the limits of the country, are, without due license, and after its refusal, exploring certain of the guano islands of the republic; and, also, that vessels have sailed, and continue sailing, from foreign ports, in order to load with the guano found on such islands, without touching at any of the ports of entry of the republic, or paying to the government the value of the article, proceeds to declare that the executive power has issued peremptory orders to the armed vessels of the Venezuelan navy to watch the said islands, and to execute the rigor of the laws against such trespassers; all of which is made known to the department of foreign relations in order that it may be communicated to the foreign legations here with a view to the prevention of such illegal operations.

I have heard nothing of any proceedings under these orders having yet taken place against any foreign vessels. The Venezuelan occupation of the "Aves" still continues, and the claim of Holland to that island, of which I made mention to the department in my despatch

No. 10, continues to be urged, though, as I understand, without the allegation of any new grounds and without any result. The Dutch chargè d'affaires, however, recently informed me that it is the purpose of his government to persevere in its claim. On the other hand, I have lately seen a note addressed by the British chargè d' affaires to this government a few weeks since, in which the *occupation* of the Aves by Venezuela is referred to as constituting a ground of title, and which claims for British subjects the same facilities for taking away the guano there as may be allowed to those of the most favored nation.

My despatch No. 10 to the department, under date of 26th April last, contains an account of the contract with Wallace, which this government now declares null and void. By its terms that contract was to cease upon the protest or non-payment of the bills of exchange drawn by Wallace on Mr. J. Tucker, of Philadelphia. Those bills were protested for non-acceptance, and the news reached here in April last. They have since been protested for non-payment; but this government does not appear to place its abrogation of the contract upon this ground, which might have substituted the purchasers of the bills in place of the original contractors, but upon the allegation that some of its stipulations are repugnant to the laws and the constitution of Venezuela. It is currently said here that the interposition of the government of the United States has been, or will be, invoked by the contractors to sustain the validity of the contract. * * * *

I have the honor to be, with the highest respect, your obedient servant,

CHARLES EAMES.

Hon. WILLIAM L. MARCY,
Secretary of State.

REPUBLIC OF VENEZUELA—DEPARTMENT OF FOREIGN RELATIONS.

CARACAS, *July* 28, 1855.

Of the Law the 26th—of the Independence the 45th year.

The secretary of foreign relations of Venezuela has the honor of transmitting to the Hon. Mr. Charles Eames, minister resident of the United States, a copy of the decision made this day by the executive power, as to the mode in which the guano islands of the republic shall be administered; and this for the purpose therein expressed, after declaration that the contract entered into on the 25th of December, 1854, no longer exists, on account of its contravening the laws of the republic.

The undersigned renews to Mr. Eames the assurance of his distinguished consideration.

FRANCISCO ARANDA.

Hon. CHARLES EAMES,
Minister Resident of the United States.

REPUBLIC OF VENEZUELA—DEPARTMENT OF FOREIGN AFFAIRS.

CARACAS, *July* 28, 1855.

Of the Law the 26th—of the Independence the 45th year.

Resolved, The executive power having declared that the contract made on the 25th of December, 1854, with Mr. J. D. F. Wallace, in relation to the taking out of guano which is found in Aves island, and other islands of the republic, is null, in consequence of its containing terms and conditions opposed to her laws; that he now has it for his purpose to administer said islands, in conformity with regulations which he is now engaged in establishing, and in virtue of which both Venezuelans and foreigners, of what nation soever, will be permitted to take part in the exportation of the guano, by submitting themselves to the rules which may be laid down for all, without discrimination; and as it is expedient that foreigners who may be disposed to avail themselves of the privilege should be informed of the fact, let this be transmitted to the legations accredited to Caracas, for their information, and with the view that they may disseminate a knowledge of it among the citizens of their respective countries.

By his Excellency, ARANDA.

A true copy: ARANDA.

REPUBLIC OF VENEZUELA—DEPARTMENT OF FOREIGN RELATIONS.

CARACAS, *July* 28, 1855.

Of the Law the 26th—of the Independence the 45th year.

SIR: I have the honor, at the request of the secretary of the revenue, to transmit to you a copy of an official communication addressed to this department, by which it is informed of the measures which the government has adopted to keep up due vigilance along the coasts of the islands of Venezuela where guano exists, in consequence of some depredations therein committed by certain foreigners. This for your information and all other relative ends.

With sentiments of distinguished consideration, I am your obedient servant,

FRANCISCO ARANDA.

Hon. CHARLES EAMES,
Minister Resident of the United States.

REPUBLIC OF VENEZUELA—SECRETARYSHIP OF STATE, DEPARTMENT OF THE REVENUE.

[Sec. 4.] CARACAS, *July* 23, 1855.

To the Secretary of State, Department of Foreign Relations:

Positive information has established the fact that various foreigners, residing in the country or out of it, have, by themselves or through

their agents, without due permission, which has heretofore been denied to their applications, been visiting and exploring some islands which are national property, and in which the substance known under the name of guano exists, or is supposed to exist; whilst additional information has been obtained that vessels have sailed, and that they continue sailing, from foreign ports to load with said substance, without touching at any of the ports of entry of Venezuela, and without due permits from the executive power, and without previous payment of the value of the article to the State. As it is neither the duty nor the inclination of his excellency to view with indifference these and other abuses violative of the dignity and sovereignty of the republic and detrimental to its treasury, positive orders have been issued to the armed vessels of the national navy to keep a vigilant watch along the coasts of said islands, to compel respect for the laws of Venezuela in relation to seizures and other penalties, and to deal with all delinquents and defrauders with the full rigor which those laws prescribe. This I have the honor of communicating to you, in order that, should it be deemed convenient, you may transmit it to the respective ministers and chargés of friendly nations, so that they may warn their countrymen to abstain from this unlawful action and traffic, which the government has resolved to suppress.

Your obedient servant,

JACINTO GUTIERREZ.

A copy:

ARANDA.

Mr. Marcy to Mr. Eames.

[Extract.]

[No. 18.] DEPARTMENT OF STATE,
Washington, September 10, 1855.

* * * * * * * *

As at the date of your last despatch you had not received my communication of the 20th June, No. 15, in relation to the guano contract of the Philadelphia company, I forbear making any observations upon the attitude of the Venezuelan government in respect to that contract until the result of your efforts under the instruction referred to shall be known.

It may be interesting to you to peruse, and possess for reference, the printed copy of Mr. P. S. Shelton's memoranda in reference to his claims upon the Venezuelan government, which I herewith enclose.

I am, sir, respectfully, your obedient servant,

CHARLES EAMES, Esq., *&c.*, *&c.*, *&c.*

Mr. Eames to Mr. Marcy.

[No. 13.] LEGATION OF THE UNITED STATES,
Caracas, October 15, 1855.

SIR: I have the honor to acknowledge the receipt, by the hands of Mr. Pickrell, of despatches from the department, Nos. 15 and 16, and subsequently of No. 17, with the box of public documents to which it refers.

Concurring entirely with the view taken by the department of the public and even national importance of the American rights and interests in the guano islands of Venezuela, and of the wrongful and injurious consequences which must result to our citizens who are assignees of the Wallace contract from its abrogation by this government, I did not fail, in compliance with the instructions contained in your No. 15, to aid, to the best of my ability, by my good offices and influence with this government, Mr. Pickrell, the agent and representative of those assignees, in the endeavor to protect and save their rights under that contract. Of the successful result of that endeavor you will doubtless, before the receipt of this despatch, have been exactly informed by Mr. Pickrell, who left this city for Washington a few days since, bearing with him a new contract, which he regarded as entirely satisfactory to those whom he represented, and which certainly secures all the advantages and avoids the inconvenient and embarrassing stipulations of the Wallace contract, to the annulment of which Mr. Pickrell consented on the part of those interested. In view of the circumstances of the negotiation of this new contract, of the national importance of its subject-matter, and of its admitted character as a remedial and protective measure to avert the injurious consequences to all concerned of a previous repudiation by Venezuela of a solemn agreement, I cannot doubt that this government feels, both in sound policy and in good faith, fully bound to abide by it, and scrupulously fulfil its stipulations.

I have the more satisfaction in communicating the success of this effort to protect the rights of our citizens to the department, because I entertain no doubt that after the abrogation of the Wallace contract by this government, in May last, movements were immediately set on foot here by which, but for the result of this negotiation, the guano on the islands of this republic, so easy of access to the United States in comparison with those of Peru, would in all probability have practically passed into European hands, and thus have been to a great extent lost to the agricultural interests of the United States. It is proper to add, in this connexion, that the British chargé d'affaires near this government did not hesitate to make known his opposition to any guano contract with an American company, in a note to the minister of foreign relations of this government, on the ground that, by the resolution of the executive power, under date of 26th July last, (a copy of which was communicated to the department in my No. 12,) this government was inhibited from making any such contract. This very singular and untenable view of the effect of that resolution was sustained by him on the mistaken idea that the reso-

lution itself is, in fact, an agreement with foreign powers, and especially with England, instead of being, as it is on its face, a gratuitous act on the part of this government, revocable at its discretion, and in its terms looking to the future adoption and publication, by the executive, of further regulations upon the subject, before any action can properly take place under it. Having conversed with the chiefs of the French and Dutch legations here, I do not find that they concur at all on this subject with the representative of the British government, nor have I heard from them any objection whatever to the American contract. Indeed, it is manifest enough that the resolution, instead of being any bar to the formation of such a contract as that entered into with Mr. Pickrell, is in itself wholly unauthorized and improper, as being in violation of the rights previously vested in American citizens under the Wallace contract.

In the course of the negotiation, I found it expedient to obtain an audience of his excellency the president of the republic, in order to submit to him personally the views upon the subject which I had already in repeated interviews urged upon the attention of his ministers. I transmit herewith a note addressed by me to Mr. Aranda, recapitulating the substance of what took place at that interview, in which the department will perceive that, while giving due force to the weighty considerations of public policy which demanded from this government a just and fair course towards our citizens interested in the Wallace contract, I not only, in compliance with your instruction, reserved, in the most clear and emphatic manner, all the rights and claims of the American citizens who were found in possession of the Aves island by the Venezuelan authorities on the 13th of December, but I took care, also, to put on record my reiterated declaration, that no act or word of mine in rendering my good offices in aid of the rights and interests represented by Mr. Pickrell should be considered as in any way affecting or impairing the anterior claim of those citizens to full reparation; in regard to which anterior claim I repeated to his excellency my confident conviction that it would be effectually sustained by the government of the United States.

I am, sir, with the highest respect, your obedient servant,

CHARLES EAMES.

Hon. W. L. MARCY,
Secretary of State of the United States.

LEGATION OF THE UNITED STATES,
Caracas, September 24, 1855.

SIR: The undersigned, minister resident of the United States, has the honor now to communicate in writing to the honorable minister of foreign relations the substance of the observations which the undersigned recently had the honor to address to his excellency the president of the republic, in the presence of the honorable ministers of foreign relations and of the hacienda, in an audience solicited by the undersigned, for the purpose of making known to the government of

Venezuela the views of the government of the United States in regard to what may be called the question of the guano islands.

Upon that occasion the undersigned first briefly recapitulated the proceedings which had taken place respecting the guano islands in question, referring to them as matters already within the knowledge of his excellency, and including in the reference the previous occupancy of the island of Aves by American citizens in the early part of last year, the undisturbed continuance of that occupancy until the 13th of December last, their then forcible dispossession by the naval force of the Venzuelan government, their consequent claim for redress presented in their behalf by the government of the United States, and brought by the undersigned to the notice of the Venezuelan government, through the minister of foreign relations, in April last; the conclusion of the Wallace contract by Venezuela in December last, its annulment by the executive power of Venezuela a few months thereafter; the refusal of the American citizens interested in that contract to assent to that proceeding of Venezuela; their consequent present claim for the maintenance of their rights under that contract, either by its faithful execution on the part of Venezuela, or by the substitution of some other acceptable agreement of like effect in its place; their application to the government of the United States for its aid in the premises; and, finally, the arrival in Caracas of an accredited agent of the company interested in that contract, bearing official despatches from the government of the United States to the undersigned, requesting, in view of the public and even national importance of the matter, the earnest good offices and the personal and official influence of this legation to aid him in protecting and securing the rights of those citizens of the United States whose interests in this respect he represented.

After this preliminary reference, and having previously presented to his excellency the agent of the company, the undersigned proceeded officially to make known to his excellency what he had previously declared to the ministers of his excellency's government, that in rendering his good offices in aid of the purposes of the agent of the company, to secure their rights as the assignees of the Wallace contract, the undersigned was emphatically instructed to forbear from saying or doing anything which could in the slightest degree affect or impair the claim against the Venezuelan government for full reparation on the part of those American citizens whom Venezuela had found in the possession of the Aves island in December last. The undersigned explained, therefore, fully and clearly to his excellency, that all which he might say or do in aid of the agent of the company must be understood with this express reservation: That the Aves claim was a wholly separate matter, in no way to be compromised or affected by any arrangement which might be made in respect to the rights under the Wallace contract, or by any aid which the undersigned might render in bringing about such an arrangement. In reply to a remark from his excellency, expressing his preference that the claim in regard to the previous occupation of the Aves island should, if possible, be disposed of in any arrangement which might be made with the agent of the company, the undersigned answered, as he had before answered

to his excellency's ministers upon the same point, that any such disposition of the Aves claim was wholly impossible, not only by reason of the entirely distinct character of the two subjects and of the duty of the undersigned to treat them separately, but also by reason of the fact that the undersigned was not yet fully in possession of all the information requisite for the due adjustment of the Aves claim. He felt himself authorized, however, in view of recent instructions, to repeat the expression of his confident conviction, that the government of the United States would deem it its duty to maintain the rights of those claimants to full indemnification.

The undersigned, then proceeding more immediately to the objects and purposes of Mr. Pickrell, the agent of the company interested in the Wallace contract, desired his excellency to consider the extremely unfortunate aspect in which this whole guano question, between Venezuela and the citizens of the United States interested in it, now presented itself to the government of the United States. A whole series of events of a grave and highly unsatisfactory character, each of them a separate occurrence, but all having a common reference to the rights of American citizens in the guano islands, had followed each other in rapid succession. The forcible dispossession of the American citizens on the Aves, the contemporaneous conclusion of the Wallace contract, its annulment by Venezuela, in defeat of the rightful expectations and to the great damage of those interested in it, were facts each of which tended to aggravate the other and to complicate the negotiation looking to a satisfactory adjustment of any or all of them. The undersigned earnestly desired his excellency to consider the grave additional complication and difficulty which must ensue, if the agent of the company now present, through the refusal of Venezuela, should find himself unable, after all his efforts, even when aided by the good offices of the legation of the United States, to make any satisfactory arrangement to protect the rights and interests which he represented. It was the duty of the undersigned most respectfully to urge upon his excellency's consideration, that in the judgment of the government of the United States this guano question was a matter of great and public concernment, that it involved not only important rights and large interests, but also a grave question of good faith, the determination of which, under the circumstances in which it had arisen, could not but have its effect upon the relations of the two countries, and that the undersigned, while carefully avoiding any expression which could be possibly construed in an unfriendly or minatory sense, or in any sense not perfectly compatible with the most perfect consideration for the dignity of the Venezuelan government, yet felt bound in frankness to make known to his excellency that both the people and the government of the United States felt a deep interest in this subject, and would see with extreme regret and sensibility any course now taken by Venezuela which should result in a loss and injury to those of our citizens interested in the contract referred to.

On the other hand, the undersigned did not hesitate to say that in his judgment an opposite policy on the part of Venezuela, recognizing and restoring in a satisfactory manner the rights of those citizens, would produce an excellent effect upon the relations of the two governments,

not only as in itself an act of good faith, but also as leaving the very serious question which had previously arisen between the two governments, in regard to the forcible occupation of the Aves island by Venezuela, to be considered and adjusted upon its own character and circumstances, without the *additional* aggravation and complication which must be brought upon it by the persistence of Venezuela in a course of policy productive of great loss and injury *to other citizens* of the United States interested in the Wallace contract.

The undersigned then submitted to his excellency some observations designed to show what appeared to the undersigned the just and reasonable terms upon which the agent of the company was willing to conclude a new contract in place of that entered into with Wallace, and with these the statement of the undersigned was closed.

The undersigned had great satisfaction in hearing from his excellency the President, in reply, that his excellency, from a desire to manifest his profound interest in the full maintenance of the good faith of the Venezuelan government, and especially from his earnest wish to cultivate the most friendly relations with the government and people of the United States, had come to the conclusion that a satisfactory arrangement should be entered into, and that the government, through its ministers, would give the subject its immediate attention.

The undersigned avails himself of this opportunity to renew to Hon. Mr. Aranda the assurance of his very distinguished consideration.

CHARLES EAMES.

Hon. FRANCISCO ARANDA,
Minister of Foreign Relations.

Mr. Eames to Mr. Marcy.

[Extract.]

[No. 16.] LEGATION OF THE UNITED STATES,
Caracas, November 27, 1855.

SIR: I have the honor to acknowledge despatches from the department to No. 19, inclusive.

After examining Mr. Shelton's printed memorandum, enclosed in No. 18, I have much satisfaction in perceiving that he will doubtless be able to clear his case from the unfortunate embarrassment occasioned by the agreement signed at the Aves on the 13th of December last by the Venezuelan naval officers and the American agents there. When the case shall be fully prepared before the department, I may, I presume, expect further instructions upon the subject. At present I have not the proper data as to the amount proper to be claimed as indemnity. * * * * * * *

Hon. WILLIAM L. MARCY,
Secretary of State.

Mr. Marcy to Mr. Eames.

[No. 22.] DEPARTMENT OF STATE,
Washington, December 20, 1855.

SIR: Your despatches to No. 15, inclusive, have been received. The success which appears to have resulted from your negotiation with the Venezuelan government in regard to the Wallace contract deserves commendation. A copy of the contract itself, however, would have been acceptable to the department, especially as we are orally informed that despite the reservation of the rights and claims of those citizens of the United States who were ousted from the Aves islands by a Venezuelan vessel of war, guano from those islands has recently been brought to this country by vessels in the service of the company who are a party to the contract. The accompanying papers, in connexion with those previously transmitted, will afford you materials to show the Venezuelan government that the agreement to abandon the Aves islands, entered into between Captain N. P. Gibbs and Commander Diaz, of the Venezuelan vessel-of-war, was, in point of fact, extorted under duress. This is considered sufficient to invalidate the instrument, and, it is conceived, imparts to the claimants a right to expect from the Venezuelan government an indemnification, which you will urge with energy and prudence.

I am, sir, respectfully, your obedient servant,

W. L. MARCY.

CHARLES EAMES, Esq., *&c., &c., &c.*

Mr. Thomas to Mr. Eames.

[No. 25.] DEPARTMENT OF STATE,
Washington, January 30, 1856.

SIR: I transmit herewith copies of certain papers, a list of which is annexed, which will be found useful to you in your future proceedings in reference to the claims against the government of Venezuela, for losses and damages sustained by the claimants in consequence of their expulsion from the Aves islands.

I am, sir, your obedient servant,

J. A. THOMAS,
Assistant Secretary.

CHARLES EAMES, Esq., *&c., &c., &c.*

Mr. Eames to Mr. Marcy.

[No. 17.] LEGATION OF THE UNITED STATES,
Caracas, February 12, 1856.

SIR: I have the honor to acknowledge despatches from the department to No. 23, inclusive.

I appreciate highly the terms of commendation in which the department, in its No. 22, has alluded to the result of my endeavors in pursuance of your instructions to sustain and protect the rights of our citizens under the Wallace contract in the guano deposits of this republic, and thus to facilitate to the agricultural interests of the United States a supply of that useful article. I now transmit, in conformity with your suggestion, a copy in the original Spanish of the contract concluded by this government with Mr. Pickrell, together with a translation thereof.

Although I could, of course, claim no authority to prescribe the form of the contract, yet I do not doubt that the avoidance by this government of any reference to the Aves island in the article granting the privilege, and the subsequent exception and limitation introduced with reference to that island, were in part, if not mainly, caused by my explicit and emphatic reservation of all the rights and claims of its prior American occupants, and by my declaration that those claims would, without doubt, in my judgment, be energetically sustained by the government of the United States.

To the subject of those claims, especially since the receipt of your No. 22, with its enclosures, I have given my best attention. It is to be regretted, I think, that in a case of such magnitude the claimants have not furnished more ample materials upon which to estimate the *amount* of the indemnification to which they are entitled. Should such further materials, however, not reach me by the next arrival from the United States, now daily expected, I shall deem it my duty, under your instruction, to urge strongly the claim, as it now stands, upon the attention of this government, without further delay.

With high respect, I have the honor to be your obedient servant,

CHARLES EAMES.

Hon. WM. L. MARCY,
Secretary of State.

[Translation.]

Jacinto Gutierrez, secretary of state in the department of the treasury, and Francisco Aranda, secretary of state in the departments of the interior and justice and foreign relations, both in behalf of the government of the republic of Venezuela, and John F. Pickrell, representing the Philadelphia Guano Company, according to the original full power annexed, have concluded the following agreement:

ARTICLE I.

John F. Pickrell, in the name of the Philadelphia Guano Company, which he represents, declares that he formally accepts the resolution dictated by the government of Venezuela on the 28th of May last, of the nullity (in existencia) of the contract respecting the taking of guano, dated the 21st of December, one thousand eight hundred and fifty-four, between Señor Simon Planas, secretary of state in the de-

partments of the interior and justice and foreign relations, and John D. F. Wallace, to whose rights the aforesaid company, incorporated by act of the legislature, approved by the government of the State of Pennsylvania of the United States of America, on the 30th of April of the present year, has succeeded.

ARTICLE II.

The foregoing declaration having been made, the government of Venezuela and John F. Pickrell, with the purpose of avoiding all manner of reclamation and the consequent damages to the republic and to the company, proceed to conclude another separate agreement respecting the taking away of guano, for the reciprocal security of the rights and interests of the parties.

Done in duplicate, in Caracas, on the twenty-ninth of September, one thousand eight hundred and fifty-five.

JACINTO GUTIERREZ,
FRANCISCO ARANDA,
JOHN F. PICKRELL.

A true copy.

[Translation.]

Jacinto Gutierrez, secretary of state in the department of finance, and Francisco Aranda, secretary of state in the departments of the interior, justice, and foreign relations, both in behalf of the government of Venezuela, and John F. Pickrell, of the city of Baltimore, in the State of Maryland, of the United States of America, have concluded the following agreement:

ARTICLE I.

The government grants to John F. Pickrell, his associates and successors, universal and particular, the exclusive right to dig and gather, (esplotar,) sell and export guano from all the islands of the republic upon which said substance may exist, for the period of fifteen years. No other substance existing on the said islands is the object or subject-matter of this agreement.

ARTICLE II.

John F. Pickrell, his associates and successors, shall pay to the government of Venezuela five dollars, Venezuelan currency, (pesos sencillos) for each ton of guano carried away during the fifteen years thus agreed upon; all expenses of digging and gathering, exportation, cartage, freight, and of whatsoever description, being for the account of the contractor. In account for the price of the guano, Pickrell, in the act of signing this agreement, shall deliver four bills of exchange in triplicate, and each for the amount of fifty thousand dollars, Venezuelan currency, payable, respectively, at six, eight, ten,

and twelve months, which bills he shall draw against the Philadelphia Guano Company in favor of the republic, and to the order of the secretary of finance; and when the amount of these bills shall have been reimbursed, then Pickrell, his associates and successors, shall be bound to deliver, monthly, into the treasury of Venezuela, in cash, the price of the guano exported.

Article III.

The contractor, his asssociates and successors, obligate themselves to sell the guano on the islands at the same and equal price to every individual or nation, without exception; since the equal rights of all flags are expressly recognized in this commerce.

Article IV.

The contractor, his associates and successors, shall hand to the department of finance of Venezuela, at the expiration of each month, an exact account of all the guano exported, vouched by the bills of lading; and for the utmost possible avoidance and prevention of all fraud, the government shall place upon the islands all such officials (empleados) as it may judge proper, and shall guard them both by land and naval forces, as it shall deem fit; and in case of any participation, authorization, or tolerance, on the part of the contractor, his associates or successors, in the fraudulent exportation of guano, he and they shall be bound to pay to the government ten dollars, Venezuelan currency, for each ton taken away without the observance of the due forms of proceeding.

Article V.

If the bills of exchange shall not be accepted, or if, being accepted, they shall not be paid at maturity; or if the digging and gathering (esplotacion) of the guano shall not commence within four months from this date; or if the contractor, his associates or successors, shall fail in or infringe any one of their duties or obligations as stipulated, then, and without other requisite or declaration, this contract shall be held to be rescinded and null; and if, through any contingency or motive, Venezuela shall lose, resign, or part with, her actual jurisdiction (dominio) on the island of Aves, situated in latitude 15° 45′ and longitude 64° 45′, then the period of fifteen years shall be understood to have terminated in respect to the said island, without making the government liable to pay any indemnification for the remaining portion of the period.

Article VI.

The doubts and controversies concerning the understanding of each and all of the stipulations contained in this agreement shall be decided by the supreme court of justice of Venezuela, in the exercise of its lawful powers; the contractor, his associates and successors, re-

nouncing the right of domicil without prejudice to the capacity of the government to exercise its rights without the limits of the republic in the cases in which this may be deemed convenient. The secretaries, undersigned, in the name of the government, and John F. Pickrell, for himself, his associates and successors, obligate themselves to the exact fulfilment of this contract, made in duplicate, at Caracas, on the twenty-ninth of September, one thousand eight hundred and fifty-five.

JACINTO GUTIÉRREZ,
FRANCISCO ARANDA,
JOHN F. PICKRELL.

True copy.

[Translation.]

Jacinto Gutierrez, secretary of state in the department of finance, and Francisco Aranda, secretary of state in the departments of the interior, justice, and foreign relations, both in the name of the government of Venezuela, and John F. Pickrell, a citizen of Baltimore, in the State of Maryland, of the United States of America, have concluded the following agreement, supplementary to that of this same date, respecting the taking away of guano:

ARTICLE I.

Notwithstanding the exclusive right granted by agreement of this date to John F. Pickrell, his associates and successors, universal or particular, to dig and gather, sell and export guano from all the islands of the republic in which that substance is found, for the term of fifteen years, the government shall have the right to gather and dig, sell and export for its account, guano enough to load four or more ships, the number of which it shall fix in all the month of October next.

ARTICLE II.

The officials (empleados) and naval or land force which the government may place upon the islands to avoid frauds and to guard the same, shall intervene in the digging, gathering, and exporting of the guano, and shall take care that the civil and political laws of the republic be duly observed, the necessary order being maintained under the authority of the government, in full conformity with the instructions which the government shall issue, and which must be faithfully observed.

ARTICLE III.

The penalty of ten dollars per ton, which the contractor, his associates and successors, must pay in the cases specified in article

fourth of the contract of this date, shall be without prejudice to the fulfilment of the laws and regulations respecting abuses to the injury of the property and revenue of the nation. The secretaries who subscribe hereto in the name of the government, and John F. Pickrell for himself, his associates and successors, bind themselves to the exact fulfilment of this agreement, supplementary to that of this same date. Done in duplicate at Caracas on the twenty-ninth of September, one thousand eight hundred and fifty-five.

JACINTO GUTIERREZ,
FRANCISCO ARANDA,
JOHN F. PICKRELL.

Mr. Marcy to Mr. Eames.

[No. 27.]

DEPARTMENT OF STATE,
Washington, February 20, 1856.

SIR: I transmit herewith a letter addressed to you, with certain accompaniments, by Mr. Henry S. Sanford, in relation to the claim of Sampson and Tappan and Philo S. Shelton against the government of Venezeula.

You need not be assured that in forwarding these papers the department does not intend to be regarded as countenancing in the slightest degree the imputations upon your conduct contained in Mr. Sanford's letter to the President of the 24th December, a copy of which he has enclosed with his other papers. On the contrary, those reflections are believed to be alike groundless and unjust.

In looking over the previous instructions to you upon Mr. Shelton's claim, no mention appears to be made of the statement of the items composing it. Accordingly, I transmit a copy of the letter of Sampson and Tappan and Philo S. Shelton of the 29th January, 1855, setting forth the nature of their claim in detail.

I subjoin, also, a list of the papers, enclosed for your information by Mr. Sanford.

No. 16 is the last despatch received from you.

I am, &c.,

W. L. MARCY.

CHARLES EAMES, Esq., *&c.*, *&c.*, *&c.*

Mr. Eames to Mr. Marcy.

[No. 20.]

LEGATION OF THE UNITED STATES,
Caracas, March 15, 1856.

SIR: I have the honor to transmit herewith to the department copy of a note addressed by me under date of 8th instant, to the minister of foreign relations of this government, in relation to a peremp-

tory demand made upon Venezuela by the government of Holland, for the cession and surrender to Holland, within three days, of the guano island of Aves. I transmit also copy of my note of inquiry on the subject, addressed to the minister under date of 6th instant, with his reply thereto under date of the following day.

The department will perceive that I have emphatically objected to the proposed cession of the island to Holland, on the ground of the pending international reclamation presented by me to this government on the part of the government of the United States, about a year ago, in behalf of those citizens of the United States who were in actual occupancy of the island when it was taken possession of by the Venezuelan forces. It has been my purpose so to present my objection as to bar this government from setting up hereafter any such act of cession as a pretext upon which to avoid the force and urgency of that reclamation. I may add, in this connexion, that since the receipt of your No. 22, which afforded me the means of freeing the case of the claimants from the embarrassment occasioned by the alleged "agreement" of their agents with Dias, I have in several interviews with the minister urged the claim on his prompt attention, and I am not without hope of being able soon to submit to your consideration a proposition for its adjustment.

The department will perceive by the latter portion of my note of the 8th instant to Mr. Gutierrez, that in alluding to the contract with Mr. Pickrell, as an additional reason which would appear to render the cession of the Aves by Venezuela to Holland at this time improper, I have yet fully recognized and admitted the fact that any inclusion whatsoever of the Aves in that contract, however limited or conditional, had no manner of countenance or sanction by me or by the government of the United States. This fact left me no alternative but to restrict my opposition to the proposed cession on this ground to the limited and guarded terms of appeal to the good faith of Venezuela which I have employed.

I have the honor to be, with the highest respect, your obedient servant,

CHARLES EAMES.

Hon. WILLIAM L. MARCY,
Secretary of State.

LEGATION OF THE UNITED STATES,
Caracas, March 6, 1856.

SIR: The undersigned, minister resident of the United States, presents his respects to the honorable minister of foreign relations of Venezuela, and has the honor to make known to him that information has just been received by the undersigned that the government of Venezuela has now under consideration an official communication, made in behalf the government of Holland, demanding the unconditional cession and surrender, within the period of three days, by Venezuela to that government of the guano island, known as the

Aves island, and in relation to which an international reclamation by the government of the United States, in behalf of its citizens, is now pending before the government of Venezuela.

The undersigned desires to be informed by the honorable minister of foreign relations whether this information be exact, as in that case he will deem it his duty to address a communication to the Venezuelan government on the subject in its relations to the rights and interests of the United States and of their citizens.

Awaiting the favor of as early a reply as may be convenient, the undersigned avails himself of this opportunity to renew to the honorable minister of foreign relations the assurance of his distinguished consideration.

CHARLES EAMES.

Hon. JACINTO GUTIERREZ,
Minister of Foreign Relations.

[Translation of copy, with No. 20 of Mr. Eames.]

In the year of the law the 27th, and of the independence the 46th.

CARACAS, *March* 7, 1856.

The secretary of foreign relations of Venezuela, in deference to the wishes expressed by the minister resident of the United States in his note of yesterday transmitted to this department, has the honor of informing him that, on the 5th instant, Mr. Declisur, the consul of the Netherlands, and temporarily in charge of the general consulate at Laguaira, addressed him an official note requiring, among other acts, and within a period of three days, an acknowledgment of the right which the government of the Netherlands holds over the Aves [Bird] island, and a withdrawal of the Venezuelan troops that may be stationed there. This request is now up for consideration by this government.

The undersigned renews the tender to the Hon. Mr. Eames of the assurances of his distinguished consideration.

JACINTO GUTIERREZ.

Hon. Mr. CHARLES EAMES, *&c.*, *&c.*

LEGATION OF THE UNITED STATES,
Caracas, March 8, 1856.

SIR: With reference to the note addressed by the undersigned, minister resident of the United States, to the honorable minister of foreign relations of Venezuela, under date of 6th instant, in respect to the alleged demand made by the government of Holland for the immediate cession of the guano island of Aves by Venezuela to that government, and in reply to the note addressed to the undersigned under

date of yesterday by the honorable minister of foreign relations of Venezuela, the receipt of which the undersigned has the honor to acknowledge, and by which the undersigned is informed that such demand has been made and is now under consideration by the Venezuelan government, the undersigned, for the purpose of protecting all the rights and interests of the government and the citizens of the United States affected by that demand or by the disposition which may be made of it, has now the honor to state, that soon after the occupation of the Aves island in question by the Venezuelan forces in December, 1854, the undersigned, under instructions from his government, made known to the government of Venezuela that at the time of that forcible occupation by Venezuela, the island was already and actually in the lawful occupancy and possession of certain citizens of the United States, whose right to retain that possession was, in the opinion of the government of the United States, good against the whole world, and who could not rightfully be disturbed by any power; they having been the first discoverers of the guano on the island, and having taken full and formal and permanent possession thereof while it still was, as it always had been, derelict, deemed uninhabitable and valueless, and never reduced to the possession nor embraced within the sovereignty or jurisdiction of any nation.

That upon this view of the case, the government of the United States, in behalf of these its citizens, at once instituted against the government of Venezuela an international reclamation, claiming all their rights in the premises including full reparation for all the losses and injuries sustained by them in consequence of their forcible expulsion from the island by the Venezuelan forces.

That this reclamation by the government of the United States is still pending in its full extent, and that the undersigned has recently received from his government emphatic instructions to continue to urge the same upon the government of Venezuela.

That any act of cession of that island by Venezuela to any government must, therefore, if done, be done in full view of all these facts, and of all the responsibilities attaching to the act and to all the parties thereto, in its bearing upon the rights and interests of the United States, and of their citizens, in the premises.

And that in this view, the undersigned, for the present, and until he can communicate with his government upon the subject, deems it his duty to object, and does hereby object, to any such act of cession or transfer by the government of Venezuela of the island of Aves in question to the government of Holland.

The undersigned, in this connexion, deems it his duty further to state that he has in his possession a copy of a contract entered into on the 29th of September last, between the government of Venezuela and John F. Pickrell, a citizen of the United States, conveying to the said contractor and his associates certain exclusive privileges in the guano islands of Venezuela, in which contract the undersigned perceives that the island of Aves, in question, is specified under certain conditions and stipulations therein set forth. Though it is undoubtedly true that the inclusion of that island in the said contract, in any form and to any extent, took place without any manner of countenance or

sanction on the part of the government of the United States, or of the undersigned, by whom, on the contrary, all the rights and claims of its prior American occupants were fully and expressly reserved and saved from being in any way affected or impaired by that negotiation, and though the undersigned, in view of that reservation, now abstains from giving any manner of sanction to the insertion of the Aves island in that contract, to operate thereby any defeat of those reserved rights and claims in their full extent, yet he deems it his duty to state, in reference to the cession of the island now under consideration, that it appears to him that Venezuela, on her own sole responsibility, did, by that contract, voluntarily transfer, for good consideration, to a citizen of the United States, in their full usufruct, as against any foreign power, whatsoever possessory claims in that island she may have set up, be the same, in her own judgment, greater or less, and that, therefore, upon any view of her case, the proposed cession of the island to Holland is objectionable. And the undersigned again hereby makes known that such cession, if it be made, must take place subject to all and singular the rights and claims in the premises of the government of the United States, and of any and all of its citizens, against whomsoever the same may concern.

The undersigned avails himself of this opportunity to renew to the Hon. Mr. Gutierrez the assurance of his distinguished consideration.

CHARLES EAMES.

Hon. JACINTO GUTIERREZ,
Minister of Foreign Relations.

Mr. Marcy to Mr. Ames.

[No. 30.]

DEPARTMENT OF STATE,
Washington, April 25, 1856.

SIR: I transmit herewith extracts from a letter from Henry S. Sanford, esq., to the department of the 8th ultimo, with copies of the enclosures therein referred to, which may prove useful to you in prosecuting Mr. Shelton's claim.

Mr. Sanford has also communicated to the department printed and attested copies of the testimony of Captain Nathan P. Gibbs, which, as bearing directly upon the *facts* of the case, will be convenient for reference. One of these is enclosed herewith.

With regard to the documents which Mr. Sanford requests, may be obtained through you, he has been informed that they would be procured if you found it expedient to solicit copies from the Venezuelan government. You have already, with your No. 17, transmitted a copy of the Pickrell contract, but it is believed that no copy of the first contract of the Philadelphia company, of Captain Dias' report to his government, in relation to his seizure of his so-called Sbelton Isle, or of the protest of the British representative at Caracas has been forwarded with your despatches. If practicable, you will be pleased to obtain and transmit these documents to the department.

Your despatch No. 20 has just been received; the series to that number being complete. In closing this despatch, I have only tim to say that your course in relation to the pretensions of Holland to the title of the Aves islands, and the proposed cession of them by Venezuela to that government, is entirely approved.

I am, sir, your obedient servant,

W. L. MARCY.

CHARLES EAMES, Esq., *&c., &c., &c.*

Mr. Marcy to Mr. Eames.

[No. 37.]

DEPARTMENT OF STATE,
Washington, August 14, 1856.

SIR: Herewith I enclose to you a series of transcripts of letters addressed to the department, together with their respective accompaniments, in relation to the claim of Messrs. Shelton and others, against Venezuela, for the losses sustained by them in consequence of their expulsion from the Aves islands. A list of the papers is subjoined.

The department has not received any information from you in respect to your progress in the adjustment of this claim since your despatch No. 20, of the 15th March last, in which you acknowledged the receipt of the instruction of the 20th December last, and stated that it had afforded you the means of freeing the case of the claimants from the embarrassment occasioned by the alleged "agreement" of their agents with Captain Dias; and you expressed the hope of soon being able to submit a proposition for the adjustment of the business.

The department has awaited with considerable solicitude the propositions which you hoped to offer from the Venezuelan government. Apart from the consideration that it is desirable, as far as may be practicable, to adjust expeditiously all pending questions with foreign governments, there is an obvious propriety in urging this case to a speedy termination, not only on account of the claimants, who are represented as having been reduced from affluence to a condition of comparative indigence by their *actual* losses, but also because our commercial and agricultural interests are, to a considerable extent, involved in the ultimate issue.

In your No. 10, of 26th April, 1855, you communicated to the department the result of the investigations which you were directed to make by my No. 12, of the 24th January, 1855, as to the title of Venezuela to the islands claimed by Shelton and others as *derelict* when discovered by their agents. Your conclusions were unqualifiedly adverse to the pretensions of Venezuela, although your views appear to have been then undecided as to the validity of the claims made by Holland, and the *quasi* claim of France to the same islands, although you were assured that the latter would not be urged.

Whatever, then, may be the final decision as to the rights or claims of any other power to the Aves islands, it is clear that Venezuela has no title to them, and that her pretended claim was set up only as a

speculation, she hoping to derive a profitable revenue from a sale of the guano, or a disposal of the right to export that article to other parties.

If Venezuela's claims to the title of the islands be exploded, it is manifest that, whether *derelict* or not, so far as other powers are concerned, that government had no right to expel the American discoverers and occupants from the islands, and that in pursuing the tortious and arbitrary measures which were resorted to by her agents in the expulsion of the Americans, she is responsible for the damages and losses which have accrued therefrom.

The "agreement," as it was called, between Captains Gibbs and Diaz, appeared, at first view, to be an obstacle to the prosecution of the claim as urged by the counsel of the claimants. More complete evidence upon this point, however, seemed to establish the fact that the nature of that "agreement," as signed by Captain Gibbs, was wholly misrepresented to, and misunderstood by him, and that, therefore, the document so designated was, in point of fact, illegal and invalid.

This subject was adverted to in my No. 22, of the 20th December last, and in acknowledging the receipt of that despatch you admitted, as I have intimated, that you were enabled by it to clear the case of a material difficulty.

It is to be regretted that the government of Venezuela has not, in the lapse of time which has occurred since this claim was presented through you, formally apprized you of the grounds of objection to it. With the documents heretofore sent to you, together with those herewith transmitted, it is anticipated that you will be fully competent to meet any objection which Venezuela may set up in the premises. Having made an express reservation in favor of the rights of Shelton and others in all your negotiations involving the Aves islands, you will not be embarrassed by any incidental discussions on that point. You have access, doubtless, to sufficient data to support the emphatic views you have expressed to the department in respect to the invalidity of the Venezuelan claims to the island; and from the testimony transmitted from this department you will be able to show conclusively, 1st, the discovery of the guano deposits by the agent of the American claimants; 2d, the expenses actually incurred by them in fitting out expeditions for taking the guano; 3d, their expulsion from the islands by the Venezuelan authorities; and, 4th, the losses sustained by the destruction of property, and the consequential losses directly imputable to the removal of the guano by a company to whom the monopoly was granted by the Venezuelan government after the expulsion of the first party in actual possession.

You will, as soon as may be convenient, present these views to the government of Venezuela, and express the earnest wish of the government of the United States that the claim may be promptly adjusted upon terms of equity and right.

I am, sir, your obedient servant,

W. L. MARCY.

CHARLES EAMES, Esq., *&c.*, *&c.*, *&c.*

Mr. Marcy to Mr. Eames.

[No. 42.] DEPARTMENT OF STATE,
Washington, January 2, 1857.

SIR: Your despatches to No. 24, inclusive, have been received—the last on the 17th ultimo.

Your No. 22 was accompanied by a copy of the "Wallace Contract" with the Venezuelan government, which you were requested to procure in my instruction to you of the 25th April last; but it is to be regretted that the other papers, which were at the same time mentioned as likely to be of service to the Shelton island claimants—namely, the report of Captain Dias, and the protest of the British chargé d'affaires—have not been obtained.

You express the opinion that the former may be difficult to procure, and that the latter, although it may be obtained, would not probably be a document of such a character that the claimants would "derive any help" from it. It is unfortunate, notwithstanding the apprehensions you entertain respecting the feasibility of procuring one of these documents, and the adverse effect upon the interests of the claimants which you ascribe to the other, that you have not obtained copies of those papers, which would doubtless contribute largely to an elucidation of many important points involved in this claim. The only object held in view by the department in requesting you to procure those documents was to facilitate the efforts of the claimants to secure reparation for the large losses sustained by them; and if the documents to which they refer should invalidate rather than strengthen their claim, the department is not responsible for such a result.

It is difficult to perceive why your application for the Dias report should not have proved "successful." The claimants have set up a case having its origin in the alleged conduct of that officer of Venezuela; they have made positive statements of their injuries at his hands; they refer to his words as well as to his acts; and yet, although these charges are pointed and specific, and are sustained by ample testimony, the government of Venezuela has not, so far as this department is informed, afforded the slightest explanation or justification of his conduct; and the claimants are naturally at a loss whether to interpret this reserve as an admission of their allegations, or as a studied assumption of indifference to their grievances.

It is, in fact, a ground of surprise that so long a time has been permitted to elapse without some intimation from the government of Venezuela of its determination in regard to this claim. Nearly two years have passed since the opinion was expressed (in my despatch of January 24, 1855) that the Aves island—claimed by P. S. Shelton and others—was "derelict." That being so, it was discovered, found to be valuable, and taken possession of by American citizens; that their "right to retain it was good against the world;" and that Venezuela had forcibly driven them off, to their "serious injury;" and you were instructed that if, after due investigation, you should be satisfied of the fact first assumed, viz: that Venezuela had no fair title to the sovereignty of the island, then you were to present the case "strongly and clearly" to that government, and give it notice that this government expected "that our citizens will be indemnified for their losses."

The result of your investigation was decidedly adverse to the claim of sovereignty as regards Venezuela. Whatever may have been the claims to the island interposed by other nations, they appear to be entirely abandoned, for Venezuela has, without opposition or obstructions, on the part of those nations, disposed of her pretended rights of occupation to other parties, with whom she has made successive contracts, granting a monopoly of the guano deposited thereon. But, were it otherwise—were the claims of other nations rather than Venezuela to the sovereignty of the island sustained, that condition, if anything, only aggravates the wrong perpetrated by her officers upon citizens of the United States. It is no defence for the spoliation of their property, their forcible expulsion, and their heavy losses, that the island belonged to some other nation than Venezuela.

The absence of a valid title on her part having been satisfactorily demonstrated to the department and to yourself, it was believed that the Gibbs and Dias "agreement" was the only remaining point upon which Venezuela could rest a denial of the just claims of our citizens. But even this difficulty seems to have been removed by the documents furnished by the claimants, as, in your despatch of the 15th March last, you admitted that you were thereby enabled to free the subject from a serious embarrassment.

And yet it does not appear that Venezuela has either made concessions to the just expectations of the claimants, or has formally announced upon what grounds she excuses or defends the outrage committed upon them. It is not known whether she insists upon the expulsion of the Americans by Dias as lawful, or upon what pretext she now claims the island, and barters away the privilege of gathering the guano which was there at the time of discovery. We are not informed what construction is now given to the so-called "capitulation" of Gibbs to Dias; whether she insists upon it as of full force and validity, or, if that be not asserted, whether further proof is required of the fact of fraud and coercion in procuring Gibbs' assent to it.

Your despatch of October 9 complained of the want you felt of more proof of the value of the deposite. That want, it is probable, has been supplied by the accompaniments to my No. 37, of the 14th August last. The claimants have, however, been apprized of your complaint upon this point, and they will, doubtless, supply the deficiency if possible. Still it would seem to be inexpedient to defer or protract discussion in consequence of the absence of full data. There are facts, abundantly sustained by the evidence, of a grave outrage upon the persons and property of our citizens, and of heavy actual losses consequent thereupon. The case appears to the department to be amply fortified as regards the principles involved, and the right of the claimants to look for redress at the hands of Venezuela. The consequential damages, those losses which the original discoverers have sustained by the sale of the guano upon the island to other parties, and which form the element of a legitimate demand for reparation, need not embarrass or retard the settlement of the more important preliminaries which the case presents.

The protracted delay which this claim has encountered, without any apparent reason, has been the cause of great embarrassment to the claimants, and the further procrastination of a settlement cannot be regarded

with indifference by this government. The views expressed to you from the first in reference to it have been of a decided character—the only material doubt having been in reference to the title of Venezuela. With ample opportunities of investigation, you have confirmed the views taken by this department upon that point. There remains no course, then, but to press the demand for redress upon Venezuela in a formal and decisive manner, and request, in behalf of your government, her determination in reference to this case. If she admits her liability for the spoliations committed, the basis of adjustment may be fixed without difficulty or delay. If she refuse redress, she will be expected to offer such reasons for that course as will be satisfactory to this government, especially in view of the stipulations contained in the 3d section of the 34th article of the treaty of 1836, which contemplates certain modes of redress in a case where either "party, considering itself offended, shall first have presented to the other a statement of such injuries or damages, verified by competent proofs, and demanded justice, and the same shall have been either refused or unreasonably delayed." I am, sir, &c.,

W. L. MARCY.

CHARLES EAMES, Esq., *&c., &c., &c.*

8. Deposition of Richard Thornhill.
9. Deposition of John McCabe.
10. Letter of H. S. Sanford to Hon. J. M. Mason, accompanying.
11. Deposition of Captain James Wheeler.
12. Copy of a letter to his excellency Mr. Dallas from E. Hammond, of the Foreign Office, London.
13. Bill proposed declaratory of the rights of American citizens who may discover and occupy derelict guano islands, &c.

No. 1.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled, the memorial of Philo S. Shelton, a citizen of the United States, resident in Boston, in the State of Massachusetts, merchant, in behalf of himself and of other citizens of the United States, his associates, interested with him by transfer from him, respectfully showeth:

1. That in the month of March, 1854, your memorialist fitted out the brig "John R. Dow," of Boston, owned by himself, and under the command of Captain Nathan P. Gibbs, also a citizen of the United States, and she sailed from Baltimore on a cruise of discovery in the Caribbean sea for derelict and desert guano keys or isles.

2. That in the month of April, 1854, said Captain Gibbs, in said brig, acting as the agent of your memorialist, discovered and took possession of a desert and derelict rock or isle in said sea, situate in north latitude 15° 40′, and west longitude from Greenwich 63° 38′, then known as "Aves," or "Bird Island," now called "Shelton's Isle."

3. That your memorialist was then engaged in the guano trade from the Gulf of Mexico, but relinquished the same at a great sacrifice for the said isle, which he named "Shelton's Isle," and forthwith, on the return of said Captain Gibbs to Boston, despatched said brig, under his command, to said isle, provided with extra launches, and laden with materials for a wharf and houses to be erected thereat, and with implements, and provisions, and water for laborers, and with many workmen by said vessel, to gather guano at said isle; and that in June, 1854, said brig arrived thereat, and said Captain Gibbs, your memorialist's agent, and the workmen accompanying him, forthwith landed, erected houses and a wharf thereon, and continued in peaceable and undisturbed possession; and that your memorialist continued to despatch other vessels and workmen, and provisions, &c., until December, 1854, when they were violently dispossessed of and expelled therefrom by an armed military force of the government of the republic of Venezuela, under circumstances of an aggravating character, and combining gross fraud with violence, and being alike an outrage upon your memorialist and the citizens of the United States, whose flag, raised by its citizens there, was struck by the said military force.

4. That your memorialist presented early in January, 1855, to the proper executive department of the United States his claim for redress against the government of Venezuela, but as yet no satisfaction has been accorded him, and said claim is still pending; that the amount of said claim is $341,000, of which $28,500 is for actual losses sustained in damages occasioned by demurrage, false freights, and forfeited charter, parties of his vessels employed in said business, and for the value of the wharves, houses, boats, implements, provisions, and other property of which he was despoiled by said military force at said isle; and that the residue of said claim is a charge of $312,500 for 25,000 tons of guano, at $12 50 per ton, being, as your memorialist believes, less than one-fifth of the quantity and value of the guano on the said isle at the time of his eviction; and he also asked for restoration of said isles.

5. That annexed hereto is a deposition of said Captain Nathan P. Gibbs (a duplicate of which has been filed in the State Department of the United States) in said claim, and which sets forth the facts of said case truly and at large. And that there are on the files of the State Department sundry depositions, documents, and papers, exhibiting the justice of your memorialist's claim to said isle and guano, and showing also that his right is incontestable under the laws of nations, and exhibiting also the wrongs and outrages committed upon him, and the damages he has sustained; as to all which as yet no atonement hath been made.

6. That, if not allowed the item for the guano on the said isle as his property, the direct and consequential damages sustained by your memorialist in the premises, in addition to those specified in said two other items of the claim, would, with said items, amount to upwards

of $40,000, (those augmenting the aggregate to such amount having been in the stating the claim to the State Department estimated as covered by the item charged for the said guano therein, and therefore omitted to be specifically stated, and also the property of which he is despoiled, being estimated at the cost in the United States merely, as is shown by the deposition of Captain Gibbs,) and your memorialist also shows that since December, 1854, a large amount in quantity and value of the guano on said isle has been abstracted under the authority of the government of Venezuela, for which, your memorialist respectfully submits, said republic of Venezuela should be compelled to pay to him upon the restoration of said isle.

7. That the republic of Venezuela has not and never had a shadow of right or title to the said isle or the guano thereon; and her only pretences in justification for the forcible expulsion of your memorialist's workmen and agent therefrom, and for despoiling him of his property, are, that your memorialist's agent was not a commissioned officer of the United States, authorized to hoist the flag of the United States thereon and occupy the same; and a fraudulent paper in Spanish, alleged by it to admit the title of Venezuela, procured by misrepresentation, crime, and violence, by the officers of Venezuela from the agent of your memorialist, though said agent was without authority to sign the same. And your memorialist annexes hereto a sketch showing the location of said Shelton's Isle with reference to several of the West India islands and to the coast of Venezuela, by which it will be seen that said isle is more than three hundred and fifty miles from the latter, whilst it is less than half the distance from several of the former; and, being separated from it by the open sea, Venezuela has no claim upon the ground of contiguity or being appurtenant.

8. That your memorialist claims that, until otherwise declared by a law of the United States, he was and is entitled, as the discoverer of said desert and desolate guano rock called Shelton's Isle, to the exclusive use of the guano thereon and of said isle, in virtue of said discovery and his possession aforesaid, the sovereignty and jurisdiction thereof being vested thereby in the United States; but that your memorialist is informed that his claim to said exclusive ownership of said guano and said isle is contested, and alleged to be invalid, unless the federal government of the United States do recognize the same, and vest said ownership in him by joint resolution or act of Congress to that effect.

Therefore, your memorialist, humbly but confidently relying upon the just and liberal protection and aid of Congress, prays that such resolution or act may be passed for the benefit of himself and associates, specially referring to said isle, and confirming the right of your memorialist and his associates thereto, provided your honorable bodies may deem such action requisite to confirm said right; or that such other action may be had in the premises to obtain and secure your memorialist justice, as to the wisdom of your honorable bodies may seem meet.

And your memorialist, as in duty bound, will ever pray.

PHILO S. SHELTON, for self and others,
By H. S. SANFORD, *Attorney in fact.*

DERBY, CONNECTICUT, *April* 19, 1856.

No. 2.

Memoranda of Philo S. Shelton, in his case for State Department, June 20, 1855.

[For particulars, see in New York "Herald" and "Times," of May 23, a letter to Mr. MARCY from P. S. SHELTON, dated 14th May, 1855.]

I. FACT OF DISCOVERY.—Captain N. P. GIBBS, in command of the brig "JOHN R. DOW," in our employ, whilst on a cruise, expressly for *discovery of guano*, on desert islands in the Caribbean sea, about last of March, 1854, or first of April, discovered "AVES ISLANDS" in latitude 15° 40′ north, longitude west 63° 38′. The principal one is named "SHELTON'S ISLE." He personally landed on it and assumed possession, having found guano, of which he was in search, upon it, [vide extracts from his letter or report to us, dated April 6, 1854, marked I, enclosed.] He returned to the United States to get vessels to go back and take possession of the guano and isle, with a competent force, as soon as possible. His formal affidavit will be procured of these facts as early as practicable. We did not think it essential to procure and send it to you, inasmuch as the consummation (of the *inchoate* right thereby acquired) by occupation, in a few weeks subsequently, is the most material. But Captain JAMES WHEELER's deposition (now filed, B) proves conclusively the *discovery* of the guano, &c., as stated. WHEELER was at that time in our employ, and then engaged in shipping guano for us from the Gulf of Mexico; and whilst in the Gulf, Captain GIBBS told him of the discovery he had recently made, and on his (WHEELER) visiting Boston, in May, he (W.) communicated the facts to LANG & DELANO.

II. DESCRIPTION OF SHELTON'S ISLE.—See map heretofore submitted, and that now sent, (marked I.) The isle is about 4,000 feet long, and about 350 feet wide. *It is a desert unhabited rock.* It has, however, become *inhabited.* When he discovered it, it was not susceptible of being inhabited, unless great artificial improvements were made by sending tenements and soil thither; and also by conveying provisions and water there, till the latter could be procured by deep boring in the rock. The pretence that before we took possession it was inhabited or occupied by any human being for any considerable length of time is utterly false. Its appearance then showed this conclusively.

We have learned that it was visited in March, 1835, by H. B. M. ship "RACE HORSE," and that then, and formerly, some stragglers from ST. THOMAS occasionally visited it and gathered eggs there; and in a publication in a pamphlet called the "Nautical Magazine," stated to be an account of the isle, it is said there was an "egg collector's" hut there *then*, "and a tomb in the centre of the island," being that of "the governor of the egg collectors," but the description of the form of the isle and its length, width, &c., do not correspond with the fact. No appearance of any tomb or of any hut ever having been there existed in 1854, when GIBBS first landed. The Magazine account is, therefore, more or less *fancy*. The latitude stated nearly agrees with ours, but no longitude is given.

The Danes, (if the occasional visits of the St. Thomas egg collectors

can be regarded as actual permanent use and occupation,) may have had some right in 1835. But this was abandoned; and in 1851 and in 1854 it was *uninhabited* and "DERELICT." *

"Johnston's Gazetteer" published in London in 1851, says "Aves or Bird Islands is a small group of islands in the Dutch West Indies, southeast of the island of Buen Ayre—so called from the vast number of birds which frequent there—the only inhabitants are a few Dutch fishers;" [these are latitude 12° north, longitude 67° 40′ west, more than 180 miles further south, and 240 miles further west than SHELTON'S ISLE.] "II. An uninhabited island, 147 miles west of Dominica, latitude 16° 40′ north, longitude 63° 38′ west." The islands of Guadaloupe and St. Thomas are nearest SHELTON'S ISLE.—(See Wyld's and Johnson's atlasses. See *Bouillet's Dict. Hist. et de Geog.* as to Aves Islands being in longitude 65° 38′ west, latitude 15° 30′ north, and inhabited by some Dutch fishermen. These are not SHELTON'S ISLE. The Dutch government have sent a squadron to Venezuela and forced her to make indemnity for taking these last isles.)

III. FACTS OF OUR OCCUPATION.—In June, 1854, we despatched several vessels to SHELTON'S ISLE, to occupy it and procure the guano. We did not *delay* after Captain GIBBS' return and the report of his discovery. We despatched them forthwith, and continued to do so, up to the 15th January, 1855, when we *first heard of* the isle being invaded by DIAS, and of GIBBS being ordered off, &c. *Our occupation of it was notorious during all that time.* LANG & DELANO, upon WHEELER'S disclosure to *them*, sent vessels also, in June. *Our* vessels were the brig "J. R. Dow," N. P. GIBBS, master, (brought home by the mate SMITH;) brig "CRONSTADT," HOWLAND, master, (who died at the isle, and also some of his crew;) ship "JUNIUS," ERSKINE, master; ship "JAMES N. COOPER," NICKELS, master; barque "CARLO MAURIN," SAFFORD, master, (despatched from Liverpool;) barque "AMAZON," ——— master; brig "VIATOR," ——— master; brig "MARY PEARCE," ——— master; and others, whose names we cannot here remember, not having papers to refer to. They were all vessels of the *United States*, and manned "as required by law" by American citizens.

As stated in Captain Wheeler's first affidavit, (marked B,) our first vessel arrived nearly about the same time (early in July) as he did, in one of Lang & Delano's; and all commenced taking guano. Our taking possession of it was undisputed, and of course peaceful. We continued this occupation, with many employés, *uninterruptedly and without molestation*, until the month of December, (13th, 1854,) though several vessels of other flags and *some public vessels of war* visited the isle during that time. The proofs of discovery and of assuming the occupation peacefully, and peaceful use and possession for several months, if deemed imperfect, will be rendered complete. The fact that several foreign vessels, and amongst them ships-of-war, as above stated, visited the isle, is partly proved by Wheeler's second affidavit, (marked C.) But other proof will be furnished.

As to our intention of permanent possession of "Shelton's Isle,"

* See De Horsey report, transmitted by Mr. Dallas.

we will show that we sent out and placed on the isle several *houses*, wharves, &c., &c., and carried out at different times water, provisions, &c.; even "*American soil*" went out as ballast to be left there, and also American females, (wives of some of our employés,) went out in some of our vessels.

We feel assured that if our company had staid there some time longer, and the question of citizenship had been raised as to persons *born* there, our government would not have deemed them *native citizens of Venezuela*.* We purposed to make the isle *a place of rendezvous* for our guano vessels, and for supplies of coal, water, wood, &c.—(See Captain Gibbs' printed affidavit, Captain Wheeler's third affidavit, and R. Thornhill's affidavit, and Commander de Horsey's letter, &c.)

IV. DISCOVERY OF ITSELF GIVES NO TITLE.—As is shown in our letter of the 14th May, by the *jus gentium*, the mere discovery of vacant isles in the high seas does not vest in the individual discoverer, or in the State to which he belongs, any right except that of taking within a reasonable time the actual occupation and possession of the isle; and that if such right is neglected to be exercised, any subsequent discoverer acquires such right equally as the first. We refer you to the authorities cited in that letter.—(Vattel, *Droit des Gens*, Am. ed. 1854. p. 98, &c., §§ 207–8–9; 1 Phill. *Int. Law*, p. 242, §224; 1 Kent, p. 177, *jus in re, jus in rem*, as to cessions; Wheaton's *Int. Law*, ed. of 1855, pp. 217, 218; Puffendorf, L. 4, c. 6, § 3; Ibid. L. 4, c. 6, § 1, p. 1. Ibid. 4, 12, 6, 8; Grotius, 2, 3, 4; Ib. L. 2, c. 2, § 2, 5; 3 Kent, p. 462; Bynkershoek, D. M. 1; See also Barbeyrac, Barlamqui and Grotius; Barbeyrac, notes; 1 p. 385 Puff.: Bynkershoek said "that, by the law of nations, property which begins with a corporal possession ends with it also;" Ib. 386, p. 169.)

V. ASSERTED CLAIM TO DISCOVERY BY SPAIN AND OF VENEZUELA AS HER SUCCESSOR.—It is not pretended by Venezuela that she is the first discoverer; but it is said *Spain* was, and that Spain is her antecessor. Whether either of these assertions are fact or not is wholly immaterial; for neither *Spain* nor *Venezuela* ever took possession, or if they did, they abandoned it long since. *Venezuela* has not produced any proof as to the first discovery, which she should be required to do.—(See 1 Phill., § 267, p. 288, § 274, p. 298; Grotius L. 2, c. 9, § 8, &c., 260, p. 280; 1 Kent's Com. VI. p. 25; Wheat. *Elm. Int. Law*, 40–41–42; Puff., lib. 4, c. 9, l. 8, c. 12, §§ 1, 2, 3; Vatt. § 98, p. 170; 5 Rob. Ad. Rep., p. 114, the "*Fama.*")

Spain is no more *her* antecessor, and she is no more the inheritor, than Mexico and the other States, formerly provinces of Spain; and Shelton's Isle no more "pertains" to Venezuela than it does to Cuba or Puerto Rico.

VI. TITLE CLAIMED BY VENEZUELA FROM CONTIGUITY, &c.—Shelton's Isle is separated by several hundred miles of open sea from her shores. She has no possessions near it. As before stated, it is nearer those of at least three other nations, and in fact the Dutch have possessions

*See U. S. *vs.* Davis, 2 Sumner, 482.

between it and the Venezuelan coasts.—(See maps and charts generally.)

The locality of this isle, we conceive, destroys the probability that as to it Spain was her antecessor as to "*discovery*" and as to occupation, or that either Spain or she ever exercised any jurisdiction over it.

The claim on the ground of contiguity is clearly preposterous, as on the score of natural "*increments*" no right "*pertains*" to her on either score.—(See 1 Phill. §§234–235, p. 248, § 289, p. 255; Vat., p. 128, &c., §§ 289, 290; 5 Rob. Rep., 573, the *Anna;* Grotius *de Jure Bel. ac Pac* Lib. 2, c. 3, § 10; Vattel, lib. 1, c. 23, §§ 288, 296, p. 127, &c. See Bynk. *Quaest. Jur. Pub.* lib. 1, cap. 8; *De dom. mar.* cap. 2.)

VII. POSSESSION AND OCCUPATION MUST BE ACTUAL USE AND SETTLEMENT.—It must be *pedis possessio*, and coupled with positive exercise of actual jurisdiction; merely hoisting national flag, planting crosses, and such like ceremonies or surveys are of little moment.

And the *possession* and *occupation* must be *notorious;* other nations must have knowledge of the claim.—(See 1 Phill., § 241, p. 259; Ib., § 247, p. 263; §§ 248, 249, p. 263; § 230, p. 246–7; Klüber, § 126; Vattell, §§ 141 to 146, pp. 187 to 190; Ib., § 208–9, p. 100; Wallace's Pamp. on the Oregon Question; Bynk. *de dom. mar.*, vol. 4, c. 1, p. 360; Eug. Ortolan, *dom. Int.*, p. 37; 8 Wheat., p. 573; 1 E. Ort. § 184, p. 152; *1 Phill., § 222; Ib., §§ 225, 226, 231.

1 Phil., 231. Writers on international law agree that use and settlement, or in other words *continuous* use, are indispensable elements of occupation properly so called. The mere erection of crosses and inscriptions is ineffectual for acquiring or maintaining an exclusive title to a country of which no release is made.—(Klüber, § 126.)

1 Phil., § 225. "With respect to original acquisition, we have first to consider under this head the title which a nation acquires by occupation. *Discovery*, *use*, and *settlement* are all ingredients of that *occupation* which constitutes a valid title to national acquisitions."

§ 226. "Discovery, according to the acknowledged practice of nations, whether originally founded upon *comity* or *strict right*, furnishes an *inchoate* title to *possession* in the discoverer. But the discoverer must either, in the first instance, be fortified by the public authority and by a commission from the State of which he is a member, or his discovery must be subsequently adopted by that State, (Dig. 3, 5, 6, 9, 11, 75, 124, 98, 43, 16, 14,) otherwise it does not fall, with respect to the protection of the individual, under the cognizance of international law, except in a limited degree; that is to say the *individual* has a *natural* title to be undisturbed in the possession of the territory which he occupies as against all *third* powers. It will be a question belonging to the municipal law of his own country, whether such possessions do not belong to her, and whether he must hold them under her authority and by her permission. Such would be the case with the possessions of an English subject."—(pp. 242–3.)

---

* That person is *properly* said to *possess* a thing who both actually and corporally retains it, and who desires and intends at the same time to make it his own. That person who, having no such desire or intention, by mere corporal act retains a thing, is only in a *gross and inacurate sense* said to possess it.—(§ 85, Traite du droit de Propriete, by Pothier.)

"As dominion is acquired by the combination of the two elements of *fact* and *intention*, so, by the dissolution of these elements, or by the *contrary fact* and *intention*, it may be lost or extinguished."—Dig. XLI., 2, 8. 1 Phill. §223.)

VIII. SUCH POSSESSION AND OCCUPATION MUST BE CONTINUAL.—It is not only true that disc very alone of such uninhabited isle vests no title, (but an *inchoate* right to acquire one,) and that occupation by the discoverer is absolutely necessary, but it *must be continued*, in order to maintain any title in the discoverer, or the State to which he belongs, and the right of sovereignty or eminent domain in such State, is inseparable from and dependent upon such actual occupation.—(See 1 Phill., § 230, p. 246, § 283, p. 207; Grotius, lib. 2, c. 9, lib. 3, c 9, § 9; Bynk. *de dom mar;* Eug. Ortolan, *dom. Int.*, Vattel, §§ 241 to 246, pp. 187 to 190; Charters' book VI, c. 8, § 2.)

IX. ABANDONMENT OF OCCUPATION AND USE DESTROYS CLAIM.—Of course this means a voluntary abandonment. The authorities show that if the occupation or possession is abandoned by the first discoverer, or the exercise of jurisdiction discontinued by a state, any subsequent discoverer may occupy and possess the abandoned and *derelict* isle, and the rights of proprietary in him, and of sovereignty or eminent domain in his state, vests from commencement of *his* occupancy.—(See Vattel, supra, and other authorities last cited. 1 Phill., §§ 259, 260., pp. 279, 280, the case of the island *St. Lucie* in 1754.)

In this case the English had abandoned the island, they said, through violence. The French said the abandonment was *amino et facti* and *sine spe redeundi*, and therefore France had taken possession of it. It was regarded as a case of voluntary dereliction and the possession returned to the class of vacant unowned territories.—(See 1 Phill., p. 307, §284.)

X. FACULTY OF ACQUISITION BY THE UNITED STATES OF SUCH ISLE BY DISCOVERY, &c.—The federal government of the United States possess this faculty as inherent power necessary to it, and an attribute of every sovereign State, and it possesses it equally and fully as any other sovereign power. The Constitution contains no prohibition against the exercise of such power. It is appropriate to it, and in the distribution of the various powers between it and the State governments, unless it is impliedly excluded, it is to be considered as possessed by the United States.—(See U. S. *vs.* Canter, &c., 1 Peters, S. C. R., p. 542, &c.; Vattel, § 4, p. 2, § 13, p. 3; Elliott's Debates, vol. 4, p. 207; Wheat., 45, *Elm. Int. Law*, Ib., p. 210. Ib., p. 78, note; Story *on the Constitution*, vol. 3, p. 156, and the cases there cited: New edition, § 1282 to 1289, § 1339.)

The acquisition of Louisiana, Florida, Texas, California, New Mexico, and the Messilla valley, can only be sustained as constitutional on such ground. The treaty-making power and the war-making power were invoked to sustain these acquisitions, and it was contended they were included in the legitimate exercise of those powers.

The legitimate exercise of those powers, thus construed, involves the admission that the faculty of acquisition in any other mode, not forbidden by the law of nations, or by the federal Constitution, is equally possessed by the United States. No one will contend that there is any illegality in the act of discovery or occupation by the United

States, of vacant lands, or a desert island, with *respect to other nations*, that have no right thereto.

The question, therefore, comes back to the consideration whether there is any prohibition in the federal Constitution.

And the power to regulate the intercourse with foreign nations, commerce, navigation, &c., and to maintain and provide a navy, &c., may be invoked with equal force to sustain the faculty of acquisition, by discovery, in the exercise of those powers, as the treaty and war-making power can can be appealed to to uphold an acquisition by purchase and cession, or by conquest.

So can the power to admit new States be invoked, and there is no distinction in the Constitution between new States formed out of Territories *ultra mare*, on an isle or island on the high seas, and such states created out of adjoining portions of this continent. The power can be exercised as legitimately with respect to all the Antilles, or the Sandwich Islands, as with respect to Canada, or Mexico, or New Albion.

Besides, the federal government of the United States, in its dispute with Great Britain respecting the possessions claimed by both on the Pacific, (Oregon,) presented and urged in the diplomatic correspondence, in executive documents and in the debates in Congress, our prior discovery by Captain Gray, master of a merchant vessel of Boston in 1792, and Lewis and Clarke's explorations in 1805–6, and occupation under them of that region.

And in no American document on that subject, nor in any speech in Congress, has any denial of this power of acquisition by discovery been found.—(See Wheat. *Int. Law*, p. 229; Greenhow's *Oregon*, pp. 418, 427, 449, 466 app; I Phill., p. 250, § 233, Ib., p. 247; *British State Papers*, vol. xiii, pp. 506–7–8–9; *Cong. Doc.*, 1st sess. 20th Cong., No. 189.)

Voyages and expeditions for discovery have been several times undertaken by the federal government; sometimes by previous authority of Congress, by special appropriations for such objects, and sometimes by the executive department alone, in the exercise of its authority over the army and navy, without the previous express sanction of Congress. Amongst them may be mentioned Lewis and Clarke's expedition to the Columbia river; Pike's expedition; and Colonel S. H. Long's expeditions; and Colonel Frémont's expeditions; Lynch's expedition to the Dead Sea; Strain's expedition; Herndon's and Gibbon's expeditions; and Wilke's exploring expedition; Ringgold's surveying and exploring expedition; and Commodore Perry's expedition; and the aid afforded by the government to different expeditions to the north pole region. The history of our government is replete with such examples

Some of these expeditions were essentially voyages for discovery or exploration out of the limits of the United States.

It is absurd to concede to the executive government constitutional power to undertake them, and that such prerogative is a mere naked, impotent or barren right, which can be productive of no results, beget no direct advantages, and which is utterly barren of any fruits beyond the credit of making such discoveries for the benefit of some other nation.

The framers of our glorious Constitution did not certainly, in our humble judgment, intend thus to emasculate the federal government, and make us the only *eunuch nation* on the face of the earth.

History furnishes some rare examples, such as in China, and Japan, and the Germanic confederation, of the abnegation of sovereign rights, but Vattel says, "that a nation ought to act agreeably to its nature," &c., p. 3, §§ 13, 14, et seq. (*Droit des Gens.*)

XI. IF FACULTY NOT IN THE UNITED STATES, IT REMAINS IN THE STATE OF DISCOVERER.—If this faculty is not in the United States it must remain in the State of discoverer, which in this case is Massachusetts.

The full attributes of sovereignty possessed by every independent State are possessed either by the federal government or by the respective States; for they cannot die, or be extinguished or alienated, without the consent of the respective States, either impliedly or expressly given. The States possessed them originally.—(See Vattel, p. 30, §§ 60, 271; 1 Phil., p. 147, § 125; 4 Cranch, 212, McIllvane *vs.* Coxe.)

It would not be appropriate to the functions of a State government *now* to possess them. It would be inconsistent with other powers delegated to the federal government for each State to possess them. To allow a State to acquire territory in any mode would not be in harmony with the principles upon which the federal Constitution was based. It might be a mode by which the clause respecting the admission of new States could be evaded. For instance, Texas might find it convenient to annex Tamaulipas; Maine, New Brunswick; Michigan or New York, Canada; and Florida, the Bahamas and Cuba; and if the government and people of those countries assented thereto, this might possibly be done *by a mere act of the State legislatures*, without contravening that provision of the Constitution prohibiting the States from making treaties and compacts, &c., with foreign nations, and among themselves, and thus extend their limits without restriction.

Article X of the amendments to the federal Constitution declares, that "the powers not delegated to the United States by this Constitution, nor prohibited in it to the States, are reserved to the States respectively, or to the people."

If, therefore, the faculty and power in question has not been delegated to the federal government, as contended, it is yet possessed by each State, *and the power to enlarge its boundaries ad libitum, in the mode suggested, is still possessed by each*, and in this case is possessed by the State of Massachusetts, to which we, as well as Captain Gibbs, belong.

This argument is used to show the effect and result of denying to the federal government the faculty and power referred to.

But this is a question as respects our own laws, and with which no foreign government can interfere. It is none of their business. We can settle this question among ourselves and by ourselves. Whenever any difficulty arises, and even if a State has the right referred to, when the claim of a foreign power is interposed, it is a constitutional function, and it is the duty of the federal government to enforce such

right.—(See Vattel, Lib. 1 C. 3, §§ 36, 47.) This authority is indisputable.

XII.—EXECUTIVE MAY ENFORCE AND MAINTAIN PUBLIC AND PRIVATE RIGHTS RESULTING FROM DISCOVERY AND OCCUPATION WITHOUT ACTION OF CONGRESS.—The faculty of acquisition by discovery being so possessed by the federal government, no special act of Congress is necessary to enable the Executive to exercise the acts necessary to give effect to such faculty, or to entitle the United States to the benefits, or to reap the fruits of such discovery. It is appropriately an executive function and power, and from its nature and character does not call for previous legislation.—(Attorneys General Opinions, vol. 1, cited, 1 Phill., p. 243.)

If diplomatic action, or any measures (except actual *war*) as to a foreign State, is necessarily required for the maintenance and protection of the rights of the United States, or of a State, or of any citizen thereof, (whether they result from discovery and occupation of an isle in the high seas,) and in all cases the preliminary proceedings are an executive function. The regulation of our foreign intercourse, and all diplomacy, is a constitutional executive function, and not a legislative duty.—(See Kennett *vs.* Chambers, 14 Howard, p. 38; Wheat. Int. Law, p. 35.)

Congress may not rightfully interfere with it, except by express law, and cannot control it even then beyond certain limits. The Senate may refuse to ratify a treaty, and both Houses or either House may refuse to vote appropriations; and in some cases it might be proper for Congress to adopt advisory or directory resolutions, and in others condemnatory resolutions; but in these last cases such action is not constitutionally imperative in the Executive, and the constitutional propriety of withholding appropriations by the House has been strongly questioned.

The laws of nations are a part of the laws of the United States, which the President has sworn to see are "*faithfully executed.*"—(Wheat. Int. Law, p. 514.)

The rights of the United States, and of the discoverer who belongs to her, in virtue of such discovery and occupation of a vacant isle, are founded upon the laws of nations, and the Executive is as much bound to enforce and maintain them as he is to enforce and maintain the exemption of our vessels on the high seas from visit and search, which is also guarantied by the *jus gentium.*—(Vattel, book 2, c. 6, § 72, p. 161; Ib., lib. 1, § 17, p. 5; Ib. p., 392, § 205.)

XIII. THE NON-EXISTENCE OF ANY RESTRAINING OR DIRECTORY LAW LEAVES PLENARY POWER WITH THE PRESIDENT.—The absence of any statutory prohibition or direction as to the course to be pursued by the Executive is an implication that Congress intended to let the rights of the United States and of its citizens, resulting from the discovery and occupation of a vacant isle, in virtue of the laws of nations, to stand upon the laws of nations, and that the executive maintenance and protection of those rights should be according to the principles of international law. Any fetter or restraint upon the executive powers (admitting that Congress can impose it) must not be implied. The intention to do so must be manifested by express law enacted in due

form.—(As to President's power, see 5 Wheat. app. Marshall's speech; 1 Gallison's Rep., p. 563; 3d vol. Opinions Attorneys General, p. 28; 7 Howard, 1; 13 Peters, 489; and 12 Wheat., 19; 9 Cranch, 126.)

XIV. DISCOVERY BY PRIVATE CITIZEN VESTS RIGHTS IN UNITED STATES.—It is entirely immaterial whether such discoverer is a *private citizen or subject*, or a commissioned officer of a State. The same rights, in either case, vest in the State to which he belongs. Vattel only refers to discoverers furnished with a commission from their sovereign; and this was the British argument in the Oregon case; but the United States do not hold to such opinion, and Great Britain has not always held it. There are two cases of discovery and occupation by private citizens or subjects, in merchant vessels, that are now recollected as having been contended for as the foundation of right, one by Great Britain and the other by the United States.

The first is the celebrated case respecting Nootka Sound, in 1790, in which a Mr. Mears, a half-pay lieutenant in the British navy, out of service, and sailing a Portuguese merchantman on a private adventure, sailed to and occupied Nootka Sound, which, it was said, as well from his discovery and occupation as from prior British discoveries, belonged to Great Britain.—(32 An. Reg., 1790, p. 285, &c.)

It will be seen by an examination of the Nootka Sound case, that it resembles the present closely. The place had been discovered and was known when Mears occupied it. Spain had been its actual occupant, but it had been abandoned. Some time after Mears settled there, a Spanish vessel-of-war captured his vessels, and drove him away. The vessels were, however, subsequently restored by the viceroy of Mexico. Mears appealed to the British government for redress, and it was rendered forthwith.

The promptness and energy of the British government in that case affords a wise example for all other nations that have the ability and disposition to maintain their rights.—(See British An. Reg. 1790, pp. 185, 305; Ib. 1791, pp. 208 to 227; "Gentleman's Magazine" 1790; Greenhow's Oregon, p. 446, and app.)

The other case was the discovery, by Captain Gray, in 1792, of the mouth of the Columbia river, he being master of a whale ship. He was a citizen of the United States, and his vessel was an American vessel, and upon his discovery and occupation, and upon continued occupation by Mr. Astor's employés and others, citizens of the United States, the United States based its right to all that region of country.

It is true it contended for the right upon other grounds also, but this specific ground was maintained, and Great Britain, then remembering to forget the *Mears case*, and many other similar cases, questioned the principle, that the uncommissioned Yankee skipper of a private merchant vessel could lay the foundation of such a right, and Dr. Phillimore observes with no little naiveté, (vol. 1, p. 251,) "If the circumstances had been these, viz: that an actual settlement had been grafted upon a discovery made by an authorized public officer of a nation at the mouth of a river, the law would not have been unreasonably applied," § 336.

Other authors and statesmen have maintained the principle, that upon a discovery by a private citizen or subject, the same rights enure

to his State as if he was a commissioned officer, and no one has questioned the principle, that if adopted by his government by occupation under its authority, such rights enured as if the discovery was by an officer. Even Dr. Phillimore acknowledges that adoption by a State, on discovery by a private citizen,* (1, p. 242, § 224,) and he also admits that the individual has a natural title to be undisturbed in the possession of the territory which he occupies, as against all third powers.—(Ibid., p. 242.)

And if such discovery was of a vacant, uninhabited island, the occupation and possession by such private citizen or subject, being necessarily peaceful and unopposed, is to be considered that of his government. And it is entitled to the same rights of sovereignty and eminent domain from the inception of his occupation, as if it was by express authority and commission.—(See authority above cited; Vattel, §§ 203 to 209; Ibid., lib. 2, c. 7, §§ 96, 97, 98.)

The cases upon the subject of captures by private subjects or citizens of a State, in time of war, of an enemy's property, on land or on the sea, wherein such private citizens or subjects are not expressly commissioned, nor otherwise expressly authorized to make such captures, are pertinent to the point now under consideration.

By some eminent jurists it is held, that the public declaration of war is a sufficient commission and authority to every citizen or subject of the power making it to capture the enemy's property wherever found, in the name of and for his government, and that his personal interest therein is dependent upon the prize or booty acts of his State.—(See 8 Cranch's Rep., p. 210, United States *vs* Brown; Vattel, lib. 3, c. 15, §§ 223 to 228; Ibid., 164, p. 365, and 202, p. 391, citing French Law; Kluber, *Droit des gens*, § 267; Wheat. Int. Law, p. 430, § 8; 2 Wheat's Rep. app., note 1, p. 7; De Pistoye and Duvardy, *Traité des Prises Maritimes*, lib. 4, ch. 1, p. 164, citing Merlin *Répertoire, Vol. Prise Maritime*, § No. 4. Decision of French Council of State, 31st May, 1807, "*la Vièze du Rosaire.*")

The question as to his private interest in the proceeds of the captured property is one of local and domestic law merely, and if allowed no share, it neither impairs the right of his government nor the legality or validity of the capture. The right of the government enures equally as if he were a commissioned officer, and the prize courts that have denied his interest in certain cases, unless allowed by express acts, have, nevertheless, maintained that of his government.—(See Vattel, lib. 2, c. 2, §§ 96 to 98, p. 170; 13 Johnston's Rep., p. 276; 1 Gall. Rep., p. 563; 2 Wheat., 76; 5 Ib., 338; 6 Ib., 1; Ib., 306; 9 Cranch, 55.)

XV. RIGHTS AND INTERESTS OF CITIZEN DISCOVERERS.—When the discoverer is a commissioned officer of the State, ordinarily, no *private rights* result to *him*, personally, from the discovery; but when he is not such officer, but a mere private citizen or subject, he acquires a right of pre-entry into property in the territory and appurtenances *paramount* over that of any other subject or citizen of the same State,

* 6 Rob. Rep., 364, *The Rolla*—a case of adoption of a blockade.

and *excluding positively* all claims of any *foreign* subject or citizen of any *foreign State.*

We admit his personal right is subject to such general regulations and restrictions as the *laws of his State*, then in force, or such special regulations and limitations as his State may prescribe in respect thereof; but without either such general or special regulations, his right of possession of the land discovered by him, in a small and uninhabited isle in the high seas, extends over the entire island so discovered, and its appurtenances.

This is, however, a question between him and his own government, and in this case Venezuela has no right to meddle in it.

In this very case the records of the department will show that it has recognized and adopted the doctrine that a discovery and occupation by a citizen vests title; and it declared that "*if the authorities of any foreign government should attempt to prevent or interfere with a discoverer* (though a citizen) *in taking guano from the Aves island, they will be expected to assign sufficient reason therefor.*" This declaration, though made to parties not discoverers, settles two points: first, the doctrines now contended for as to citizens; and, second, the adoption of such discovery by the government—by the act of the Executive.

XVI. EXTENT OF OUR RIGHTS IN THE PRESENT CASE.—Inasmuch as no restrictions or limitations exist by any law of the United States as to our rights in this case, they extend to the whole isle, and the guano upon it; and until the declaration or establishment of limitations of such right by *law of the United States*, duly enacted, or at least by executive authority, the federal government is to be deemed as *acquiescing* and *confirming* them to their entire extent. This is, however, a question in which Venezuela has no concern.—(See Vattel, lib. 2, c. 4, § 54.

XVII. A DISCOVERER HAS NO RIGHT OR POWER TO ALIENATE RIGHTS OF HIS STATE, OR HIS OWN, TO FOREIGN POWERS, AND ADMISSIONS BY HIM TO SUCH EFFECT ARE OF NO FORCE.—A discoverer has no right or power to alienate, or transfer, by his personal act, the right of sovereignty or eminent domain acquired by his State, and vested in it by his discovery and occupation, and such act is illegal and utterly void.

And *a fortiori*, no admission, or connexion, or compromise by such citizen or subject can affect the rights of his State, so acquired, and vested by his discovery and occupation as aforesaid; and that, without express authority from his government, he is incompetent to relinquish his own rights and possession (those of his State being based upon them) to any *foreign government* whatever.—(See Bard., p. 239.) Individuals cannot prejudice rights of States by their acts.—(Vattel, lib. 1, c. 21, § 261, p. 117; Ib. Lib. 1, c. 21, § 261; 2 Phill., p. 52, § 49; 1 Ibid, p. 145–6, §§ 122–3; Bynk., p. 223, § 239.) *Individual has no power to alienate or impair in any mode public property or rights.*—(Puff. Lib. 3, c. 7, ar. 11, p. 334.) "Subjects cannot contract, either among themselves or with others, and prejudice the duty and allegiance they owe to their lawful sovereign."—(Note in supra from Grammond's Hist. Gal., l. 5.)

As to *admissions*, three cases are recollected that are somewhat per-

tinent. On the 25th of December, 1814, Mr. Gallatin, United States commissioner at Ghent, wrote to the Secretary of State, making admissions against the title of the State of Massachusetts to territory on her northeastern boundary. His letter was published, and the British government afterwards brought it up against the United States in the arbitration before the King of the Netherlands.—(See letter, p. 24, British statement, note; and see also Mr. Gallatin's reply, in the most sarcastic style, and severest terms, pp. 94–5, American statement.)

It is worthy of note, also, that in this reply Mr. Gallatin denies the right of the federal government to cede any portion of the territory of a State.—(See northeastern boundary document, cited above.)

Another case was when Mr. Pinckney, our minister to Spain, in 179–, made an admission with respect to the boundary of Louisiana and West Florida, which Mr. Pizarro, Spanish Secretary of State, cited to Mr. Erving, our minister, in 180–. Mr. Erving replied that the admission was of no validity, being his own opinion merely, not authorized by the government to be made, except upon terms of adjustment then proposed and not accepted, and therefore was of no force.

The third case was that of Mr. Andrew Ellicott, United States commissioner to run the boundary between us and the Spanish provinces under the treaty of 1795. He made an admission respecting the same boundary between Louisiana and West Florida, which was also cited against us by the Spanish government; the reply to which was, that he was not authorized to make any such admissions, and that it was his mere private opinion, and was of no consequence.—(See Am. State Papers, Tit. "Foreign Relations," vol. 3, p. 520, etc.; Bynk. as to Sponsio, p. 223, and Wheat. Int. Law, p. 322, etc., and p. 329, (citing Ulpian;) Wheat., p. 473, § 24. Even in time of war the commander of a fort cannot stipulate for its surrender and perpetual cession—Vattel, lib. 5, § 156, p. 193; Kluber, § 142.)

We have a statute prohibiting a citizen from negotiating, corresponding, &c., with foreign governments on diplomatic subjects. (Act of June 30, 1799, 1st Statutes at Large, p. 603.)

XVIII. MISREPRESENTATION AND FRAUD VITIATE ALL CONTRACTS, &c.—Misrepresentations and fraud in all cases, either between individuals, or between an individual and a government, vitiate contracts, agreements, &c., and destroy the effect of acts and admissions procured from an individual thereby.—(See Vattel, lib. 2, c. 12, §§ 157–8–9; Kluber, § 143; Schmalz, *Eur Volk*, v. pp. 53, 54; Grotius, lib. 2, c. 17, §§ 18, 19.)

Signature to a written promise or agreement, written in a foreign language, and obtained by misrepresentation of its purport, is void, in all cases.

"Consent must not have been given in error, or produced by deceit, either by misrepresentation, (*suggestio falsi*,) or by concealment of [illegible] *ri.*)" 2 Phill. § 49, p. 62.—(See [illegible] p. 30, lib. 3, § 13; S. 2, p. 227, [illegible] 8, p. 281, notes 1 & 2; Stories. See Orlolan, v. 86.)

XIX. MISTAKE OR ERROR VITIATES CONTRACTS, &c., IF MATERIAL.—If the "agreement" is not void on the ground of fraud by Dias in obtaining it, it should be disregarded, and the admission of Gibbs and Lang thereon made should be disregarded as of no force, on the ground of mistake or error by them, as well in respect of the admission of their authority as agents to make such admissions or agreements, as also with respect to the title of Venezuela, and their relinquishment of the isle, guano and other property to her.—(Rep. Tenn. Hard. pp. 281-3-4-9, Gray and Baker.)

XX.—MISREPRESENTATION OR FRAUD BY A GOVERNMENT IN TRANSACTIONS WITH INDIVIDUALS, VITIATES CONTRACTS.—In cases of fraud, governments or princes are no exemption from the general rule. The misrepresentation or fraud is, of course, in every case of such character, practised by their officers or agents, for whose conduct the government is responsible. (See authorities above cited.)

Fraud is a canker that affects the contract and vitiates it, whoever the party perpetrating it upon the defrauded party. It destroys the contract, and makes it a *nude pact*, or no obligation or promise.—Whatsoever it touches, it kills.—(See Orlolan, vol. 1, § 85, p. 89. *The Columbus vs. the Redoubtable, conseil des Prises*, an ix, 1 De Pistoye & Duverdy, p. 356.)

XXI. CONSTRAINT FR COERCION BY MENACE OR THREATS OF A GOVERNMENT OR ITS OFFICERS DESTROYS CONTRACT OF AN INDIVIDUAL.—The rules of common law as to "*duress*," in contracts between individuals, apply with greater force to those made with governments.—(See Phill., last above cited, and other authorities sup. *The Esther vs. the Ligere, conseil des Prises*, an viii; *the Marie Suzanne vs. the Julie, conseil des Prises*, an ix & xiii, (De Pistoye & Duverdy, p. 354.)

Admissions, relinquishments, concessions, or other acts, or a declaration of consent obtained by a government or its officers, from an individual by coercion, or constraint, or by menace or threats of such government, or its officer, is, in no case, valid. The idea that fraud, coercion, or constraint, is not to be imputed to a government founded upon the false maxim of monarchists "the King can do no wrong," is not admitted to be law. The *fact* is unquestionably the reverse.

Kings and governments are not exempted from the effect of the fall of man. Both are mere human institutions, and "man is born to error as the sparks fly upwards."—(See Job; see history of all usurpations and wars from the time of David down to Louis Napoleon.)

Contracts made under duress are void, because they are not voluntary.—(See Roll., *Abr.* p. 688, Blcak.'s *Comm.;* Pothier *on Contracts*, Story *on Equity*, § 201, and cases there cited.)

Duress, as defined by the common law, especially in the early cases, was, being in fear of bodily harm, imprisonment and the like, from threats or menaces, or being then imprisoned; and apprehensions of loss of property merely was not sufficient. (See cases above cited.) In case of treaty, personal fear of actual violence by the representative of a State negotiating it, voids the treaty.—(Phill., p. 63, § 49; Wheat. *Int. Law*, 331.)

This strict rule, as just observed, is not adhered to in modern cases, but it is now generally held both by the civil and common law, that

any undue constraint operating upon the mind and will of a prudent man, though he may not be put in bodily fear, renders the act not voluntary, and vitiates it.—(See Kent's *Comm.*, part 5, § 39, and cases cited; 16 Vesey, p. 159; 1 Ibid, jr., p. 22; 16 Vesey, p. 159; 11 Ibid., p. 639; 1 Jacob and Walker, p. 96; 14 Vesey, p. 289; 2 Coke's Inst., 5 Rep., p. 149.)

In the case of a government, the rules should be still more extended, by reason of the fact that the very demand by a government, made through its officers, carries with it, to all law-observing men, the *constraint* of obedience. When such demand is imperative, backed by an armed naval and military force, commanded by a military and naval officer, and accompanied by threats and menaces, stated to be by order of the government, an act, agreement, contract, concession, relinquishment, or admission obtained thereby from the citizen or subject of another government, is void and of no force, as being given under duress. The law of individual contract applies to it, though it cannot be asserted as a well settled principle, that a nation can plead duress.—(See Wheat., p. 324; Kluber, § 142.)

It is sufficient if the party is constrained by apprehension of the power of such government being exerted to the injury of his rights, or his interests, in respect of property, the subject of contest, though such apprehension may not extend to bodily harm to himself.—(See Puff., lib. 3, c. 6, § 5, p. 281; § 10, note 3, p. 285, cites Plato.)

If he is constrained by apprehension or well founded belief of collision between such armed force and himself, or individuals associated with him, and that personal injury may result to any or either side, or that he may have imposed upon him the necessity of forcible resistance to such governmental authority and officers, and military force under the command of such officers, and may be obliged to overcome and capture such force, to do which he possesses the ability; even such constraint nullifies his acts of concession and his admissions, as not being voluntary.—(See Puff., lib. 22, &c., before cited, and *ut passim.*)

Besides, it is the duty of every law-abiding subject or citizen, enjoined by the principles of the laws of nations, ordinarily in such cases to yield to the demand of such foreign government, and if he is wronged, to appeal to his own government to obtain him redress.

It is upon this principle that it has been held that the hostile rescue by a neutral crew of a neutral vessel captured in time of war, by one of the belligerents, though the vessel may not be a good prize, if retaken again by captors of the same power, it is liable to confiscation for such recapture by the court of the belligerent power. (See Wheat. *Int. Law*, p. 455.)

The neutral resists at his peril, and such resistance has been held to divest him of his immunity from capture as a neutral. This is at least the British doctrine, though it may be questioned.

In this case, the intrusion of Venezuela by an armed force, and our eviction, was in time of profound peace between the two governments. By resistance, our employés could, doubtless, at the risk of bloodshed, have overcome and made prisoners Dias, his vessel, and his whole force. By refusing the provisions and water, in a few days we could

have starved them out, in all probability; but we were not only not bound to adopt any such means of resistance, but, on the contrary, it was our duty to limit our resistance to remonstrance and protest.

Vattel says, § 223, p. 399, that the unexpected attack of foreigners may be repelled on the ground of self-defence; but they are advised not to commit hostilities, even in time of war, without a commission.

And if to keep the peace, prevent probable bloodshed, or injury to our rights and interests, either with respect to our vessels, their cargoes, the isle, the guano thereon, or our other property there, or the welfare and safety of our employés, our agents were constrained to yield, as they did, their acts do not impair, or compromise, or weaken, or prejudice, or militate against our original rights because of such restraint. (See VATTEL § 325, p. 275; 9 CRANCH, 55.)

The intended effect of Dias' acts and the legal effect of his acts are the same—constraint of Gibbs, &c. and thereby his concessions were not voluntary.

XXII. ADMISSIONS BY AGENTS.—Admissions or agreements of an agent beyond the scope of his authority and its objects, and also sale, transfer, or relinquishment, or an extinguishment, or concession, or admission by an agent, cannot be allowed to destroy his principal's right to property intrusted to his care and management; and acts destroying or relinquishing such right or compromising it upon inequitable terms, are *prima facie* to be regarded as made without authority of his principal, and do not bind him. (See 2 PHILL., p. 63, § 49, citing VATTEL, lib. 2, c. 12, § 158; WHEAT., p. 332, § 8, citing ED. REVIEW, No. 154, ar. 1; GROTIUS *De Jure Bel.*, lib. 2, 14 §§ 4, 12; MARTENS *Prècis* lib. 2, c. 2, §§ 50, 52; Lee *vs.* Munroe, 7 CRANCH, p. 366; Wilson *vs.* Turner, 1 TAUNTON, p. 398; PUFF., lib. 3, c. 7, ar. 11, p. 304; U. S. *vs.* Gooding, 12 WHEAT., p. 460.)

An admission by an individual of a thing, of the truth of which he is not necessarily cognizant, and as to which he has no peculiar means of knowledge, though he be an agent, is not conclusive in any case, and if incorrect, as is the fact in this case, it is of no force whatever. (See Gen. Ins. Co *vs.* Ruggles, 12 WHEAT., p. 408; 1 DOMAT, p. 425, c. 3, ar. 1, § 1186 to 1192; IBID., p. 427, § 1146, § 1154.)

And this is so, whether as respects his own rights, or the rights of others. With regard to the rights of others, if of matters of fact, such admissions are considered as mere hearsay; they are not competent testimony either by the civil or common law, and whether oral or in writing; and if matters of law, or matters of fact and law mixed, as in this case, they are of no weight whatever.

If such agent knows any facts, he must be adduced as a witness by the party claiming under his acts, or seeking the advantage of his admissions. This is the law in cases between individuals, and it applies to governments. (See 10 VESEY, pp. 128, 763; 1 TAUNTON, p. 398, Wilson *vs.* Turner.)

The power of a proxy or agent must be limited by reasonable presumption of principle and objects. (DOMAT., article 1186, 1146, &c. General power not sufficient for alienation.)

If a party, whether a state or an individual, claims under acts or

admissions by one said to be the agent of an adverse party, he must give distinct and unequivocal proof of the authority to do the act, or make the admission; and such authority is never to be implied. (See STORY *on Agencies*, § 116; SMITH *on Contracts*, p. 347.)

Especially is this the law in a case of total alienation or relinquishment by an agen, of the property of his principal to such claimant, or as to admissions of a general character going to destroy his principal's rights, as such acts and admissions are inconsistent with the general delegation to use the property beneficially for his principal, and are ordinarily deemed invalid for want of authority, if full and special authority is not proved; and if in any degree inequitable, or made without equivalent received for his principal, will be deemed collusive and fraudulent, and void on that account. (See SMITH *on Contracts*, by RAWLE, p. 347 [249] citing many cases; Patterson *vs.* Tash, 2 STRANGE, p. 1178; Daubigney *vs.* Dural, 5 Term, 604; Martini *vs.* Coles, 1 Man., &c., p. 140, 493; Graham *vs.* Dyster, 6 ib., p. 1; 14 Quioroz *vs* Freeman; 3 BARN & CRESS, 343; Fielding *vs.* Rymer; 2 BROD & BING, 639. Such is recognized as the rule on this side of the Atlantic. See cases cited in SMITH, supra.)

In this case there was no equivalent or consideration for the alleged agreement. The pretended consideration or permission to stay as long as Dias or his government would allow them, was a mockery.—(See 2 Phill., p. 63, § 49.)

The agreement shows that it is a clear case of *lesion*, as well as constraint, and not reciprocal.

The permission to load three vessels was equally trifling, and its value depended upon the title of Venezuela, which is denied; and besides, these vessels did not load, and could not load, before they were ordered off peremptorily upon a few hours' notice.

These facts show that the "agreement" was not only in the inception, but in the end, a trick and fraud, "made to delude, and purposed to deceive."

The power and authority must be exercised according to the intention of the constituent General procuration or agency is not sufficient for alienation of property the agent was to preserve, nor for a recission of contract he was to execute.—(*Corp. Jur.* lib. 25, lib. 60, *D. de. Procur.* lib. 63, co; Master of vessel restrained to incidental power relating to ordinary employment of ships; Story *on Agency*, p. 35.)

XXIII.—CAPTAIN GIBBS' AGENCY.—He went out as master of the brig "J. R. Dow," and staid out on the isle as general agent to gather and ship guano from there.—(See instructions.)

He was not, whilst there, master of any of our vessels. As such general agent as aforesaid, he had no authority to relinquish or alienate the isle or guano, or to impair, or destroy or weaken, our title thereto, in any wise.

He was expressly prohibited from so doing, and instructed to resist certain anticipated intrusion by certain governments, specifically named, by force; and with respect to others not named, among which was Venezuela, he was instructed not to yield possession till they resorted to actual force, and made prizes of his vessels; and that he must resist to the extent of imposing such necessity upon them,

before he allowed them to evict him.—(See instructions in letter of 20th June, 1854.)

He had no authority as master of a vessel while there.—(See Story *on Agency*, § 116, p. 139, and cases cited ; Abbott *on Shipping*, p. 69, c. 3, § 2, and cases.)

It cannot be contended that any one at the isle had any authority, express or implied, from the government of the United States, to do anything in the premises.

No authority by us to relinquish the rights of the United States would have been valid if we had given it, and this for the reasons before stated.—(See ante, xvii.)

Lang was no agent of ours—was an interloper—hostile to our interests ; had intruded in violation of our just rights, upon the disclosure of Wheeler as to the discovery, and was suffered to remain because we could do no better without violence.

XXIV.—THE DIAS CAPITULATION OBTAINED BY THE COMPOUND MEANS OF MISREPRESENTATION AND FRAUD, AND CONSTRAINT, OR "DURESS."—1. *Misrepresentation and fraud.*—Captain Safford's deposition is conclusive on this point ; it is annexed, marked A. He says, Dias "*landed an armed force and took possession of the island.*" He says, Dias "*hauled down the American flag, and hoisted the Venezuelan flag in its stead.*" He says also, that, at the same time, Dias *threatened the immediate expulsion of all the Americans on the island.* This was on the 13th of December. He says, "finally, that the said Captain Dias drew up a document, in Spanish, which he said was a permit for them to continue to load guano, provided they placed their armament under his control. I was present when the purport of said document was explained to Captain Gibbs, (who did not understand Spanish.) *As explained, it was simply* that Gibbs and Lang were to assist the garrison *left* on the island with *provisions and water*, and the most *positive assurances* were given them *that the document contained nothing whereby they assented to the title of the island being in Venezuela.* I am *positive* on the point, as Captain Gibbs asked my opinion in reference to it. And I further certify that said Dias insisted that, unless they signed said document, they must leave the island *forthwith.* Captain Gibbs, under the circumstances, felt compelled to sign the document, hoping, by so doing, they would allow him to load the vessels there, and those expected, saying to me, that if the document contained anything different from what had been explained to him, he did not suppose a paper signed under such circumstances could be considered as of any binding force."

Other depositions have been filed by other parties, but we do not present them or rely on them at present. The "agreement," upon its face, is stamped with the characteristics of fraud.

Its being written in Spanish, no written translation being given by Dias—the certificate or permit given by him to Gibbs and Lang not being signed by any person but himself, though written as if Gibbs' and Lang's signatures were to be affixed—and all the circumstances about it, indicate fraud, if we had not produced this direct and unequivocal proof by a respectable and impartial witness.

The character of the stipulation is, of itself, evidence of fraud or of

force being used, or of both combined, to procure the signatures of Gibbs and Lang. Gibbs did not understand Spanish; and if others besides Dias deceived him as to the contents of the paper, it does not strengthen its validity.

It may be observed that the inconsistency of this document with Captain Gibbs' instructions, and with his bounden duty, and with his fidelity, which is unquestioned, are strong circumstances, if not sufficient of themselves to justify the charge of fraud, to corroborate and confirm the direct testimony on that point.

2. *Constraint and force, or duress.*—The testimony of Captain Safford is equally conclusive on this point. Duress, according to the common law definition—that is, threats of imprisonment or other bodily harm, or putting a party in fear, &c., may not be proved, nor is it necessary that it should be, as we have shown, (see xxi, supra,) but that constraint was induced by Dias being the officer and representative of his government.

XXV. THE ONUS PROBANDI AS TO TITLE RESTS ON VENEZUELA.—We were in peaceable possession, and the isle was invaded, and we were ejected by armed force whilst in the enjoyment of that occupation. We had been notoriously in possession for several months—the American flag had been flying there during all that time—American vessels had been continually there, lading guano, and voyaging from thence to the United States and elsewhere.

Right of possession is sacred.—(See Vattel, § 325, p. 168, §§ 88, 90; 1 Phill, p. 272, § 253.)

The admissions or acknowledgments of agents without authority to make them, or relinquishments, equally invalid for the same cause, as well as others, should not exonerate Venezuela from the duty of producing on demand, by the United States, the full original proofs of her title, upon which she tortiously assumed such possession, and evicted us. If those admissions are of any validity, the rule is the same; and indeed, between sovereign States, the honor of the State, outraged by such forcible invasion, demands *that the statu quo ante bellum* (for it was an act of *war*) should be restored, and indemnity made, and apology given, before any discussion of title can be entertained.—(See Vat, lib. 6, 2, c. 18, § 337.)

Possession is *prima facie* evidence of title.

XXVI. VENEZUELA BOUND BY THE CONSEQUENCES OF THE FRAUD AND MALCONDUCT OF HER OFFICERS, AND, HAVING AVOWED THEM, CANNOT CHANGE THE ISSUE.—Venezuela is estopped by the acts of her officers, having adopted them. She adopted them by producing the agreement or capitulation of Dias. (See Vattel, p. 160 to 163, lib. 2, c. 4.)

She is responsible for the deceit, misrepresentation, falsehood and fraud, as well as force and constraint, or duress, by which that paper was obtained; especially as upon its face, upon the first blush, these characteristics are manifest. She must have known of them, for its very form and stipulation are circumstances pregnant with fraud and force.

The fact that she has chosen to rely upon the capitulation and admissions therein, instead of giving proof of her discovery and actual occupation, is suspicious.

And if anything else was wanting, the official report of Dias, of his exploit at Shelton's isle, in the *guano war*, of his victories on that bloody field of arms, of his capture of our artillery, of his contributions levied upon us for provisions and water, of his hauling down the Yankee flag—if we could procure a copy—would be conclusive.

We have called the isle a *bloody* field of arms, not because any *American* blood was spilled there, but an account of the *felo de se* of a Venezuelan soldier, in the *feu de joie* by which the hoisting of the Venezuelan flag was saluted.

We trust a copy will be procured by our minister, as we learn that it is an interesting historical document.

XXVII. FORM OF RELINQUISHMENT BY AGENT IMMATERIAL.—It is of no consequence what the form adopted, except in so far as its form and contents indicate its character, and the means adopted to obtain it. A parol relinquishment or verbal admission, if otherwise unexceptionable, would have been as valid as if the form of a public treaty by national representatives had been adopted; or if Gibbs had executed a deed of indenture, or deed poll, or technical release in due form of law, signed, sealed, delivered and acknowledged before some judicial functionary, it would have been of no more force than mere tradition of the personal property yielded up, or the manual delivery of the vessels and artillery, and verbal acknowledgment of right and title in Venezuela.

All such acts would have been equally void. All such admissions, whether written or verbal, are ineffectual to impair our rights.

A convention or treaty between States may be by parol.—(2 Phill., pp. 63, 64, § 69; Kluber, § 1413.

All that is necessary is, that the declaration should be positive and real. The *consensus fictus* of the civil law is unknown to national jurisprudence.

We have before urged that the form that seems to have suited Commander Dias' fancy, that of a military capitulation by an agent and employé without the honors of war, (the United States flag having been forcibly hauled down by Dias on his storming the isle, their artillery and armanent demanded, and themselves obliged to engage in aid of the Venezuelans, is *significant* of the force and coercion employed by Dias, and the *constraint*, "under the circumstances," which induced Gibbs to take the *permit* (with the misrepresentation and fraud also practised,) and to yield his signature to that capitulation.

XXVIII. INSULTS TO THE UNITED STATES BY VENEZUELA, AND OUTRAGES UPON OUR PERSONS AND PROPERTY, IN THIS CASE, A JUST CASUS BELLI.—It is forbidden by the laws of nations for one State to attempt to tamper with the citizens or subjects of another, not authorized by their State to do the act sought to be obtained.—(See Vattel, lib. 1, c. 4, § 75, p. 33; Ibid. lib., 2, c. 4. § 54, p. 154; Thompson *vs.* Powells, 2 Simons Rep., p. 294; Taylor *vs.* Barclay, Ib. p. 213; United States *vs.* Palmer, 3 Wheat. Rep., p. 610; *Santisima Trinidad,*" 7 Wheat., p. 283.)

Especially is it an affront to the United States, and an act forbid-

den by the *Jus Gent'um*, for a State to arrange with a private subject or citizen in respect of his possession of discovered territory, or his rights thereto, in order to impair or defeat the rights of the United States so acquired and vested. It is seeking to withdraw them from their rightful allegiance and loyal duty.—(See Vattel, lib. 2, c. 4, pp. 160–1, §§ 71–2, &c.; Ib. lib. 2, c. 4, p. 154, § 54 and supra; Ib., lib. c. 18 p. 274, § 323, &c.)

The resort by Venezuela, without notice to the United States, to armed force, to oust us from the peaceful possession of Shelton's isle, assumed peacefully and enjoyed uninteruptedly by us, after the discovery of guano thereon, and the hauling down the United States flag, without having previously applied to the federal government, was an outrage upon and insult to the United States, and it should demand prompt reparation and atonement; and this demand should be made, and compliance with it insisted upon as a preliminary or proemial condition, before considering the question of title.—(Vattel pp. 575–6, before cited.)

This atonement and reparation should be: 1. Restoration of isle to *status quo ante* the eviction; 2. Indemnity to us for our damages; and 3. Apology to the United States, and saluting our dishonored flag, as we did the Spanish consul's at New Orleans, and as France insists we shall the French consul's at San Francisco. [This is the precise course of the British government in the case of Mears at Nootka Sound, and to which Spain was constrained to accede, to avoid *war*.]

And in Mears' case, too, it is questionable if the ships seized by Spain were not Portuguese, though the British flag was used; and in that case, also, the ships had been given up by the Mexican Viceroy on the Pacific coast, before the demand was made.—(See Greenhow's Oregon, page 466 and app.; British An. Reg., 1790; "Gentleman's Magazine," 1790; "British State Papers.")

Many similar instances can be referred to in the history of nations, within the past century.

See the case of the Falkland Islands;* its seizure by England during last century, and also recently, in violation of national law, and the discussions upon that subject, in illustration of the true principles of international law, violated by the British in both instances.†—(See Wheat's Int. Law, p. 220.)

Shelton's isle being a desert and uninhabited isle in the high seas, upon its occupation and settlement by us, and our ships being there with the flag of the United States, and that flag being raised on the isle as an emblem of its sovereignty connected with such occupation, the isle became subject to the jurisdiction of the federal government,

* Discovered by Davis, Hawkins, et al., about the close of the 16th century. English French, and Spanish settlements made simultaneously in 1763. Spain then purchased French claim, and dispossessed England forcibly from port, and afterwards abandoned the island. English flag rehoisted, but subsequently abandoned. France and Spain acknowledged her right of sovereignty in 1774 In 1825 Buenos Ayres founded a colony under Durbein Vernd, who seized two American schooners sealing. His settlement destroyed by United States ship Lexington. The British government resumed possession in 1833, contending it had only been suspended. In 1845 incorporated by royal charter as British colony.

† See Dr. Johnson's Works, vol. 12, p. 123; 1 Phill., § 246, p. 262.

and subject to its laws, the same as were the vessels of the United States there; and any crime (murder or robbery and the like) committed upon it—certainly by any American citizen—would be punishable by said laws in the federal courts of the United States.

We conceive, also, the commission of a crime on the isle during that time, if by a foreigner, would likewise be punishable by those laws, and by the same courts.—(See U. S. *vs.* Davis, 2 Summer, 482.)

The fact that we were, at the time of the invasion of Dias, in full possession, and in the actual and peaceful occupation of the isle, and had been so for months before the outrage, and that it was notorious, and that no remonstrance was made by the Venezuelan government to our minister to that republic, or through their agent here, or otherwise to the United States, grossly aggravates the insult and outrage perpetrated by her authority—expressly avowed by her by the production of the Dias capitulation. And it is no palliation of this indignity, or excuse for this unjustifiable and hostile act, that it may have been stimulated by a combination of speculators, even though some were citizens of the United States; but, in truth, such circumstances heighten the enormity, and add to the effrontery of her conduct.

The duty of the United States in such case is laid down in the following cases:

Vattel pre. p. lv, note 1; also lib. 1, c. 23, § 283, p. 126; lib. 2, c. 2, § 21, p. 144; §§ 65 to 70, pp. 160–1; lib. 2, c. 18, pp. 275–6, §§ 323–8, pp. 279–80, §§ 332–3–4, p. 281, §§ 339–40; 2 Phill., § 31, p. 38, insult to flag.

XXIX. DAMAGES AND INDEMNITY.—With regard to our damages in this case, as heretofore presented, they are in no degree supposititious or hypothetical, or what are generally called incidental, consequential, or indirect damages. They are positive, certain, readily ascertained and liquidated, and immediate and direct:

1. The asportation and the detention of our personal property.
2. The loss by false freight, demurrage, and expenses of our vessels.
3. The obstruction to the labor and employment of our workmen at the isle, taken and sustained there at great expense.
4. Expenses of procuring redress, and interest or augmented damages for delay.
5. And further, we claim the actual value of the guano at the island at the time of the aggression, deducting only that which may remain there when the possession is restored to us.

We have evidence that since that time numerous vessels have been employed in carrying it off, under the authority of the Venezuelan government, upon payment of what is styled a "royalty," or under some contract with the government.

We are not bound by any improvident contract or arrangement that Venezuela may have made in this regard, as the limit of our damages; but, on the other hand, she cannot refuse to yield the full

---

The Raskebout *vs.* the Zinadon; Tribunal of Cassation 28 Tructidor, an 7.—Freght on restitution of prize for cargo carried is not paid by a tender of exports, but according to charter or bill of lading.

amount she has herself estimated the guano to be worth to her at the island, and, in addition, such sum as we may prove that it was worth to us.

She is bound to yield up, *at least*, the estimated fruits of her contract to the Philadelphia speculators, even though such estimate may not have been realized by their bad faith.

And again, we contend that in addition to these certain damages, we may justly claim of Venezuela, as indemnification for her tortious outrage and wrong committed upon our rights and property, all the profits we should have probably made by the shipment and sale of the guano, if they had not molested us.

And in addition to this, we claim, also, that evenhanded justice demands that they should indemnify us for the embarrassment in our business and to our credit, and the consequent losses we have incurred, which every merchant can understand and appreciate, and which we are prepared to show are of no trifling amount or moment; not merely has our prosperity been jeoparded, but it is yet uncertain whether it may not result in consequences still more serious; all the result of her unjustifiable *tort*.

Our only hope of redress is in the action of the President and yourself. And we have full confidence in the fulfilment of that pledge he made to the American people on the 4th of March, 1853, that "THE RIGHTS WHICH BELONG TO US AS A NATION ARE NOT ALONE TO BE REGARDED, BUT THOSE WHICH PERTAIN TO EVERY CITIZEN IN HIS INDIVIDUAL CAPACITY, AT HOME AND ABROAD, MUST BE SACREDLY MAINTAINED." * * * "HE MUST REALIZE, THAT UPON EVERY SEA AND ON EVERY SOIL WHERE OUR ENTERPRISE MAY RIGHTFULLY SEEK THE PROTECTION OF OUR FLAG, AMERICAN CITIZENSHIP IS AN INVIOLABLE PANOPLY FOR THE SECURITY OF AMERICAN RIGHTS."

With this we shall be satisfied.

If the isle *is not restored*, we claim *in the aggregate* $341,000 at least, leaving Lang and Delano and Wheeler and others to prefer their claims to the *moiety* of the island we have not *estimated* in said amount. The amount we claim is not one-third of the real value of the guano alone; and in case of the restoration, our damages, exclusive of the guano abstracted since the eviction, (which should be paid for,) should be estimated differently, and exceeds $85,000; for some of those damages in our claim filed, based *on the isle not being restored*, were estimated in the $312,500 charged for the guano, which we were willing to take as a *compromise*, if promptly paid, and let them have our interest in the isle and make the most of it, &c.

No. 3.

Testimony in case of the claim of Philo S. Shelton and Sampson & Tappan, against the government of Venezuela.

Interrogatories to be propounded to Captain Nathan P. Gibbs, a witness in the matter of a certain claim against the government of the republic of Venezuela, preferred to the Department of State of the United States of America, by Philo S. Shelton, and George R. Sampson and Lewis W. Tappan, merchants of Boston, in relation to

"Aves," or "Bird Island," now called "Shelton's Isle," in the Caribbean sea, and in respect of the guano thereon, in December, 1854, and of the eviction of said claimants therefrom, by order of said government of Venezuela, in the month and year aforesaid, and of the taking of the property of said claimants thereat by the same government, and of their damages and losses sustained by the same:

I. Are you, or not, a citizen of the United States? Where were you born, and where is your residence and domicil? What has been, and what is your occupation? and what is your age? and in what employment and where have you been employed for a year past? Please state fully.

II. What was your employment in the year 1854, and where were you employed? State fully.

III. Were or were you not employed by said Philo S. Shelton to go on a cruise of discovery in the Caribbean sea for guano islands? If so, state fully; and if you sailed on said cruise, when and where from, and what you discovered, and your conduct and proceedings thereupon; and please state the particulars fully, and especially in relation to Shelton's Isle, if any of them relate thereto; and to your taking possession thereof, if you did so, and describe said isle.

IV. What were your proceedings on your return to the United States; and did you, or did you not, make arrangements for returning to said isle for said claimants, or either of them; and if so, what arrangements were made? State fully.

V. If you did leave the United States for Shelton's isle, when did you so leave, where, and in what vessels, and for whom, and when did you arrive at the isle; and who, if any one, did you meet there, and in what vessel; and state all the particulars fully, and likewise your proceedings after your arrival at the isle, and the reasons therefor, and how you were employed for the first week or ten days thereafter?

VI. State if you did, or did not, continue in the undisturbed occupation and possession of said isle and of the guano thereon, for some time, and whether you were or were not employed in the gathering thereof without molestation for some time, and if so, for how long; and how much guano was there shipped, if any, during said time, and by whom, and what vessels, if any, were sent thither by claimants during said time for guano, and all the particulars of your occupation of said isle, that may be material in this matter; and whether you were visited by any foreign vessels of war, and if so, what vessels, and when, and what occurred during their visits; and whether your occupation was ever objected to by any, and whether other vessels visited the isle?

VII. When you landed first on Shelton's Isle, had you ever been informed of its being previously inhabited, or possessed, or occupied, or claimed by any person or government, or that any government exercised jurisdiction over it; and particularly, had you, or not, heard of such claim by Venezuela? Please state fully all your knowledge on this subject and any facts connected therewith, of which you have been informed.

VIII. When you visited said isle in April, 1854, did you, or not, examine it with reference to making an estimate of the guano thereon,

as to quantity and quality, and if so, what was your estimate? Please state particularly and fully, and also refer to any authenticated facts within your knowledge in confirmation or corroboration of your estimate; and please also state if you have heard any reports in relation to said guano differing therefrom, and whether or not they have affected your opinion as to your estimate; and state if you had, or had not, experience in respect to gathering guano.

IX. Were you, or were you not, visited on the 13th day of December, 1854, by a schooner of war of the Venezuelan government, and if so, state fully what occurred then and there, and all that passed between you and the officer commanding her? Relate all the particulars as fully as you can recollect the same, and particularly as to a certain paper stated to have been signed by said officer and yourself and Charles H. Lang, and how the same was given, and whether you knew the purport and contents thereof; and say also whether or not you were subsequently visited by an additional military force; and, if so, when, and whether or not you were evicted and dispossessed of said island and guano by said force, and of the property of your employers there; and if you were, state all the circumstances particularly and fully.

X. If you were compelled to abandon the property of your employers at the isle, state the kind of property and value as particularly as you can, and what you think was the cost and value to them of said isle, and answer particularly and fully.

XI. Have you seen a copy of the statement of the claim of the said claimants presented to the State Department, consisting of three items: one of $312,500, one for $20,000, and a third for $8,500; in the aggregate $341,000? If so, please say whether the same is, or is not, in your judgment, exorbitant or extravagant; and state anything in your knowledge having relation thereto, and showing whether the same is just or unjust, reasonable or unreasonable. State fully.

XII. Have you, or have you not, any interest in said claim, direct or indirect, immediate or remote, in any wise? How were you employed by claimants? Have you any feeling in the case? and state fully and particularly; and state also, in answer to this interrogatory, the names of any persons you may recollect that were with you at the isle in 1854.

H. J. SANFORD,
Attorney in fact for Claimants.

NEW YORK, *April* 2, 1856.

The answers of Nathan P. Gibbs to the foregoing interrogatories made before me, Joseph C. Lawrence, a notary public of the State of New York, residing in the city of New York, the said Gibbs being by me first duly sworn to testify the truth, the whole truth, and nothing but the truth, in said answers, and being also duly cautioned according to law. To each of said interrogatories he answers and deposes as follows:

HE ANSWERS TO THE FIRST.

I am a native citizen of the United States of America. I was born at, and my residence and domicil is, Wareham, in the State of Massachusetts. My occupation or employment is that of a mariner, and has been from my youth. I am about twenty-eight years old. I am at present master of the ship Marion, of Boston, now in this port, (New York.) I sailed in command of said ship in the month of April, 1855, from New York, and went to Havana, Matanzas, Marseilles, Genoa, Constantinople, Balaklava, (in the Black sea,) and thence to Palermo, and thence back to this port, where I arrived about the 15th of last month.

TO THE SECOND.

Prior to my taking command of the ship Marion, I had been for a long time in the employ of Philo S. Shelton, esq., merchant of Boston, in the United States, who was extensively engaged in the guano trade. In the early part of the year 1854, I commanded and sailed the brig John R. Dow, of Boston, owned, I believe, by him; and was also his superintending agent in the procurement of guano in the Caribbean sea, and also to aid him in the Gulf of Mexico, in which business said Shelton had at that time several vessels and many laborers employed at heavy expense.

TO THE THIRD.

Under said Shelton's instructions, and at his expense, and as his agent, and for him, I sailed in said brig John R. Dow on a cruise in the Caribbean sea, for the discovery of guano islands, leaving Baltimore in the month of March, 1854, and spent some time in making such discoveries amongst the desert keys or rock isles in said sea, several of which I visited; and whilst so engaged, early in April, 1854, (I believe the 6th day of said month,) I found Aves, or Bird isle, in said sea, (called since by Mr. Shelton "Shelton's isle,") being in about 15 deg. 40 m. north latitude and 63 deg. 38 m. west longitude from Greenwich. I personally landed on said isle, and staid there with my vessel one day, engaged in taking soundings and observations, and I made a sketch of said island and of the approaches thereto. I explored and examined it thoroughly, and ascertained it to be about 1,400 feet in length and from 350 to 400 feet in breadth, and from fourteen to sixteen feet above the ordinary level of the sea, and that it was a desert isle, not having any trees or herbage thereon, and was uninhabited, and that there were not any appearances or indications thereon of its ever having been occupied by men; and I was fully convinced from its appearance, that if it ever had been so inhabited, it had been entirely abandoned for a long time, and was what is usually called a derelict and desert isle. I thereupon, as far as I then could, took possession of said isle and of the guano thereon for and in behalf of Mr. Shelton, my employer, and he being a citizen of the United States, in behalf also of my government and country,

as I conceived I had full and lawful right to do; and in so doing I believed I was acting properly, and that thereby the jurisdiction over said isle became vested in the United States of America, and that Mr. Shelton acquired, in virtue of such premises, a right to take and appropriate said guano on said isle, and when in the actual possession thereof, was entitled to hold the same against and over all others who could not show a higher and better title than he had, or until forbidden by some law of the United States, or by the Executive of the United States in the fulfilment of legal duties. After fully examining said isle and the guano thereon, and taking samples of said guano, I sailed from thence on the 7th or 8th of April in said brig, and visited some other keys in said sea, and then proceeded with all despatch to Arenas and other guano islands in the Gulf of Mexico, where Mr. Shelton's vessels and men engaged in the guano trade were then chiefly employed. Captain James Wheeler was then superintending agent at Arenas for said Shelton, being in charge of said business there, and had the brig Cronstadt, the barque Thorndike, and the ship Lanark, and perhaps other vessels whose names do not occur to me, subject to him. I then informed Captain Wheeler in confidence, as such agent, of my discovery for our employers, and we despatched all Mr. Shelton's vessels there home as speedily as practicable, and I conveyed the laborers (some fifty odd in number) in the brig John R. Dow to New Orleans and discharged them, and abandoned the Gulf guano trade with the view of enabling Mr. Shelton, so soon as I could return to the Eastern States and get our vessels provided with proper materials and laborers, to go again to Shelton's isle and continue the possession thereof, and after erecting the necessary structures, to gather the guano thereon and ship the same to the United States, as I had by letter advised my principal, Mr. Shelton. The said Captain James Wheeler, however, who also went in said brig to New Orleans, immediately left said city in a steamer for a northern port, on his way to Boston, where, failing to induce Mr. Shelton to decide until I should arrive as to sending vessels to the isle and laborers under him as agent, gave private information to Lang & Delano of what I had communicated to him as agent of Mr. Shelton, in confidence, respecting Aves, or Bird isle, and the guano thereon, and persuaded them to fit out a vessel and send him thither for themselves.

TO THE FOURTH.

I arrived at Boston from New Orleans in said brig John R. Dow, about the 9th or 10th of June, 1854, and saw Mr. Shelton and Messrs. Sampson & Tappan, of Boston, the last named gentleman having been interested with the former, (they may have been interested before then, though I have no positive knowledge thereof,) and they all constituted me their chief superintending agent, to take control and charge of said isle for them, and to gather and ship the guano on the same according to their instructions, and said parties and myself made the necessary and proper arrangements to carry out said object. I was accordingly despatched about the middle, or perhaps the 20th of June, 1854, in the same brig John R. Dow, to Shelton's isle, there being also shipped by said vessel a large quantity of heavy timbers

and other lumber prepared and framed, and fitted in Boston, to be well fastened, in addition to wooden fastenings, with large iron bolts and braces and rods, which, with nails and spikes and tools, were also shipped by said brig, in order to erect a wharf or dock on the shore of said isle, at the place I had ascertained by my soundings and examinations to be most practicable. That said wharf, it was proposed, should extend upwards of eighty feet from the shore into the sea, and was to be constructed by placing or sinking into the sea upwards of twenty piers or horses, made of heavy timbers, framed and fitted, and to be well secured by fastenings and braces of iron as well as wood, and afterwards filling in the same with heavy rocks, to be obtained at the isle, and also by sinking such rocks around them as a support, and to protect them from the surf, and likewise by placing large stringpieces and heavy planks upon them securely bolted and spiked; all of which I had ascertained when at the isle in April was indispensable for a safe landing and for lading the guano on shipboard. There were also extra tackles and falls and cordage, and several extra water casks or tanks, and a large quantity of water, and also of supplies and provisions, (meat, fish, bread and breadstuffs,) and other articles necessary and proper for a large laboring force at said isle, purchased by said parties and shipped to said isle by said brig and by other vessels subsequently despatched thither by them up to the time they became apprized of my being dispossessed of said isle on the 26th of December, 1854, as will be stated by me hereafter, (which time, I believe, was about the 15th day of January, 1855.) That materials for the erection of several houses (say seven) were also prepared in Boston, and also materials for sheds and bunks, and upwards of six dozen good wheelbarrows, upwards of ten dozen shovels and several spades and grubs, upwards of six dozen picks, and divers hoes and other implements wherewith to gather the guano, and tackles and falls, spars, ropes, boards, nails, hinges, locks, and the like, more than four dozen baskets, and several large baskets or buckets, expressly made for the lading of guano; and several dozen other buckets and tubs, cooking and other utensils, the necessary articles for the proper accommodation in sleeping of the laborers, and medicine and other stores for the preservation of their health, were also sent at different times by said parties to said island; and likewise several extra boats and appurtenances were furnished by them for the convenient use of the persons in their employ there. My employers also sent two cannon (both six-pounders) and two dozen muskets, and twenty-five large pistols, and several Colt's revolvers, and twenty-five cutlasses, and twenty-five boarding pikes, and a large magazine of fixed ammunition, and also a flagstaff and United States flags for use on the isle. I took in the brig John R. Dow, the trip last mentioned, some twenty-seven or twenty-eight men, being mechanics and laborers, besides her crew, which consisted of fifteen souls; and from time to time afterwards said parties sent others out, so that, upon an average, in addition to the crews of the vessels there, we generally had as many as thirty-five men, and, with the crews, ordinarily not less than sixty men of the party under my charge, and by me employed on the isle after we got at work, up to the day of our eviction. There were

several females who visited the island during the time I occupied it, the wives of persons who came out in the vessels and stewardesses on board the vessels, and one or more families of children, who also came out in the vessels.

TO THE FIFTH.

After leaving Boston in June, 1854, I arrived at Shelton's Isle in the brig John R. Dow, on the first or middle part of the month of July, 1854, I believe on the 15th of that month. On the same day, Captain James Wheeler, before mentioned, also arrived there in the brig Mahala H. Connery, having been despatched by Messrs. Lang & Delano, merchants of Boston, as I understood from him, upon the information they had derived from him as to the existence of guano thereon, as before stated. Our vessels were in sight of each other when we made the isle, and there was not an hour's difference in the time of our arrival. On the next day went ashore in company with Captain Wheeler, and although I did not conceive that either he or Lang & Delano had, under the circumstances, any legal, or equitable, or rightful claim to any portion or share of said isle or the guano thereon, and regarded the attempt to appropriate the same to their benefit to be a wrong upon Mr. Shelton, yet to avoid difficulty, and for the sake of peace, and as there was sufficient guano for all, I agreed with him to divide the isle and guano, and accordingly we staked off our respective portions, and came to an understanding not to interfere with each other till I could hear from my employers, but leave the matter to be arranged and settled at home as the parties might deem advisable. Captain Wheeler had also, as I understood, brought out for Lang & Delano sundry materials and articles, though not equal in quantity or number, or in utility or value to those sent by Mr. Shelton and Sampson & Tappan. We immediately erected two liberty poles, or flagstaffs, and hoisted a United States flag on each, which were kept flying constantly by day. Both companies forthwith commenced erecting their respective structures, the two wharves being built near to each other. Several days were employed by all the persons at the isle in building wharves, during which time the vessels remained idle and incurring demurrage or losing time to the owners.

TO THE SIXTH.

I continued in the peaceful and undisturbed occupation and possession of Shelton's Isle, and of the guano thereon, as aforesaid, and was employed gathering and shipping guano therefrom, from the time I got the necessary structures erected, without molestation or objection from any one, until the 13th day of December, 1854. I had erected, besides the wharf, seven houses and sundry sheds, and covers for my water casks or tanks, and places for my provisions, and places of shelter for my workmen, and up to the time I was dispossessed, as I will state hereafter, I shipped for my employers to the United States, I think about 7,200 tons of guano. The guano so shipped was not selected as being of superior quality, but was gathered as was most

convenient for landing, because it was expected to ship the whole; and, in fact, the best guano was left on the island when I was evicted, and what had been shipped facilitated access to it. My employers sent, after I got ready to ship the guano, several vessels to the isle. I remember among them, besides the John R. Dow, the brig Cronstadt, of Boston, Howland, master; the ship Junius, of Hallowel, Erskine, first master, and afterwards Titcomb, master; the ship James N. Cooper, of Boston, Nickels, master; the barque Carlo Mauran, of Providence, Safford, master, (despatched from Liverpool;) the barque Amazon, of Bangor, Stubbs, master; the brig Viator, of ———, Ellis, master; and the brig Mary Pearce, of Bangor, Pearce, master; the barque Brilliant, of New York, Bailey, master; the barque Mary Smith, of Portland, Fitz, master, and others whose names do not occur to me at this time. Captain Howland, of the Cronstadt, and also his son, died on the passage between the isle and St. Thomas, and several of his crew died also. Some were buried at the isle, and also one of the crew of the ship James N. Cooper. All of said vessels belonged to the United States. I estimate the entire quantity of all the guano shipped by my employers from the isle as about 7,200 tons, and the entire amount shipped by Lang & Delano, including all who shipped under their authority, as not over 2,000 tons. During the time I was in possession of this isle, several foreign vessels visited us. On the same day, or the day after, Captain Wheeler and myself went ashore, a vessel passed near to us, bound to the Island of St. Thomas, and, as I ascertained afterwards, reported there our being in possession of the isle. A few days afterwards, and I believe on the first of August, an English man-of-war steamer, called, I think, the Devastation, and commanded by a naval officer, named, I believe, De Horsey, came down to ascertain our objects. The commander was very gentlemanly, and landed and made inquiry, and I concealed nothing from him, and told him of my intention to take the guano. He obtained some samples, and examined the isle. He appeared to be an intelligent man, and I sounded him as to his opinion, whether any government but my own could claim the isle, and he told me frankly that he thought not, and advised me to keep my flag constantly flying, and to keep possession. We were next visited by an armed French steamer, whose commander was also very polite, who also obtained samples of the guano, and who expressed similar opinions to those expressed by the British officer. Afterwards we were visited by a Danish ship-of-war, and her officers told us to hold on to the island, as no government within their time had ever occupied it or claimed it. Several merchant vessels of different nations, and I think another vessel-of-war, touched at the island that autumn and fall, before we were expelled, and no one expressed any doubt of our being in rightful possession. I would observe that no United States government vessel visited us during the several months we were at the isle.

TO THE SEVENTH.

When I landed on Shelton's Isle, I had not been informed that any person had ever inhabited, possessed, or occupied it, or that any gov-

ernment had ever claimed or exercised any jurisdiction or ownership over it in anywise, though I did then, as I do now, regard it as quite as probable that the isle had many times been visited, and that the egg gatherers from the islands of St. Thomas, Guadaloupe, St. Kitts, St. Eustatia, and other West India islands—the nearest inhabited regions to it—had visited it to gather birds' eggs for sale in the said islands, as is their practice in respect to most of the desert rocks or keys in the Caribbean sea, not possessed by any government; and that, in fact, as the said isle was without wood or fresh water, it could not be permanently inhabited by man for any long period, without supplies of those necessaries from elsewhere. I especially declare that I had never heard at that time, nor until the 13th of December, 1854, did I once hear it intimated that the republic of Venezuela had any claim whatever to said isle, or that the same was under the jurisdiction of said republic; and if I had so heard, I would have regarded such claim, as I did when I first heard it advanced, as utterly preposterous, insomuch as Shelton's Isle is more than two hundred and fifty miles in the sea distant from the nearest admitted possessions of Venezuela inhabited by her citizens, which is more than twice the distance said isle is from several of the long settled and still inhabited windward West India islands, possessed by the Danish, Dutch, French, and British governments, all much more ancient than that of Venezuela.

TO THE EIGHTH.

I made as full an examination of said isle when I first landed on it in April, 1854, as I deemed essential to ascertain satisfactorily to myself the quality and quantity of the guano thereon; and in several places on the isle I adopted means to find the thickness of the deposits with which the isle was covered. I had, as before stated, been formerly engaged for several months in the procurement of guano, and had acquired considerable experience therein, and I made up my mind as to the quantity of merchantable guano on said isle, and that there could be obtained therefrom, and laden on board vessels, over one hundred and fifty thousand tons, and that of said quantity at least one-half, or seventy-five thousand tons, might be classed as first rate guano; and that said estimate of one hundred and fifty thousand tons was exclusive of a large quantity which, from various causes, should not be classed as good, merchantable guano, although it was mostly of sufficient value to bear freight to the United States, at the prices such guano was selling for in 1854 in the United States. I deem it proper for me, in confirmation of the correctness of my estimate, to state that I have seen an extract from an official letter or report, purporting to have been made by the British naval officer I have before mentioned, dated August 1, 1854, which has been published in England and in the United States, and which purports to have been addressed to the proper functionaries of the British government, and in which it is stated that said isle had then upon it "*two hundred thousand tons of guano, but slightly inferior to the Peruvian.*" I have not seen nor heard anything since I made my first

estimate to make me suppose that it was in any degree extravagant, and, on the contrary, my subsequent examinations, and the knowledge acquired during several months' stay on the isle in the summer and fall, and till December 26, 1854, engaged in gathering the guano, satisfied me that my judgment in that estimate was not erroneous. I have knowledge of all the guano taken from the isle after I took possession in July, 1854, until my eviction by the Venezuelan officers, as I shall hereafter state, and I do not think, as I have before stated, it exceeded in the aggregate 9,200 tons; and I would again state, that the cargoes shipped were not selected or picked from the best guano, but were gathered as it was most convenient, as we expected to take all there was on the isle if the demand for it continued; and that, in fact, we took it as it lay, to facilitate access to the shipment of the best guano. I deem it proper to state here that I have heard that reports have been made, stating that the quality and quantity of guano on the isle were much less than my estimate; but that does not affect my conviction of its correctness, for I know that it requires practical experience with respect to gathering the article, to judge of the quantity that can be obtained from a place of deposit, and likewise experience and considerable skill to gather it advantageously; and I place limited dependence on the estimates of those called engineers, however able and scientific, if without such experience acquired by having been engaged in the business. From my knowledge of the business, a very large per centage is likely to be lost, in respect to quantity and quality for market, if gathered by inexperienced persons. After the business of my employers at said isle was broken up, as I will state hereafter, I received applications for my services to gather the guano on said isle and elsewhere, from persons connected with the Philadelphia guano company, which I declined, and several of which letters my employers have.

TO THE NINTH.

On the 13th day of December, 1854, a schooner-of-war of the government of Venezuela, commanded by Domingo Dias, an officer of the Venezuelan navy, as he represented, came to the isle, and said Dias landed, and stated that he came by authority of his government to take possession of the isle and guano, as belonging to that republic. He landed one cannon, and ammunition, and ten soldiers, armed with muskets and other arms, in charge of another officer, inferior to him. Dias told me that his government had sold or leased, or was about to sell or lease, the isle to a company in Philadelphia, in which company he said were interested gentlemen of great influence and high in office in both countries, who had united to make money out of the guano on the islands in the Caribbean sea, and that their influence was so powerful that it could not be resisted. I told him I had discovered the guano when the isle was derelict, and that I should not leave till I heard from home, as my employers had encountered very great expenses and much trouble in the business. From his conversations and representations I received the impression that it was probable the government of the United States had made some arrangement, and had

perhaps authorized the Venezuelan government and the Philadelphia company he spoke of to take possession of the isle and guano, and that it was likely Mr. Shelton and Sampson & Tappan were concerned in or with such company. I talked freely to Dias, and suggested that even if this were so that that fact furnished good reasons for my holding on to my possession till I heard authoritatively from home; and I finally told him, distinctly and unequivocally, that I would not leave the isle, nor cease gathering the guano till prevented by superior force, and that I would resist, and that he could not effect my expulsion with the force he had there. He then informed me that two other government vessels-of-war of Venezuela—one an armed steamer and the other a sloop-of-war—were coming over to the isle immediately with more troops, and that they had orders, if I had not complied with his directions, to expel me from the isle at once by military force, and to drive away all my vessels, and that he (Dias) was commander of the whole squadron, and that if he did not decide to expel me forthwith that he should leave the isle in a few hours, (leaving his soldiers there,) and if the other vessels came in his absence they would resort to military force to expel me, at all hazards; and after some time he told me that he was willing that I should continue to work till the Philadelphia company sent down, or till he could ascertain if my employers were interested, or procure the final decision of his government, and that it would be best to keep off all others, and if I would assist him in that he would give me a paper signifying my right to load the vessels there, and which would prevent all difficulty between me and those in command of the other vessels, and prevent them from attempting to interfere with me. I told him several times, distinctly and expressly, that I would not do anything to admit or recognize any right or claim of Venezuela to the isle or guano, or to compromise in any way the title of my employers, and that I had no right or authority from them to do so. I told him we were in possession, and had been so, peaceably, for several months, which title was good till somebody showed a better, and that his government, if it had any right, should bring the case before the federal government of the United States, and that if force was used I would resist, and appeal to my government for redress if I was overpowered. He assured me that he did not desire me to make any admissions as to the claim of Venezuela, and boasted that her title did not need them; and he assured me also of his kind and friendly feelings, and of his anxiety to avoid difficulty, and handed me a paper that he had drawn up, or had got drawn up, in Spanish, signed by himself alone, which, he said, in case he went away, would prevent the vessels-of-war of Venezuela that might arrive when he was away from molesting me. I did not understand Spanish, and did not know the contents of the paper. I took the paper for what it was worth, and without much inquiry at that time as to its contents, knowing, as it was not signed nor assented to by me, it could not do any harm. He then wanted me to sign a copy, which he had made out in Spanish, and which he had also signed, and said that he desired it to be signed by myself and Mr. Lang, (Lang & Delano's agent,) merely to show to his government in due form what he had done. I unequivocally and emphatically

refused to sign anything. I did not, as I have before said, understand Spanish, nor was there any one of my company who did. Dias professed to interpret and translate the paper to me. He said if I signed it he would leave the isle—the ten soldiers and officer already landed to remain there, and that the only thing that he asked of me, and that was in the paper, besides his orders not to molest me, was a statement that I would assist his soldiers with my men and cannon, and other arms, if occasion should arise, to keep off all intruders. He pretended to explain it word for word to me, and declared that there was not in it any acknowledgment of the right of Venezuela, nor anything whatever that could prejudice, or compromise, or affect the rights of my employers. I still refused, when he changed his course, and declared that unless I did sign it he would not leave the isle till he had driven me and my vessels away, and that he would forthwith resort to military force to prevent me from working, and to expel me at all hazards, and that if I resisted he would resort to extreme measures, and that if the forces he had at the isle were not sufficient he would soon have such forces, when the expected vessels got there; and he even boasted that he might carry all of us and our vessels to Venezuela for trial for having violated her laws and stolen her property, and the like. He then again assured me, on his honor as an officer and a gentleman, that he had interpreted the paper he wished me to sign truly; that it was a mere copy of his "permit," as he called it, that he had signed and given to me, and that it contained nothing conflicting with the views I had expressed to him, and not a word admitting the title of Venezuela in any way. Finally, after consulting with some of my company and the American captains of the vessels there, after several hours delay, by my refusal, I concluded to run the risk of relying on his word, and signed the copy, as did also Mr. C. H. Lang, as agent for Lang & Delano, and Dias kept it. Dias then said he would leave, and I was appealed to to provide his soldiers with some provisions and with water till he came back, or till the other Venezuelan vessels-of-war arrived, as they were short of both; and pretty much as a matter of charity and humanity I consented to do so, and he left. Some of the persons on the isle aided him with boats and sailors in going to and from his schooner, as he was badly off as to both. I did not anticipate any further trouble and continued my work. During all this time we kept the United States flag flying by day on the isle, on two liberty polls, and also on our vessels. Dias, whilst there, did not attempt to haul it down. I fed the soldiers, and they did not molest us, and I took the officer into my house and fed him also, and I employed some of the soldiers to collect guano and paid them in clothing and provisions. I feel bound to say that, notwithstanding Dias' menaces and threats, and his apparent demonstrations of an intention to fulfil them, I did not sign the paper from any apprehension of personal consequences to myself, if I persisted in refusing, or because I had any fear that with the force he had then at the isle he could have overcome my party or have driven us away. I had reason to apprehend, however, that he might attempt it, and I was desirous to avoid any extremities in which bloodshed might have ensued. Though I had no doubt that we could have taken him and all his men, and his

schooner-of-war, I did desire to avoid such necessity, and, from Dias' representations, I was not satisfied that my government might not have taken such action as to the guano isles in that sea as would have made such resistance improper, and also I did not know how soon the superior naval and military force, represented by Dias as coming there, might arrive; and, as we had no reason to expect a government vessel-of-war of the United States to protect us from their attack, we should have been at their mercy; and besides all these considerations, if Dias had not dishonestly misrepresented the purport of the paper, it was harmless. I have since seen the translation of the paper Dias signed and gave to me, which I learn Mr. Shelton sent to the State Department of the United States so soon as he received it from me, in February, 1855, and also a copy of the copy signed by myself and Lang, and kept by Dias, and a translation of it procured from the said department by Mr. Shelton; and by said translations it appears said papers are substantially alike, and I unequivocally declare that Dias' representations to me of their contents and purport were false, dishonest, and fraudulent; and if I had known or suspected the import of said copy so signed by me, I would not have signed it, even under his menaces and threats of military force to expel me from the isle, but I would have resisted him at all hazards, and if overcome, appealed to my government for redress. On the 23d of December, 1854, the same schooner (as I believe) came back; as she approached hoisted the Venezuelan colors, and the soldiers on the isle hoisted the same, and they exchanged salutes, in which one of the soldiers was mortally wounded, and who afterwards died. She landed twenty more soldiers, and sailed immediately for St. Thomas with the wounded soldier, but came back to the isle on the 25th, anchored about 5 o'clock p. m., and about 10 o'clock p. m. sent most of her crew ashore fully armed. They charged their muskets, and sentries were then placed around all our houses and stores, and over all our property, and at the guano pits, and on the wharves and over our cannon, and they forbade the hoisting of our colors any more. I was then in bed. When they first landed I did not anticipate any difficulty, as I supposed Dias' paper would prevent it. The next morning I did personally hoist the colors, in despite of the armed sentry at the flagstaff, and I directed my men to go on with their work. They did attempt it, but were charged upon by the sentries with loaded muskets and fixed bayonets, and desisted only when in peril of their lives; and so also with respect to some guano in barrows, which I directed laborers to wheel to the wharf; they did so till stopped by the sentries, who presented their bayonets and levelled their muskets towards them. Those on board of my vessels, laying off from the wharves a short distance, were expecting me to load as usual, until I signalled them to come ashore immediately, and they put off; but the boats were not allowed to land by the sentries. The United States flag that I had hoisted was hauled down, and it was not hoisted any more. The Venezuelan flag was hoisted in its stead by the soldiers, and continued flying till we left, and a salute with cannon was fired by the Venezuelans on the occasiod, from the isle and from the schooner. The officer in charge,

whose name I do not recollect, (but it was not Dias, who had not returned,) refused to pay any attention to Dias' paper, and imperiously and imperatively ordered, under menaces and threats, and demonstrations of a violent character of the employment of military force, that all the persons belonging to our parties and their vessels should leave the isle and its vicinity within twenty-four hours, and he refused to allow us a reasonable time to get our implements, water, provisions, and other moveable property on board of our vessels, and would not permit such vessels to approach to the wharves; and we were constrained, as he had a superior force, all armed, and acting in the name and under the authority of a government recognized by our own, to yield obedience to his commands, or engage in a combat which would have resulted in bloodshed. There was a British brig-of-war at the isle at the time, the name of which I do not certainly recollect; I believe it was the Mariner, or Marine. The commander left the isle, and said he intended to go to Laguayra, and find out by what right the Venezuelans so acted, and he said I might be certain my government would look into the matter and demand satisfaction.

TO THE TENTH.

In consequence of what I have stated, I was compelled to abandon on the isle a large amount of property, including provisions and water and other stores belonging to my employers, some of which the Venezuelans positively refused to allow me to take away, and then took possession of it themselves for their own use, as they had little else there for their troops, as they admitted, and none of which was I allowed time to bring away, and was, therefore, obliged to abandon, and all of which I have since been informed they appropriated to their own use. It is impossible for me to specify all this property, but I will state some of it. With the wharves and houses and sheds, there were a large number of shovels and spades, and hoes, and hatchets, and axes, picks and other implements, and wheelbarrows and wheeling plank, baskets, buckets and tubs, and tools, and water casks and tanks, and hogsheads and barrels, and a large amount of provisions and stores of various kinds, and water in casks or tanks, and two large launches or long boats and their appurtenances, the aggregate cost of all of which to my employers at said isle (and the aggregate value thereof to them was much greater if they had been unmolested in their business) was, according to the best of my judgment, (and I had a general knowledge of such costs and of their value, derived from my superintendence of said business,) more than ten thousand dollars. I verily believe that by a fair and just valuation it would have amounted to a larger sum, for they kept pretty much all that we had on the isle, and we were abundantly supplied. The residue of the property of my employers, of similar character, on board their vessels sent to said isle for use there, and which was rendered comparatively valueless by reason of said expulsion, was not less than two thousand dollars in value. I further state that, according to the best of my judgment, the cost at said isle of all the materials for the wharf of my employers, and which were left there, and taken

possession of by the Venezuelans, and the building of said wharf at said isle, was not less than $4,500. I further state that, according to the best of my judgment, the cost at said isle of all the materials for said seven houses and the sheds built by my employers there, and which we were compelled to abandon, and which the Venezuelans took possession of, and the building said houses and sheds at said isle was not less than $3,500, and the cost of the other property was as much as $3,500 more. I further state, that I do not include in said cost any of the expenses incurred on the cruise for the discovery of said isle, which, including the hire for the brig and crew so employed, were not less than $3,000, nor do I include any of the sacrifices, expenses, or losses incurred or sustained by the breaking up of their guano business at Arenas, in the Gulf of Mexico, in order to go to said isle, which I think must have amounted to several thousand dollars, and not less than $3,500; nor do I include in any of said estimates of any of said property at the isle any amounts except the actual cost of the materials or articles in the United States, and of their transportation to the isle, and the time, labor, trouble, and expense bestowed upon them there; and I consider my estimate greatly below what would have been their value to my employers at the isle if they had not been molested by the Venezuelan government, and if they had been allowed to continue the gathering of said guano.

TO THE ELEVENTH.

I have seen a copy of the statement of the claim presented by P. S. Shelton and Sampson & Tappan to the State Department, of their damages against the Venezuelan government. The first item is "for the guano on said island, estimated as a minimum at 25,000 tons, (probably 50,000 tons,) which, under the management of the subscribers, would have produced a net profit of $12 50 per ton, which on 25,000 tons is $312,500." I regard this item, if they are held to be entitled to the guano and to a fair compensation for it, as much below the amount they might justly claim. As I have stated in my estimate, the quantity stated is less than was on the isle when we were evicted. If Lang & Delano should be considered as entitled to one half, in consequence of the division in July, 1854, made under the circumstances I have stated, the quantity is still, I think, understated, for if nothing had to be paid for port charges or export duties, and if they had been free to load the guano at no expense but the cost of lading it as their own property, with the conveniences and facilities for so doing that they had prepared, then I regard the price or value claimed, viz: $12 50 per ton, as below what might reasonably be claimed for it at the isle, and a fair profit made upon it in the United States. As freights would probably not have exceeded, on an average, $7 per ton to the United States, even if sold at first sale in the United States at $25 per ton, it would have been a profitable trade, and have left also a margin for profit to those who purchased it to sell again. With respect to the second item of $20,000, I know of several vessels of my employers, or of vessels engaged by them, or

to whom they had engaged freights of guano from the isle, but as to this item of charge they can, doubtless, furnish more particular statements than I can give. I know they had made extensive arrangements as to the guano trade in reference to this isle, and incurred great expenses thereby, most of which were lost to them. The following named vessels, I remember, were at the isle when we were evicted, on the 26th day of December, 1854: the bark Amazon, the brig Viator, and the brig Mary Pearce. The ship James N. Cooper, was expected, and did, I believe, go out in ballast. All these vessels were sent out by my employers, and I understood they had others. The Amazon and Viator were driven off with but little cargo on board, and the Mary Pearce was sent away empty, and the James N. Cooper, I believe, was not allowed to take any guano.

In reference to the third item, of $8,500, I have already stated particulars, showing that, in my judgment, it is much less than it might justly have been made. In reference to the entire statement, I feel no hesitation in expressing my deliberate and sincere conviction that if my employers were entitled to hold possession of the isle, and to use the guano as their own property, and if entitled to payment for it from Venezuela, (without reference to the expenses of discovery which I have before alluded to, and without reference to the expenses and losses encountered by the abandonment of the Arenas business, and without reference to the embarrassment and losses consequent to Mr. Shelton from this interruption and interference with his business, by which he was compelled to suspend;) but simply and solely considering the actual and direct losses and damages from the deprivation of their property, the aggregate amount there stated is beneath what might be justly claimed. And even if they are not allowed any compensation whatever for the guano not gathered upon the isle, I verily believe their said actual losses in the premises, including the expenses of discovery, and also the said Arenas sacrifices, and also their direct and actual losses in consequence of their being compelled to abandon their arrangements for receiving, storing, and selling the guano in the United States and elsewhere, could not be reimbursed under forty thousand dollars at least.

TO THE TWELFTH.

I have no personal interest in this claim, direct or indirect, immediate nor remote, in anywise. I was employed as agent, at a salary and for a certain price per ton; I have settled with my employers; but I think in justice I should have more than I received, but I am not promised anything, nor do I expect anything from this claim. I have some feeling in it. I feel humiliated as an American citizen at the insult to my country's flag, and at the outrage upon myself and my countrymen at the isle, yet unatoned for; and I feel, too, sympathy for Mr. Shelton, whose rightful property, as I conceive, was despoiled from him whilst in my care, as his agent, by the fraud and trick and force of the officers of the Venezuelan government, and I have an anxious hope that his wrongs may be redressed by his government. This is the sum of the concern I have in anywise in the

claim; but if I know myself, it has not caused me to swerve from the truth in the foregoing answers, which, after reflection and care, I have caused to be written and printed, and to the correctness of which I now attest. I will name here the following persons who were with me at the isle, and whose names I can now recollect; there were others whose names I cannot remember. The testimony of all will, I am satisfied, sustain the truth of my answers: William P. Gibbs, my brother, who was my assistant; William James Gibbs, Frederick Scott, Kartin Austin, Adolph Ritchart, Charles Sullivan, Richard Thornell, John McCabe, Alfred H. Morgan, Joseph Herbert, John Sweeny, Robert Williamson, George Humphrey, T. H. Whitney, Frederick Kager, William Kalback, Britton J. Hopper, James Smith, Philip Knight, Henry Baker, Charles Knapp, John Carr, Henry Troutman, Gerard Ferrell, George Scotter, William Parker, Charles Johnson, Frederick Taylor, James Johnson, besides the crews of the vessels there. I believe these names are given correctly, but I am not certain.

NATHAN P. GIBBS.

—

Subscribed and sworn before me, and I certify that the foregoing interrogatories and answers were read to the above named deponent in my presence this 12th day of April, A. D. 1856.

JOSEPH C. LAWRENCE, *Notary Public*,
67 *Wall street, New York.*

———

UNITED STATES OF AMERICA.
STATE OF NEW YORK, } *sct:*
City and county of New York.

Be it remembered, that on the tenth day of April, anno Domini one thousand eight hundred and fifty-six, before me, Joseph C. Lawrence, a notary public of said State, residing in said city, and having my office at number 67 Wall street, by lawful authority duly appointed, commisssioned and sworn, and by law authorized to take depositions and affidavits, and administer oaths, and certify the same, did personally appear the aforesaid Nathan P. Gibbs, who hath made the said deposition, together with the counsel for said claimants, and that said counsel then propounded the aforesaid interrogatories to said Gibbs in writing, and read the same to him *seriatim* in my presence, and that said Gibbs made answer thereto in my presence, in same manner as each one was separately propounded, which answers had been in part written, but which were carefully revised and corrected by said Gibbs, or according to his directions, as each one was given in my presence, the said Gibbs having been first duly sworn by me on the Holy Evangelists of Almighty God, to make true and perfect answers to said interrogatories, and to certify the truth, the whole truth, and nothing but the truth in said answers, and having been duly cautioned by me according to law; and that said Gibbs signed

such answers, and I attested the same as sworn to on that day, and the said written answers being much interlined and obliterated, the same, after being so signed and sworn to, were, at his request, procured to be printed as above, and being so printed now on this twelfth day of April, in the year aforesaid, the same were read to him in my presence, and also read by him in the same manner as aforesaid, and he being again duly sworn and cautioned as aforesaid, according to law, to testify the truth, the whole truth, and nothing but the truth, he did depose and say, on his said oath, that the said printed answers, each and every one, were true and correct, according to the best of his knowledge, information and belief, and he did sign the said printed answers in my presence.

In testimony whereof, I have hereunto set my hand and affixed my [L. S.] official seal, at my office, No. 67 Wall street, in said city of New York, this twelfth day of April, 1856, and of the independence of the United States the eightieth year.

JOSEPH C. LAWRENCE,
Notary Public, No. 67 Wall street, New York.

No. 4.

WAREHAM, *April* 25, 1856.

SIR: I am informed that a townsman of ours, Captain Nathan P. Gibbs, has made a deposition in the Shelton isle case, and that probably the government of Venezuela may cause its officers to endeavor to contradict it, and that some evidence of his character and standing may be useful to sustain the truth. Implicit reliance may be placed on his word. He was born, brought up, and married, and, when at home, resides here, and his character is free from reproach, and he is intelligent. We feel it to be our duty to back him by our testimony, as we are quite sure you will not allow him to be assailed without that defence due to a citizen of your State and an honest and upright man. You may use this letter as you please, and file it at the State Department if you deem it advisable. Our community, who know Captain Gibbs, feel a good deal of interest that he should be properly sustained, as he deserves to be, and we consider the outrage upon him as a gross insult to every American citizen. We have made an affidavit and forwarded it to the State Department.

Very respectfully, your fellow-citizen,

STEPHEN C. BURGESS.

Hon. CHAS. SUMNER,
Senator in Congress.

UNITED STATES OF AMERICA,
STATE OF NEW YORK,
County and city of New York.

Before the subscriber, Joseph C. Lawrence, notary public of the said city and State, by lawful authority duly commissioned and sworn, and by law authorized to administer oaths and affirmations, and to certify the same. on this seventh day of May, 1856, personally appeared Richard Thornell, who, being by me duly sworn to testify the truth, the whole truth, and nothing but the truth, in a certain matter of claim against the government of the republic of Venezuela, in favor of Philo S. Shelton, and Sampson & Tappan, pending in the United States Department of State, deposes and saith, on his oath, That he is about 22 years old, is a native of Ireland, is by trade a cooper, and at present resides in the city of New York, and is not, as yet, fully naturalized a citizen of the United States; he says he is not interested in said claim in anywise, though he lost a winter's work by the transactions the claimants complain of; he says that he considers that there was 200,000 tons of guano on Aves island, now called Shelton's isle, in the Caribbean sea, when he first went there, in July, 1854, with Captain Gibbs; one half of it, he thinks, could

be called first class; and the best of it was worth, to any one who had vessels and the privilege of taking it free, and the privilege of the wharves and other conveniences in the establishment that Captain Gibbs had charge of there, and labor sufficient to get it, at least $15 a ton on the island; it cost but $7 or $8 to fetch it to the United States, and the lowest that the best of it ought to bring in the United States was $35 per ton; there was at least 75,000 tons, or more, of the best quality, on the island, in his opinion; he says he staid on the island till November 21, 1854, and knows all that occurred previously; what he got off was mostly inferior, as they had to clear away as they went, and take the nearest the wharf, in order to get at the best; he says that he thinks the wharf built by Captain Gibbs was worth there (and he means by worth its cost at the island when finished) at least six thousand dollars, adding, in freight and time lost to vessels, and the labor and expenses of all kinds there. We had twenty-eight men beside the sailors on board the John R. Dow, (and the crew were twelve or fifteen more,) and Lang or Captain Wheeler's company and ours helped each other fix the wharves; ours was prepared in Boston, and ironed, and was of good solid timber, and was built in fourteen feet water at its out end, and extended eighty feet from the land, and was about twelve feet wide, and laid on horses kept firm by being surrounded with heavy rock sunk round each one. Captain Gibbs had seven houses, besides several sheds, which were framed in Boston; and I think the houses cost, to put them up out there, $750 or $800 a piece; they were framed to stand the West India hurricanes; the sheds cost considerable to get them there—I suppose a thousand dollars would pay for them; we generally had at least thirty-five men in our party on the island, and our supplies came out from time to time on different vessels from the United States; and we caught some fish there, though the time lost was as much as they were worth; Captain Gibbs always had a plentiful supply of stores there—such as provisions, and sometimes exchanged with his vessels there; all his water had to be brought there in casks; he kept an ample supply; he had not less than ninety or one hundred large casks generally on hand, and the vessels took away casks nearly every trip, which were returned filled; Captain Gibbs also had plenty of implements—tools of all kinds, barrows, and everything necessary for such an establishment—all of which must, at the island, have stood the owners in at least ten thousand dollars; I do not think his outfit on the island could have cost less there; I do not mean to include in this the wharf, or houses, or sheds, or the extra cables and anchors for moving the vessels which were kept there, or his extra launches or boats, of which there were two launches that must have cost several hundred dollars, used for lading the guano, but I mean only his stores, provisions, medicine, implements, barrows, tools, and the like; he further says he believes the stock was kept up, and was particularly so towards the last of the time, as it was intended to push the business that winter, and he thinks there was more than ten thousand dollars worth there; he says he never saw a list of them, but has a general recollection of them, and a general knowledge of the cost of such things in the United States, and there was

generally supplies for a couple of months ahead for thirty-five or forty men, besides the implements, &c.; and besides that, there was the common and sundry small arms, and powder and ball. Any ship-master or merchant can judge of the freight out. These things were indispensable to the business. I have no doubt if they had not been disturbed that those who were in possession of the guano would have made an immense fortune out of the island. I reckoned Shelton and Sampson & Tappan would make a million of dollars at least; and have no doubt they would, if the Venezuelans had not interfered with us. Several of their vessels were disappointed in cargoes, as I heard, by being drove off. I heard that a ship called the J. N. Cooper was driven away in January, 1855. We saw no United States men-of-war out in those parts while we were there, but several of other nations; I think they ought to have been down there. I think Captain Gibbs kept on hand six or seven thousand dollars worth, at least, of provisions, stores, implements, water casks, barrows, and other property, besides the wharf, and houses, and sheds in his charge, and the boats that cost several hundred dollars, while I was there. I think the hiring of the vessels in the trade cost $250 or $310 at least; when I say six or seven thousand dollars above, I mean the cost in the United States; I have before said, out there, they were worth ten thousand. If they had not been driven off, I should have gone back there. I know Captain Gibbs was there in the "M. H. Pomery."

RICHARD THORNELL.

STATE OF NEW YORK,
City and county of New York. } *ss:*

Be it remembered that on the day and year first aforesaid, said Richard Thornell appeared before me in person, and was duly sworn as aforesaid by me, and made answers to questions propounded to him on behalf of said claimants, as above stated, and the same were reduced to writing in my presence, and carefully copied, and read and explained to him, and he deposed that the same so subscribed by him were true, according to the best of his knowledge and belief.

In testimonium veritatis I hereunto set my official seal, at my [L. S.] office, No. 67 Wall street, the day and year first aforesaid.

JOSEPH C. LAWRENCE,
Notary Public.

No. 9.

[*Copy of deposition of John McCabe, original duly certified on file at State Department.*]

UNITED STATES OF AMERICA.

PHILO S. SHELTON and SAMPSON & TAPPAN, *against* THE REPUBLIC OF VENEZUELA.	Claim for indemnity, &c., for dispossession of Shelton's isle, and taking property, &c., in 1854, and keeping it from their possession.

John McCabe, a witness for claimants, being duly sworn to testify the truth, the whole truth, and nothing but the truth, touching said claim now pending in the State Department of the United States, and being duly cautioned according to law, doth depose: that he is of lawful age, and is a citizen of the United States, and resides in the city of New York; that he is not pecuniarily interested in said claim; that he went to the isle with Captain Gibbs, in the John R. Dow, and arrived there in July, 1854, the same day that Captain Wheeler did, in the brigantine M. H. Comery, and that they both landed next day (sea time); that he staid there till Christmas, 1854, when the Venezuelans took possession by military force; that he thinks there were 200,000 tons of guano on the island, and that was the general estimate, and one-half was first-class if carefully procured. That he won't pretend to give a positive valuation, but he thinks that there were at least 75,000 tons on Captain Gibbs' part of the island, worth $13 or $14 a ton, considering that he had all the means of gathering it and loading it prepared for his use, and hands there also; that he means the value at the isle to the owners, they having these means, (wharves, houses, boats, and the like,) and he thinks the freight ought not to be more than $8 per ton to the United States in the winter time; and if any one bought it at the island for the price he states, at the generally going prices in the United States, they would make good freights, and covering all expenses he supposes would make heavy profits, provided they know how to get it up for market, and how to sell it. The chief part we sent off was the most inferior sort on the island, which Captain Gibbs got out first to reach the best. Captain Gibbs took out twenty-eight men in the Dow, besides the sailors, twelve or fifteen more, and he built a wharf 80 feet out, and in 14 feet water; it was framed, ready to be planted, in Boston, and taking it there, and the labor and time spent there on it, deponent says would make it cost at the island at least $5,500, if not more. Captain Gibbs also carried out and put up seven houses, and deponent thinks that they cost at the isle somewhere about $750 apiece; they were built strong, in order to meet the heavy winds and sometimes hurricanes in that latitude. Besides the houses, there were several sheds, which he supposes cost all together $900 or $1,000. Captain Gibbs took plenty of supplies of all kinds proper for the party, and all sorts of tools and

implements, and fire-arms, and two cannon and ammunition, and a supply of boarding-pikes and cutlasses. Deponent says he don't know exactly what to say these things all cost at the island, but there was a full outfit suitable for such an expedition, and keeping up the same, and he thinks taking them, and all expenses attending them, cost for all the time they were there—for supplies and other things kept coming out all the time—must have cost them well nigh to eighteen or twenty thousand dollars in all, leaving out the wharf, houses, sheds, and several extra boats they had, and extra cables and anchors. He thinks they generally had two months' or more supplies of provisions on hand. They had over a hundred water casks. He can't specify all things. He was there when Dias first came, about the 12th or 13th of December, 1854. He had to help boat him and his soldiers ashore, and they were the most miserable, shabby-looking set of vagabonds pretending to be regulars he ever saw. They were badly off in every way, and we had to feed and clothe the poor wretches for humanity's sake. After they eat and drank awhile, some of them would swell and talk large, especially the officers, till they got hungry again. The talk at the island we got from them was, that their government owned all the guano islands in these parts, and that they were part of a squadron going round to take possession and drive away everybody else, and that in a few days a big steamer and other vessels with troops were coming to the island. The Venezuelans said that the "*Gobierno Yankos,*" had given it up to the republic, and that both had formed a company that had several millions capital, and that several of the principal officers and head men of our country and of theirs were joined in it and would make their fortunes by it, and that they expected a good slice themselves. They said our minister or consul in Venezuela knew all about it, and knew that the ships and soldiers were out visiting the guano islands to drive everybody off but the company. They said we should have to go, as the United States had agreed to it. This was their current talk. We all knew that Dias had given Captain Gibbs and Charles Lang, on the 12th or 13th of December, a paper in Spanish, which we generally understood was a protection against the squadron that he said was coming down, and an order not to disturb us. We heard that afternoon that he wanted Captain Gibbs to sign a paper in Spanish, saying he would allow his soldiers to stay there and keep everybody but our parties off, and feed them, while he was gone down to Laguayra, and see what his government wanted to be done, and what the United States had agreed to about the island. Captain Gibbs refused for several hours; said he did not read Spanish, and he would not sign anything; and that unless the United States had agreed to give up the island, the Venezuelans had no right, and he would not acknowledge any, and he had no right to sign any paper, and it might commit him. Dias said over and over again that it did not acknowledge his claim, and that he did not want any such thing; and after talking smooth awhile, then he would blow and talk big, and then coax again; and he went round among all hands and seemed a good deal troubled, as if he had his hands full. Finally, towards night, Captain Gibbs, through his representations, signed his paper, and Lang

also, and he then cleared out, leaving several of his soldiers there and one man who was an officer. We had to give these fellows victuals, and clothes, and drink, and tobacco, and cigars, and shelter to sleep on, for about two weeks, but they were all too lazy to work. I never saw such a gang of worthless human beings in the whole course of my life. When the second party came to the island, the fellows ashore undertook to salute them, and one of them got wounded in firing the cannon by his ignorance and awkwardness, and they took him away to St. Thomas for a doctor, and he died. They came back and landed more men late at night, on Christmas or the day after, and stationed their soldiers, with loaded muskets and fixed bayonets, all around, and pretty soon announced that they took possession, and that we should not take any more guano, and must go off the next day. They said we should not hoist our flag any more. Their sentinels were kept stationed around our stores, and at the pits, and on the wharves, and at the flag-staff, all night, and kept there till morning, and till we went away. They helped themselves to all they wanted. In the morning Captain Gibbs did hoist our flag, in spite of the sentinel at the liberty-pole, and hailed the vessels to send their crews ashore. Our party wanted to lick the vagabonds off the island and take the schooner. We could have tied the whole concern in fifteen minutes, and captured their vessels besides; but some of Lang's party were not disposed to go in for the fight, and Captain Gibbs said he did not know what the United States government might have done about the island; and it seemed that our minister must have known the vessels were coming down, and that it would be best, on the whole, not to have any bloodshed, but to make it necessary for the Venezuelans to show force and demonstrations, and then come home and report the facts to the President, and see if he would let our country be run over and cowed down, and such a set rob American property with impunity. We never saw any United States ship-of-war down there, but several of other nations. I think there ought to be some men-of-war cruising about to protect our citizens, and that somebody is to blame that it is not done. Our country is not considered to be of much account in the way of protecting our commerce, as well as I could learn.

The French and English, Dutch and Danish men-of-war people, when they came there, inquired where our men-of-war all were? I felt mighty mean when I saw the stars and stripes hauled down, and the Venezuelan rag hoisted in its place. Captain Gibbs came away in a few hours. He was not allowed, unless he chose to make fight, to take off but very little of the provisions and other things. He left two launches or boats, most all of the implements, and tools, and barrows, and nearly all the provisions, I should say; he left seven or eight thousand dollars worth, at least, of property, besides the wharves and houses and sheds. What he did bring away was not of much use or value, except the cannon and small-arms, for the Venezuelans kept most of the provisions for themselves to eat. They kept the chief of our water casks. I came off on the Amazon, and went to Holmes' Hole, and got there 28th of January, 1855; and my passage was settled by claimants. The Amazon had about 490 tons of guano on board.

The Viator had but part of a cargo, and the Mary Pearce was not allowed to take any. Captain Gibbs got everything he could get away, or was allowed to. He says he feels bound and desirous, as a citizen of the United States, to express his sentiments about these transactions. The island, if well managed, could have been made to yield more than two millions of dollars, and the Venezuelans, in my opinion, had no more right to take it from us than they had to take a ship on the high seas. He says he don't know how this insult may be plastered up; but he considers it a most rascally affair, and if the government don't make the mulatto vagabonds pay for this piratical act, and all damages, and give up the island, they might as well quit trying to be a government. He says he looks at it as worse than the Black Warrior case, or the Greytown case, or any other case that he has heard of, except the late massacres at Panama and Virgin bay; and that he should not wonder if those who perpetrated them, (for they are the same breed of people,) were encouraged to the act by having heard that the United States had not done anything in this case, and that it was safe to impose on a Yankee. He says he has insisted on putting in this expression of his opinions, so that they be wrote down in the records.

JOHN McCABE.

No. 10.

DERBY, (CONN.,) *June* 17, 1856.

DEAR SIR: Enclosed is a copy of a deposition of Captain James Wheeler, in the Shelton's isle case. Please file it with the memorial of Mr. Shelton, before your committee. There are three *originals* of this deposition: one is on file in the State Department, another is in my possession, and a third the deponent, Wheeler, has; but, lest it may not be forwarded to the Senate or House by him, as was expected, this copy is forwarded. I do not regard it of much importance, but deem it best that it should be filed. Wheeler has made two others last year, also on file in the State Department.

Very respectfully, your obedient servant,

H. S. SANFORD.

Hon. J. M. MASON,
Chairman of Committee on Foreign Relations, U. S. Senate.

P. S.—If the depositions could be printed, annexed to the report of the committee in this case, it would give them an official character over any printed by the claimants; and they would be on record, and it would save us that trouble, and also the State Department the trouble of copies. I should think the government could do this much for the claimants.

Copy of deposition of Captain James Wheeler, June 8, 1855. *Discovery of guano on Shelton's isle. Original on file at State Department.*

I, James Wheeler, hereby certify, that I was, in the early part of the year 1854, in the employ of Messrs. Sampson & Tappan and Philo S. Shelton, of this city, collecting guano on an island in the Gulf of Mexico; that some time in the month of March, in said year, Capt. Nathan P. Gibbs arrived at the island in the brig "John R. Dow," and informed me that, by direction of our employers, he had visited "Islas Aves," or Bird island, in the Caribbean sea, latitude 15° 40′ north, longitude 63° 35′ west, and had found quite a large deposit of guano upon the principal island.

I returned to Boston in the month of May of same year. I left the employ of the gentlemen above named, and persuaded Messrs. Lang & Delano to fit me in the brig "M. H. Comery" for said island for a cargo of guano. I left Boston harbor in said vessel on or about the 22d of June, understanding I was to be immediately followed by Captain N. P. Gibbs, in the brig "John R. Dow," sent out by my former employers.

I arrived at the island on or about the 15th day of July, a vessel which I supposed to be the "Dow" being then in sight, and she also arrived the same evening at the island.

I give this declaration as an act of justice to Messrs. Sampson & Tappan and Mr. Shelton, to whom I was indebted, through Captain Gibbs, for the knowledge that there was guano on said island, of which fact I was previously ignorant, and imparted the information to Messrs. Lang & Delano, to the prejudice of my former employers; and as an act of justice to them I give this declaration.

Given under my hand, this 8th day of June, 1855.

JAMES WHEELER.

—

STATE OF MASSACHUSETTS, *County of Suffolk, ss:*

Then personally appeared the above named James Wheeler, and declared, under oath, the above to be his free act and deed. Before me—

JOHN CLARK,
Justice of the Peace.

BOSTON, *June* 8, 1855.

—

[Original on file at State Department.]

Deposition of Captain J. Wheeler, June 15, 1855, *as to United States flag being hoisted and kept flying on Shelton's isle, and as to declaration of British commander of her Britannic Majesty's steamer Devastation as to our rights, &c. Filed by P. J. S.*

I, James Wheeler, late master of the brig "M. H. Comery," do depose and say: That much of the time when I was on Aves or Bird

island, and afterwards, when I was lying there with my vessel, the American flag of the United States was flying, and that it was a usual practice to keep said flag flying. I further depose, that when visited by the British steamer "Devastation," I informed the commander that we held the said Aves or Bird island for the government of the United States, and expected to be protected by our government, as we were citizens of the United States

The American flag, which was then flying, was respected, and I was informed by Captain D'Orsey, of said British government steamer Devastation, that we had the right to hold the island in the name of the United States.

JAMES WHEELER.

—

COMMONWEALTH OF MASSACHUSETTS, *Suffolk, ss:*

Then personally appeared the above named James Wheeler, and made oath that the declaration by him subscribed was true. Before me—

GEORGE B. UPTON,
Justice of the Peace.

JUNE 15, 1855.

NO. 11.

UNITED STATES OF AMERICA.

STATE OF NEW YORK,
City and County of New York, } *ss:*

I, James Wheeler, do solemnly and sincerely swear and depose, that the following statement is, in every part and particular, true, and that I do not recollect anything material in relation to the claim of Philo S. Shelton and Sampson & Tappan against the Venezuela government, that I have not stated therein.

I was born at Long Island, New York; I am a citizen of the United States; I reside at Boston; I am a ship-master, and was brought up a mariner; I have command of the bark Merlin, of Boston, and have just returned from Sagua La Grande with a cargo of sugars; I am about 32 years old. In the beginning of the year 1854 I was employed by Sampson & Tappan and by P. S. Shelton, merchants of Boston, in gathering and shipping guano from Arenas, in the Gulf of Mexico; we abandoned it in April, 1854; we had ascertained to a certainty that there was a large quantity of guano of excellent quality on "Aves island," in the Caribbean sea, since named "Shelton's isle," by P. S. Shelton. The Mexicans were trying to make a fuss about our taking guano from Arenas, and set up a claim to it; I don't think they had any title, as it was a barren, desolate rock, and nobody ever lived on it till guano was gathered from it by us, at least, as I believe, unless pirates harbored there; it is on what is called the

Campeachy Bank, at least 80 or 85 miles from the nearest main land, which is the coast of Yucatan. Our government did not afford us any protection, and we had to take care of ourselves; I stayed there nine months, and I never saw a vessel of our navy in those parts, but repeatedly cruisers of other nations were around, protecting their commerce. Navigators of the United States have got used to this, as they rarely come across any of our naval vessels except in a comfortable port, at home or abroad. If any English or French navigator had found the guano on the Arenas, and taken possession of it, I have no doubt Mexico would have been snubbed at once by a ship-of-war, for trying to scare them off; but it don't seem as if our government thought our navy is kept for such purpose, or else the navy is of little account. I was chief agent at Arenas, and I had made up my mind to resist the Mexicans on my own hook if they came to disturb us; but my employers concluded, before the thing was tested, to abandon that place and make an establishment at "Shelton's isle." On the 8th of June last, and also on the 15th of June last, I made an affidavit, both of which, I understand, are filed in the State Department at Washington. They were drawn by Mr. Sampson, I believe, and though they state the truth, they are imperfect, because they do not set forth all the facts fully, and one of them is loosely drawn, and I wish to explain, for fear it may be misunderstood. I answered the questions put to me, and which I was informed were on the important points, and I did not go into particulars on other points, and was not asked to; I did not mean to say, in the first affidavit, that, until captain Gibbs informed me, I was totally ignorant of Aves island, or of there being any guano whatever on it; what I meant was, that I did not certainly know, and was not positively certain of there being good guano, and in large quantities fit for market, and of great value there, until after he had inspected it, and reported to me the particulars. The facts are these: about the year 1849, before Captain Gibbs visited the island, I was mate of the "Maria Foss," a down-east schooner, I think, commanded by Captain Marcus Mullen; and when running down from Dominica to Laguna, passing in the vicinity of the island, which is not seen till you get close to it, we discovered what we supposed to be the mast of a wreck, and made for her, and found her to be a smack, having on board a small party of West India egg-gatherers, either Dutch, or Danish, or French, which, I cannot certainly say; I think they were from St. Thomas; our vessel did not anchor, but neared the island and hove to, and I took a boat and several men and went on it to find out what was going on, and I ascertained it was a barren rock; gathered some birds' eggs and caught some fish, and after staying perhaps an hour, came off, and we pursued our voyage; there was no water nor wood on the island; nobody lived there, and the party there were mere stragglers; I noticed the isle, but guano from this side of the continent was not then generally known to be of any account, and I paid little attention to it, and did not examine with respect to its quantity or quality; and not then having any experience with regard to the article, I did not know whether it was good, bad, or indifferent.

Afterwards, when I first went in the guano business for Sampson & Tappan and Philo S. Shelton, I called to mind my visit to this

island, and my belief that it probably, from my recollection, contained good guano and considerable of it, and I advised them to send a vessel there to examine it, and told them the latitude and longitude, as well as I could remember. I don't recollect whether I told all of them or not, but I told one of them I am positive, and I wrote a letter to Captain Cook, one of their captains, to the same effect, and left it for Sampson & Tappan to give him his directions. I believe that it was what I told them that induced them to send Captain Gibbs on his discovery or examination cruise in March, 1854. I considered myself the first discoverer of the guano on that island, and I claim whatever benefit I have a right to claim on account of it, though I am willing everybody else may get their just due. After Captain Gibbs went to the island and examined it, he came in the brig John R. Dow to Arenas, where I was, and told me that he had examined the island, but said it was not exactly the latitude and longitude I expected and had stated from memory, but that there was a vast quantity of first-rate guano, and easy to be got at, and so we broke up the business at Arenas right away, according to our employer's instructions, and took all our people (I think fifty-odd) to New Orleans and discharged them, and took our guano traps and fixings there also and sold them, though they brought very little, preparatory to our coming east and fitting out an establishment for the island. I came east first in a steamer, and got to Boston in May, but my employers treated me illiberally, as I thought, in not placing me in charge at the island, or of a respectable vessel on a good lay; and as they acted according to their own fancy, and looked to their own interest without considering mine, I did the same, and so told Lang & Delano what I knew, and they fitted out the brigantine Mahala H. Comery, for me to go to the island for guano on shares between us, I to have half the profits, and to have full charge. I left Boston about the 22d of June. I knew Captain Gibbs, in the John R. Dow, was going out for my former employers. I reached the island on the 15th of July; the John R. Dow was then in sight, and arrived the same evening. We both landed the same day. We each had materials on board of our respective vessels for a wharf and houses, and sheds, and had provisions, stores, implements and the like, and I had eight men besides my crew, and Captain Gibbs had twenty-eight men, I believe, besides his crew. Other vessels, and hands and laborers, and other articles were expected to follow us by our respective parties to gather guano, and we, in the meantime, were to prepare for loading and shipping the guano, build a wharf and fixtures, each for himself. There was some dispute between Captain Gibbs and myself about our rights, but finally it was concluded to divide and stake off to each one his lot, being about half of the island, he having the southwest end, and I kept the northeast end, and leave all disputes as to right to be settled at home, if any trouble arose thereafter about the rights. We were several days (say a fortnight or more) building our wharves, which we put alongside of each other for greater security to both, but each party kept on his own side. The outer end of them was in about fourteen feet of water, and they extended eighty feet from the shore, and were about twelve feet wide each. We put up the houses, and landed and

stored the provisions and implements, and went to work. I staid there seventeen days, and then came to Baltimore in the brigantine, with a cargo of guano, consigned to Charles Stewart, and returned again to the island for another cargo. Lang & Delao had sent out the ship Kentucky, and I had partly loaded her, when those on board had to slip her cables, and run her to sea; my wife was on board of her. The ship put into St. Thomas in distress, and I went there in the M. H. Comery and took her cargo out, and carried it to Boston. I did not go to the island again, but went to the Mediterranean. It was in October when I left.

I was not at the island when the eviction took place. I was not there on the 12th or 13th December, 1854, nor at Christmas when the Venezuelans ran Gibbs and Lang off. If I had been, I would have reisted, or have made a show of it; for I think the claim of that government is a ridiculous humbug, for the rock is not near to the Venezuelan coast, nor within, if I have understood correctly, her old Spanish boundaries and jurisdiction when she belonged to the Spaniards, nor within those by which Spain acknowledged her independence, and Venezuela never had possession of it; it never was supposed to belong to her, and it was a barren rock, with no trees or herbage on it, and completely derelict, and it is probable no one would even have claimed it, if guano had not come into play and been found on it. I think she had no more right to drive our people off than she had to drive us off a wrecked derelict vessel found at sea by us, and nobody knowing the nation she was of. Captain Gibbs had two cannon, plenty of small-arms and ammunition, and boarding-pikes and cutlasses, and, including the crews of the vessels there, say sixty or seventy men or more, they could have tied all the Venezuelans and sunk their armed schooner in half an hour; and my opinion is they ought to have showed some pluck, then our government would have been forced to back us, and there would have been no delay from any cause. I don't know anything about the Spanish paper Dias fooled Gibbs and Charles H. Lang to sign, except what I have heard. I knew that neither Gibbs nor Lang knew anything of Spanish. I was surprised at Gibbs' signing any paper whatever, but not at Charles H. Lang doing it, for he was not himself half the time, and hardly responsible for what he did about then. I knew pretty well what such a wharf as Captain Gibbs built would cost at the island, reckoning in the freight and time of getting it out of the vessel, and sinking the piers, for which, after placing the horses, he got rock and piled round them to secure them. I would not undertake to build such a wharf there for less than $6,000, and should probably lose on it if I did. His materials were better, more extensive, and valuable than mine were. Every one may make his own calculations; this is my estimate, and I am not influenced by anybody else's, whether more or less. If the houses and sheds have been (as I have heard) carried off by the Venezuelans, I do not think those put up by Captain Gibbs could be replaced under forty-five hundred or five thousand dollars. They were better than mine; there were seven of them, and also sheds, built strong to be secure against wind, and framed in Boston and well put together. I do not know how much provisions were taken, (by the Venezuelans) or other articles. Captain Gibbs kept a good

supply of everything whilst I was there, except spirituous liquors, which he all stove in one day, as some of the men got drunk and mutinous. Including implements, tools, barrows, water-casks, artillery, and other arms and implements, and other things ashore, and the usual and ordinary quantity of provisions and stores supplied from time to time, and generally on hand, I think the property on the island in his charge, belonging to his party, besides the wharf, houses, sheds, boats, anchors and cables, was at all times worth nine or ten thousand dollars. Mine was not so much in quantity, nor worth so much as his. How much he got away I don't know, nor how much the Venezuelans kept or destroyed; but I have some experience in this business, and I consider that what he did get off it would be very good management and good luck if it could be made to realize twenty-five per cent. of its cost. Most of the things would be of little or no use except in such business and at such a place as the island. I don't know about the false freights of Sampson & Tappan and Philo S. Shelton, except what I have understood, and that is not evidence. I cannot specify all their vessels that were disappointed. I consider freights from the island to the United States cheap at seven dollars per ton for guano, and that it was low freight in 1854. I think there were 50,000 tons and more of first-class guano on Gibbs' part of the island staked off by me, and as much more on my part; and this was not half on either lot, but I estimate that the rest was not all good merchantable guano—say 50,000 tons and more on each lot. I consider the 50,000 tons which I call first-class guano, on each of the two lots, as worth at the isle, with the privilege of the preparations for getting it and loading it there, use of wharves, &c., there, fully fifteen dollars per ton, and much more there, and the residue was not worth so much, but it would bear good freight. There is great skill and experience in gathering and shipping guano and sending it to market. The practical experience I refer to is, in my opinion, worth a great deal more than the quackery of men, who call themselves chemists, about this article. I have always, since June, 1854, regarded the island and guano as worth about two millions of dollars, if properly managed. I should reckon that the Dow's cruise to find and to examine the island, in the spring and summer of 1854, as she was well manned, cost, say, in round numbers, *three thousand dollars*. I know pretty well, and I judge that the sacrifices by the abandonment of Arenas would not be covered under $3,600. I use round numbers, because I estimate generally without exact particulars as to items of loss. I am not competent to judge of the damage sustained in other ways than above referred to. I know they helped to break Philo S. Shelton, with some other losses, and made Lang & Delano suspend for a while, and I am satisfied they must have been very great. Merchants or others can tell more about this than I can. I consider the lining of each vessel for the trade worth $250 or $300. Lining the Comery cost me $317. I consider the bill of Sampson & Tappan and Philo S. Shelton, for damages, $28,500, exclusive of the guano, as not *one-third* of what they might justly and honestly claim, leaving the value of the guano out of sight altogether; and if the island was restored to-morrow, with all that is on it, decayed as the wharves and houses necessarily

must be in that climate, I have no idea that $50,000 would reimburse them and make them whole, even if the Venezuelans paid for the guano took away besides. I regard this transaction as one of the most shameful and disgraceful occurrences that has ever been submitted to by the United States; and, as an American, I feel mortified and ashamed that nothing has been done. Our country is sneered at in West Indian ports and in Cuba, by foreigners, for their being so tame, and for submitting to it; and when I heard it I could not with truth answer these jeers. I am not interested in Sampson & Tappan's claim. I do feel that I am one-half interested in Lang & Delano's, under our agreement, if they got allowed anything for the guano on the island, for I first found it, and I hope my rights will be protected. I have avoided saying anything about their claim, because I feel interested. I feel sympathy for Mr. Shelton, but not much for Sampson & Tappan, for they treated me badly. I do not think that Lang & Delano, nor any of them, are treating me fairly, if, as I am informed, no claim has as yet been put in for me. I claim as a discoverer, and I claim also for my wages, and about six months' employment in a most disagreeable business, in a tropical climate, on a desert isle, wholly lost, and my share of the profits we should have made off our one-half of the island staked out, if we had not been disturbed; and I leave my government to judge of the amount. I don't want anything that is not fair and reasonable and just. Neither Sampson & Tappan nor Lang & Delano have settled with me yet. I am informed that little or no profit was made on the guano brought from the island whilst we had it, because we gathered mostly the outside and indifferent guano, nearest the wharves, before we could get at the best, and because, also, the difficulties caused by the eviction forced them to sacrifice it. I have heard, however, it brought between $25 and $30. (The account sales will show.) But the expenses were great, as we were just starting the establishment, and the profits afterwards would, if we had been allowed to go on, have been pretty much clear gain.

In July, 1854, Captain De Horsey, of the British man-of-war steamer "Devastation," came to the island. The captain had heard at St. Thomas of a vessel having been boarded and robbed by a pirate in the Mona passage, and had heard of vessels lying at the island, and suspected us; he came down and lay off all night, and pounced upon us just before daylight in the morning. I went out and boarded him, and told him who we were, and piloted him to the anchorage, and he came ashore; but I took care to land first and have the *American flag* hoisted on a staff. We kept the flags flying always by day, but not always by night. He staid some time, and gave his men liberty, and they bathed on shore, and he took samples of the guano and we talked about its quality. He asked me if I had taken possession of the island for the United States, and I told him I had. His reply was, that I was perfectly right. He estimated the quantity at 200,000 tons. I told him it was worth $35 in the United States. I was not the owner of the vessels there, but I called them "my vessels," and "my men," and "my party," as is usual with those having charge; and I thought it best not to let him know that there were two parties on the island, as he might consider the guano a kind of

general or common property that anybody could come and take, and I therefore allowed him to think it was all one and the same party.

Captain De Horsey was a very gentlemanly man and a good officer; he volunteered to go in his ship with me to hunt for the "Kentucky," when she slipped her cable, and went out to sea in a hurricane, in distress, and behaved very handsomely, for which I returned him my thanks; he declined a neat present Mrs. Wheeler sent to him and his officers for this act of humanity. The captain of a French steam-frigate came to me at St. Thomas and got samples of the guano, and inquired of me the facts, and I told him, and he said we were right. I never saw an American man-of-war all the time I was in the Gulf or in the Caribbean sea in the guano business. I make this deposition at the instance of Philo S. Shelton's agents. The Dutch had a dispute with *Venezuela* about the other Bird islands, nearer the main land, (for Venezuela made a general claim to all there were in that sea,) and these others were claimed also; and I see by the newspapers that they compelled her, by sending some ships of war down to La Guayra, to make satisfaction, and that *our minister* there helped to settle it.

I think our affairs might as well have been settled at the same time, as sixteen months has gone by. A copy of Commander De Horsey's report, that Mr. Shelton has sent to me, is annexed.

JAMES WHEELER.

Sworn and subscribed before me, May 7, 1856, as aforesaid.

UNITED STATES OF AMERICA.

STATE OF NEW YORK,
City and county of New York, } *ss:*

I, Joseph C. Lawrence, a notary public of said State and city, residing at No. 67 Wall street, in said city, certify that said James Wheeler appeared before me, on the 6th day of May, A. D. 1856, and made oath to a deposition, which he informed me he heard previously read, and with the contents whereof he was well acquainted; and the same was again read to him in my presence, and the manuscript carefully corrected by obliterations and interlineations according to his direction, and so corrected he deposed that the same was true, and signed the same; and on this 7th day of May he again appeared before me and compared the aforesaid deposition with the corrected one, and found the same a true copy thereof as corrected, the same being again read to him, whereupon he did again depose and swear that the same was true as aforesaid.

[SEAL.] Given under my hand and seal of office, the day and year last aforesaid, at No. 67 Wall street, New York.

In testimonium veritatis JOSEPH C. LAWRENCE.

No. 12.

FOREIGN OFFICE, *April* 11, 1856.

SIR: I referred to the admiralty your letter of the 4th instant, enclosing a copy of one from Mr. Sanford, requesting your assistance to procure for him certain specified information as to the visit of her Majesty's steamer "Devastation" to the Aves or Bird islands, and I have now the honor to transmit to you, herewith, an extract of a letter, dated the 1st of August, 1854, from Commander De Horsey, of her Majesty's steamer "Devastation," to Commodore Henderson, reporting his visit to the above-mentioned islands.

I have the honor to be, with the highest consideration, sir, your most obedient humble servant, in the absence of the Earl of Clarendon,

E. HAMMOND.

G. M. DALLAS, Esq., *&c.*, *&c.*, *&c.*

Extract of a letter from Commander De Horsey to Commodore Henderson, dated August 1, 1854.

"Having obtained information at St. Thomas that two or three vessels had been sent at the small uninhabited islands of Aves, in latitude 15° 40′ and longitude 63° 36′, and the trades hanging well to the northward, enabling me to fetch down, I proceeded there, and, on arriving, found three American vessels—a brig, a brigantine, and a schooner—employed in shipping guano. They had been there about ten days, and were expecting a fourth vessel, a bark, all owned by the captain of the brigantine. The owner of the vessels informed me that the guano was but slightly inferior to the Peruvian, and better adapted for tobacco lands, and that it would be worth $35 per ton in the United States. At a rough estimate, I should say there were about 200,000 tons of guano on the island, which, at £7 per ton, would make the island worth one and a half million sterling.

No. 13.

Copy of bill submitted by Mr. Sanford with memorial.

A BILL to be entitled: An act declaratory of the rights of the United States, and of the citizens thereof who have discovered, or may discover and occupy derelict guano and other islands, keys, or rocks, in and to the same, and for maintaining such rights:

Whereas, the rights of the first discoverers of any island, key, or rock not appertaining to any State by contiguity, unless followed and perfected by continued possession and actual occupation thereof becomes extinguished, and therefrom, or upon the abandonment of such pos-

session, subsequent discoverers may take possession of and occupy such derelict island: and whereas, also, such subsequent discovery, possession and occupation, whether by a commissioned officer of the United States, or by a citizen thereof not in the public service, doth cause to inure to and vest in the federal government of the United States the plenary right of sovereignty or eminent domain over and to the same, unless expressly declined by the Executive or the Congress of the United States: and whereas, also, said discovery and possession and occupation by such citizen vest in such citizen the right to possess such island, key or rock, and exercise the ownership thereof, and of all that may be found thereon, exclusively, against all States and persons whatsoever, except the government of the United States aforesaid, which hath full power to restrain or regulate such exercise and to limit such exercise by law: and whereas to allow commissioned officers or others in the public service of the United States to acquire such individual rights by such discovery, whilst engaged in the fulfilment of their public duties, might be prejudicial to the public interests: and whereas, also, in such cases of discovery by private citizens, they should be protected in their said rights by the federal government: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in all cases of discovery as aforesaid of any guano or other island, key, or rock, *as aforesaid*, and the possession and occupation thereof by a citizen of the United States, it is hereby declared that the right of sovereignty and eminent domain of, to, and over the same, vests in the United States, unless the same is expressly declined by the Executive of the United States or by Congress, and the exclusive right to possession and ownership founded on such discovery and possession of the same be made by a commissioned officer or other person in the public service of the United States in the fulfilment of official duties, shall vest exclusively in the United States, and be regulated as the Executive of the United States may direct, until otherwise provided by law; and if such discovery and possession shall have been made by a citizen of the United States not in the public service as aforesaid, such citizen shall have and possess such exclusive right of possession, ownership, and use to such island, key, or rock, and everything found thereon, until otherwise provided by law. And to the end that said rights of the United States and of such citizens who shall have discovered and possessed any such island, key, or rock, as aforesaid, be protected and maintained, the President of the United States be and he is hereby authorized to employ, when deemed necessary, the naval forces of the United States for such purpose.

SECTION 2. *And be it further enacted,* That, until otherwise provided by law, every such island, rock, or key, and all persons who may land thereon, and acts done, and offences or crimes committed by such persons thereon, or in the waters adjacent thereto, shall be held and deemed to have been done or committed on the high seas on board a merchant ship or vessel belonging to the United States, and be punished according to the laws of the United States relating to such ships or vessels, and offences on the high seas, which laws are hereby extended

to and over such islands; and the President of the United States is hereby empowered to make and establish such regulations as he may deem necessary or advisable, assimilated to and consistent with the revenue laws of the United States with reference to the importation of foreign merchandise to such island, key or rock, or the entry of foreign vessels or importations into the United States therefrom, until otherwise provided by law.

SECTION 3. *And be it further enacted,* That every such citizen discoverer and possessor, shall, as soon as possible thereafter, transmit to the State Department of the United States an account of his discovery, verified by his own oath, and the oath of witnesses, setting forth the particulars thereof and the latitude and longitude, and a full description of said island, key or rock; and in default thereof, all his rights and privileges as such discoverer shall inure to the United States.

34TH CONGRESS, 3d Session. } SENATE. { Ex. Doc. No. 26.

MESSAGE

OF

THE PRESIDENT OF THE UNITED STATES,

COMMUNICATING

The act of the legislature of Tennessee, respecting the purchase of the "Hermitage," for the purpose of tendering it to the government of the United States, to be used as a site for a branch of the Military Academy at West Point.

JANUARY 20, 1857.—Read, referred to the Committee on Military Affairs, and ordered to be printed.

To the Senate and House of Representatives:

I transmit to Congress copies of a communication from his excellency Andrew Johnson, Governor of the State of Tennessee, tendering to the government of the United States "five hundred acres of the late residence of Andrew Jackson, deceased, including the mansion, tomb, and other improvements, known as the Hermitage," upon the terms and conditions of an act of the legislature of said State, a copy of which is also herewith communicated.

FRANKLIN PIERCE.

WASHINGTON, *January*, 1857.

EXECUTIVE DEPARTMENT,
Nashville, Tennessee, December 18, 1856.

SIR: By the 1st section of an act passed on the 11th day of February, 1856, at the biennial session of the legislature of Tennessee, it is made the duty of the governor to purchase for the State of Tennessee five hundred acres of the late residence of Andrew Jackson, deceased, including the mansion, tomb, and other improvements, known as the Hermitage.

This purchase, in compliance with the requirements of law, at a cost of forty-eight thousand dollars, has been made, and the State has now a perfect and unincumbered title to the same.

By the 3d section of the above recited act, the governor of the State "is authorized and required to tender the said property to the gov-

ernment of the United States, upon the express condition that it be used as a site for a branch of the Military Academy at West Point."

Now, therefore, I, Andrew Johnson, governor of the State of Tennessee, by virtue of the authority in me vested, do hereby "tender to the government of the United States the said five hundred acres of the late residence of Andrew Jackson, deceased, including the mansion, tomb, and other improvements, known as the Hermitage," upon the terms and conditions as specified in the 3d section of said act of assembly.

Enclosed you will find an authenticated copy of the act referred to in this communication, which you are most respectfully requested to lay before the Congress of the United States, accompanied with such suggestions as you may deem expedient and proper as to the general government's acceptance of the tender, upon the terms and conditions therein set forth.

I have the honor to be, sir, most respectfully, your obedient servant,

ANDREW JOHNSON.

FRANKLIN PIERCE,
President of the United States.

AN ACT to purchase the Hermitage.

Whereas it is good policy in a republican government to encourage habits of industry, and to inculcate sentiments of veneration for those departed heroes who have rendered important services to their country in times of danger; and whereas Tennessee acknowledges no superior in feelings of patriotism and devotion to the Union, in whose cause the lamented Andrew Jackson acquired so much distinction: therefore—

SECTION 1. *Be it enacted by the general assembly of the State of Tennessee,* That the governor of the State be empowered, and it is hereby made his duty, to purchase for the State of Tennessee five hundred acres of the late residence of Andrew Jackson, deceased, including the mansion, tomb, and other improvements, known as the Hermitage.

SEC. 2. *Be it further enacted,* That whenever the said purchase is made, and the title to said property secured to the State, that the governor is hereby authorized to cause the bonds of the State to be issued, and to endorse the same, in an amount not exceeding forty-eight thousand dollars, the proceeds of which to be appropriated by him to carrying into effect the provisions of this act: *Provided,* That the governor and secretary of State, upon investigation, shall be satisfied said price is not exorbitant.

SEC. 3. *Be it further enacted,* That the governor of this State be authorized and required to tender the said property to the general government of the United States, upon the express condition that it be used as a site for a branch of the Military Academy at West Point; and in the event the general government does not accept the tender thus made in two years from the expiration of this session of the general assembly, then the governor shall be authorized and required to

have fifty acres laid off, including the tomb, the mansion, and the spring and spring-houses, and expose the balance to public sale, either as a whole or in lots, on time or for cash, as to him may seem best, and make his report to the legislature of 1859–'60.

SEC. 4. *Be it further enacted*, That Mr. A. Jackson, the present proprietor, shall have possession of the property for the next two years, unless the general government should apply for it, in accordance with the provisions of the third section of this act.

SEC. 5. *Be it further enacted*, That this act take effect from and after its passage.

Passed February 11, 1856.

NEIL S. BROWN,
Speaker of the House of Representatives.
EDWARD S. CHEATHAM,
Speaker of the Senate.

I, James Plunkett, acting secretary of State of the State of Tennessee, do hereby certify that the above is a true and correct copy of an act passed on the 11th of February, 1856.

In witness whereof, I have hereunto set my hand and affixed the [L. S.] great seal of State this 15th day of December, 1856.

JAMES PLUNKETT,
Acting Secretary of State.

34TH CONGRESS, 3d Session. | SENATE. | Ex. Doc. No. 27.

REPORT

OF THE

SECRETARY OF THE TREASURY,

COMMUNICATING,

In compliance with a resolution of the Senate of the 14th of August, 1856, a report of the progress on the construction and distribution of standards of weights and measures, and supply of hydrometers to the custom-houses; the balances made and distributed to States, and the legislation thereof relative to standard weights and measures.

JANUARY 2, 1857.—Read, and ordered to lie on the table.
JANUARY 21, 1857.—Ordered to be printed. Motion to print 2,000 additional copies, 750 of which to be for the use of the Superintendent. Referred to the Committee on Printing.
FEBRUARY 6, 1857.—Report in favor of the motion, and report agreed to.

TREASURY DEPARTMENT,
Washington, D. C., December 31, 1856.

SIR: I have the honor to transmit herewith, in compliance with a resolution of the Senate adopted August 14th of the present year, a report of progress, made under the superintendence of Professor Alexander D. Bache, on the construction and distribution of standards of weights and measures, and supply of hydrometers to custom-houses; also of balances made and distributed to States, and the laws severally enacted therein, relative to standard weights and measures; all of which is respectfully submitted by—

JAMES GUTHRIE,
Secretary of the Treasury.

Hon. JESSE D. BRIGHT,
President pro tem United States Senate.

Report to the Treasury Department, by Professor Alexander D. Bache, on the progress of the work of constructing standards of weights and measures for the custom-houses, and balances for the States, and in supplying standard hydrometers to the custom-houses, from the 1st of January, 1848, *to the 31st of December,* 1856.

OFFICE OF WEIGHTS AND MEASURES,
Washington, D. C., December 30, 1856.

SIR: I have the honor to present to the department a report on the progress of the work of constructing weights and measures for the custom-houses, and balances for the States, and in supplying standard hydrometers to the custom-houses since the 1st of January, 1848.

The work on the weights and measures and balances has been, as heretofore, under my general superintendence, but in the immediate charge of Joseph Saxton, esq., who has had eight mechanics and six laborers under his direction in the workshops attached to the office of weights and measures. An aggregate of only eleven hands is at this time in employ on the work. The hydrometers were furnished under the immediate direction of Professor R. S. McCulloh, in 1849, and have been supplied to the custom-houses under instructions from the Treasury Department, or, on application therefor by officers of the customs, directly from the office. A list of the various reports made on these subjects, and of the investigations in relation to the manufacture of sugar, under my superintendence, is appended. (Appendix No. 6.)

The delivery of the hydrometers, and manual for their use, to the custom-houses, gave the opportunity to examine, in some instances, the condition of the weights and measures which had been supplied to them, and to ascertain how far the law requiring comparisons with the standards was carried into execution. The hydrometers which came into the possession of the office from the custom-houses have proved to be more discrepant than had even been supposed. The result of these examinations is given in Appendix No. 7.

The report will be divided into the following heads:

1. Weights and measures for the States.
2. Weights and measures for the custom-houses.
3. Weights and measures—miscellaneous.
4. Division and comparison of standard yards.
   Saxton's dividing machine.
   Saxton's reflecting comparator and pyrometer.
5. Comparison of foreign standards with those of the United States.
6. Balances for the States.
7. Weights and measures and balances for foreign governments, &c.
8. Hydrometers for the custom-houses.
9. Gauging.
10. Laws of the States on the subject of weights and measures.

During the course of the delivery of the hydrometers to the custom-houses between Portland, Maine, and Alexandria, Virginia, by Woods Baker, esq., facts, collected in regard to the method of gauging in use, showed such a want of accordance in principle and practice as to induce the Treasury Department to direct me to have a series of investigations made under my direction by him. These were interrupted by his untimely death in the summer of 1852. Some progress was made in putting this matter into shape by Captain J. G. Foster, corps of engineers, but while engaged in that work he was relieved from duty in the Coast Survey, and I have since had no assistant available for its continuation.

1. WEIGHTS AND MEASURES FOR THE STATES.

At the date to which my last report brought the progress of the work, January, 1848, TWENTY-ONE (21) States of the Union had been

furnished with a full set of standards, and five (5) others had received a portion of them, the remainder being ready at their call. There remained the States of *Florida*, *Texas*, *Iowa*, *Wisconsin*, and *California*, to be furnished with standards, they having applied to the Treasury Department for them.

The full sets for these States have since been delivered, with the exception of the standard weights for Florida, which remain at the Treasury Department subject to the call of the executive of that State.

The other standards which, at the date of the report of 1847, were at the Treasury Department, have since been called for by the executives of the States for which they were designed, with the exception of the weights and liquid and dry measures for Mississippi.

The full sets of weights and measures thus referred to, consist of—

1. A set of standard weights composed of the following pieces:

One	50 pounds avoirdupois.		Arranged in one box.
	25 "	"	
	20 "	"	Arranged in one box.
	10 "	"	
	5 "	"	
	4 "	"	
	3 "	"	
	2 "	"	
	1 "	"	
	1 "	troy.	
One	10 ounces troy.		Arranged in one box.
	6 "		
	5 "		
	4 "		
	3 "		
	2 "		
	1 "		
	0.5 "		
	0.4 "		
	0.3 "		
	0.2 "		
	0.1 "		
	0.05 "	of silver wire.

2. A standard yard measure with matrix.

3. A set of liquid capacity measures, consisting of the following pieces:

One gallon measure, in its case

One half gallon measure.		Arranged in one box.
quart	"	
pint	"	
half pint	"	

Each with a ground glass cover.

4. A standard half bushel, with a ground glass cover, in its case.

1. The *actual standard of length*, of the United States, is a brass scale of eighty-two inches in length, prepared for the survey of the coast of the United States, by Troughton of London, and deposited in the Office of Weights and Measures. The temperature at which this scale is a standard is 62° Fahrenheit, and the yard measure is between the 27th and 63d inches of the scale.

The copies or standards made for the Treasury Department, the States, the custom-houses, &c., being of brass, the temperature at which the brass scale of Troughton is a standard is not of practical importance as far as making the copies is concerned. In fact, no differences have yet been detected in the various comparisons made between the expansion of the material of the Troughton scale and of our standards. The number used by Mr. Hassler for the expansion of

brass was derived from his experiments made at Newark in 1817, recorded in the second volume new series of the American Philosophical Society's Transactions; it was for the proportional expansion, 0.000,010,509,03, or for expansion in one yard 0.000,378,325,08 of an inch for one degree of Fahrenheit's thermometer.

2. The *units of capacity measure* are the gallon for liquid, and the bushel for dry measure. The gallon is a vessel containing 58372.2 grains (8.3389 pounds avoirdupois) of the standard pound of distilled water, at the temperature of maximum density of water, the vessel being weighed in air in which the barometer is 30 inches at 62° Fahrenheit. The bushel is a measure containing 543391.89 standard grains (77. 6274 pounds avoirdupois) of distilled water, at the temperature of maximum density of water, and barometer 30 inches at 62° Fahrenheit.

3. The *standard of weight* is the troy pound, copied by Captain Kater, in 1827* from the imperial troy pound, for the United States Mint, and preserved in that establishment. The avoirdupois pound is derived from this; its weight being greater than that of the troy pound, in the proportion of 7,000 to 5,760; that is, the avoirdupois pound is equivalent in weight to 7,000 grains troy. The pound is a standard at 30 inches of the barometer and 62° Fahrenheit's thermometer.

These standards were adopted by the Treasury Department on the recommendation of Mr. Hassler, in 1832. We shall see in a subsequent part of this report, that their distribution has tended to produce practical uniformity in the weights and measures used in the different States, and that thus the end proposed by Congress is fully answered. The early measures taken by the State of California to procure authentic standards, is strong evidence of the value attached to this practical uniformity, which can be secured in no other way than by the general distribution af authentic weights and measures.

The set of standards furnished to the State of Alabama, having been destroyed by the burning of the capitol, in December, 1849, the Treasury Department, upon application of the executive of that State, directed them to be replaced by new ones; which was accordingly done.

Twenty-four (24) States have directed the distribution of standards to their counties, or provided for the supply of copies of those of the United States. The frequent inquiries addressed by the representatives from the different States, in behalf of their constituents, and from others, induce me to suppose that there is much interest on the subject of establishing thorough uniformity in weights and measures. In a subsequent part of this report abstracts will be given of the laws passed in the various States on this subject, since the date of Mr. Adams' report, 1821. A list of the titles of the laws will be found in the Appendix; the laws themselves being too voluminous to be inserted.

The Territories not being by law supplied with these standards, each new State as it is admitted is so furnished from the stock at the office previously prepared for this purpose. Thus far it appears that the force of mechanics now employed, and which has been diminished

* See Doc. No. 299, 22d Congress, 1st session.

by deaths and other circumstances from the first periods of the work, is about adequate to prepare the necessary weights, measures and balances.

COUNTY STANDARDS.

The standards to be furnished to the counties by each of the States should consist of a standard of length, standards of liquid and of dry capacity measures, and a set of troy and avoirdupois weights, with suitable scales and beams, or balances, for testing the town standards.

1. *The standard of length* should be the *yard*, carefully copied from the United States standard yard. The bar to be longer than the scale to be placed upon it, so that the ends may project beyond the lines between which the yard is measured.

The scales of feet, inches of the first foot, and tenths of the first inch, and tenths of yard, with the first tenth divided into hundredths should be marked upon the yard with fine strokes, transversely to the length; the principal divisions being marked by longer lines than the others. The bar should be a line measure, not cut to the length of the yard, because of the greater facility which it will afford for transferring the yard to other bars, by means of a small square, similar to the one accompanying the United States standard yards, with which the yards for the counties should likewise be provided; it will also allow of other yard measures being laid upon this, in order to compare their lengths and divisions more readily.

2. *The standards of liquid capacity measures* should be the *gallon*, containing 231 cubic inches, the half gallon, quart, pint, half pint, and gill all to be made of brass. The body of the vessels to be made of sheet brass, one tenth of an inch in thickness, thickened at the top by a band to one fifth of an inch. The bottom to be made of cast brass, turned, since the effects of use, and of the comparisons if made with water, will make this necessary. The interior dimensions should be the same as the United States standards. The standards should be without handles, as they will be equally convenient for the purpose of comparing the town standards, and it will tend to prevent their being used for other purposes.

3. *The standards of dry measures* should consist of the *half bushel*, to contain 1075.21 cubic inches; the peck, the half peck and quarter peck, to be of a cylindrical form, made of stout sheet brass, one tenth of an inch in thickness, and thickened at the top by a band, to one fifth of an inch. The bottom also to be of stout sheet brass, one fifth of an inch thick, and slightly concave, to prevent the spring in the bottom, which might occur if the bottom were a plane. The interior diameter of each measure, should be equal to the height from the centre of the bottom to the plane of the rim. The half bushel should have handles for the convenience of handling, but it will be better for the others not to have them, for the reasons mentioned in reference to the liquid measures. The thickness of the bottom, one fifth of an inch, will be sufficient for these measures, as the comparisons can be made by filling with small seed, rape seed* is preferable, and "strik-

* The seed of the garden cockscomb (*Celosia Cristata*) answers the purpose best, but requires to be cultivated in quantity for this particular use.

ing" it. The form proposed, it is believed, will be found to be preferable to that of shallower vessels, or even to any other. It is similar to the French dry measures. It is more convenient for striking and handling than a shallower measure. It is to be hoped that the introduction of this form will be a step towards the final abolition of the practice of heaping measures.

4. The *weights* should be of the same form and denominations as those furnished to the States, viz: 50 pounds weight, 25, 20, 10, 5, 4, 3, 2, 1 pounds avoirdupois, and 1 pound troy, avoirdupois ounce weights from 8 ounces to $\frac{1}{10000}$ of an ounce, and troy ounce weights from 10 ounces to $\frac{1}{10000}$ of an ounce; all to be made of brass, and the outside to be turned. The large weights from 50 pounds to 1 pound, and some of the larger ounce weights may be cast hollow, and filled with lead to the proper weight, having a knob to be screwed in. This is for economy and the convenience of adjustment. The other ounce weights to be solid. The hundredths, thousandths, and ten thousandths of an ounce, may be made of silver or brass wire in the same manner as the United States ounce weights, the number of sides of the figure into which they are formed, denoting the weight, as a pentagon for *five* ten thousandths of an ounce, a quadrangle for *four* ten thousandths, a triangle for *three* ten thousandths, an angle for *two* ten thousandths, and a small bar for *one* ten thousandth of an ounce. For the purpose of comparing the town standards with those of the county, two balances, or scales and beams, will be necessary, one for large weights from one to fifty pounds, the other for small weights less than a pound. A plain beam, with its knife edges resting on the projecting arm of a single cast-iron column, dishes with proper knife edge supports, an index on the base of the column, and a long index arm attached to the beam, will essentially complete the arrangement. The knife edges with their bearing points should be made with extreme care, to insure the requisite sensibility in balances for verifying standards. The other parts may receive more or less finish, according to the proposed expense. Designs for balances of the above description, suitable for counties, can be furnished, if desired, to the executives of States. The cost of a full set of weights and measures of the kinds described, exclusive of the balances, will come within the limits of one hundred and fifty and two hundred dollars.

2. WEIGHTS AND MEASURES FOR THE CUSTOM-HOUSES.

The complete set of weights and measures for the custom-houses, according to the provisions made by Mr. Hassler, consists of—

1. A set of standard weights, consisting of the following pieces:

One	1 pound	troy.	Arranged in one box.
One	1 "	avoirdupois.	
One	2 "	"	
One	3 "	"	
One	4 "	"	
One	5 "	"	
One	10 "	"	
One	20 "	"	

One 25 pounds avoirdupois. } Arranged in one box.
One 50 " " }

2. One standard yard.

3. A set of liquid capacity measures, composed of—

One gallon, with ground glass cover.
One half-gallon, with ground glass cover.
One quart, with ground glass cover.
One pint, with ground glass cover.
One half-pint, with ground glass cover.

The principal custom-houses were furnished with the above full set of liquid measures; to the others only the gallon was furnished.

4. A standard half-bushel, with ground glass cover.

The detailed list of those delivered, with the dates and places of delivery, which is too voluminous to be embraced in the report, is placed for reference in the Appendix, (No. 9.) Of those remaining in the office, twenty-three gallons are duly packed, and ready to be sent to custom-houses. The list shows that there have been delivered to custom-houses one hundred and four (104) sets of weights, ninety-one (91) standard gallons, twenty-four (24) sets of parts of the gallon, consisting of the half-gallon, quart, pint, and half-pint; twenty-two (22) standard yards, and eleven (11) standard half-bushels.

The records of the adjustment of the measures are given in the appendix, that they may be referred to in case of any accidental loss of the label which accompanies them. Each one is marked with a number, and those issued under my superintendence with the letter B.

The form of label (Appendix No. 5) shows the comparison between the measure sent and the office standard. Mr. Saxton is engaged, when time affords from other duties, in dividing and comparing the yard measures.

The divisions on the matrix of the yard measures are made by a machine of Mr. Saxton's invention, and the comparison of the end measures with the standard by his pyrometer. Both of these beautiful instruments will be found described in a subsequent division of this report.

Directions having been received to furnish standards and balances to San Francisco, and standards to three other ports in California, and one in Oregon, as soon as practicable, in order to satisfy the necessity felt in the new State for reliable standards, and to enable the framers of the new constitution to establish them as the standards of the State, a complete set of avoirdupois and troy weights, of liquid and capacity measures, and the standard yard, were shipped in December, 1849, for San Francisco. In the following April, four other sets of standards, for the towns of San Diego, Monterey, and Sonoma, in California, and Astoria, in Oregon; together with a set of balances for the State of California, and one large balance for Oregon, were shipped on board the revenue cutter "Polk;" the standards to be delivered at their destination, with the exception of those for Sonoma, which were deposited with the collector at San Francisco. Subsequently, sets of standards were sent to Olympia, W. T., and Scots-

ville, Oregon, on application of the collector, and by direction of the Treasury Department.

The list shows that a very large proportion of the custom-houses have been supplied with standards. Those for the others are chiefly made and in the course of delivery. The custom-houses of the States of Indiana, Illinois, Missouri, Arkansas, Texas, Wisconsin, and Iowa remain to be supplied. Arrangements will be made, as speedily as the office force allows, to complete the full sets for these custom-houses.

The standards of weights and measures at Alexandria, Virginia, having become injured and soiled for want of care, were sent to the office to be repaired, and in lieu of them was returned a new set in September, 1853.

The department has also directed that the standards lost by the burning of the custom-house at Georgetown, S. C., should be replaced.

At the time of delivering the hydrometers, Mr. Baker examined the weights and measures at the following named fourteen custom-houses: Portland, Portsmouth, Newburyport, Salem, Boston, New Bedford, Barnstable, Providence, New Haven, New York, Philadelphia, Wilmington, Del., Alexandria, and Norfolk. While on Coast Survey business there, I examined those of Wilmington, N. C., ascertained the loss of those of Georgetown, S. C., by fire, and had those of Jacksonville examined through the courtesy of Dr. Baldwin.

It was gratifying to find that in general these instruments had been cared for. Those injured by improper use, which were few in number, have been or will be replaced. The standards at Providence, Rhode Island, and at Philadelphia, Pennsylvania, were especially spoken of by Mr. Baker as very carefully preserved. The inquiry into the observance of the law (Appendix, No. 2) requiring the surveyor of each port to compare the weights and measures in use with the standards of the Treasury Department also resulted satisfactorily. The observed irregularities, it is believed, can readily be corrected by a circular from the department.

Mr. Baker's detailed report is given in the Appendix, (No. 7.) It contains, besides his remarks on this subject, the circulars to the collectors in relation to the care of the weights and measures, and other information.

3. WEIGHTS AND MEASURES—MISCELLANEOUS.

Various calls have been made upon the office by departments and officers of the government and of the States for authentic standards of weights and measures, which have been answered under the authority of the Treasury Department; this is not one of the least useful purposes subserved by the office.

The Bureau of Ordnance and Hydrography of the Navy Department having applied for a set of standards to be used at the navy yard in this city, and authority being obtained in February, 1848, the following were delivered, as desired by the bureau, viz: A standard half-bushel, gallon, yard measure, a set of avoirdupois weights from 50 pounds to one pound, and one pound troy, and from 8 ounces to $\frac{1}{10000}$ of an ounce.

Two sets of troy grain weights were also furnished, upon application, August, 1852, for the same purpose.

A standard yard was furnished, upon application, to the Engineer Bureau of the War Department.

Standard yards have also been furnished, by authority, to the general land offices in California, Oregon, Washington Territory, New Mexico, Kansas and Nebraska, and Utah Territory, upon each of which were three scales, as follows: one divided to links, tenths and hundredths of a link; another to feet, tenths and hundredths of a foot; and the third to feet, inches, tenths and eighths of an inch. A precisely similar yard was also prepared for the surveyor general of Iowa, Wisconsin, and Minnesota.

A standard yard, prepared in compliance with the application of the joint commission of the army and navy for the western coast, and not being called for by the commission, was delivered, by authority, to Major I. I. Stevens, governor of Washington Territory, in 1853.

A standard yard was furnished to the Bureau of Topographical Engineers, and five others were temporarily placed at the disposal of the chief of that corps for the purpose of constructing a base apparatus for the survey of the northern lakes. Two standards were furnished to the Mexican boundary commission, with two wooden rods, of ten feet each, marked in feet and tenths.

Twenty measuring rods of two feet each were made and graduated, by direction of the Treasury Department, for use in the construction of public works. A rod graduated in a similar way, in inches and parts, was furnished for the work in progress on the Minot's Ledge light-house.

A set of ounce weights was delivered, with the balance authorized to be furnished, to the Naval Academy at Annapolis.

A copy of the standard yard, in wood, was made and furnished to J. A. Lapham, esq., of Milwaukie, Wisconsin; also the foot measure to Norris Brothers, of Philadelphia.

Three sets of ounce and half-ounce weights were delivered to the General Post Office Department, for the purpose of testing the accuracy of balances for ascertaining the weights of letters.

Twelve copies of the "Manual," to accompany hydrometers (used in the custom-houses) for testing the strength of liquors, were delivered, by authority, to the Smithsonian Institution, to be presented to foreign institutions, and one of each for the Institution.

A hydrometer and tables were furnished to J. L. Gillespie, esq., of Honeyville, Virginia, at his expense.

A copy of the "Manual" and a hydrometer were presented to the chief officer of the British excise, in return for his kindness in procuring several gauging instruments, books, &c., for this office.

Two hydrometers and "Manuals" were furnished to Messrs. Huckerath and Van Damme, New York, at their expense.

The supply of hydrometers being nearly exhausted at the opening of the present year by distributions, twenty-five more were purchased, so as to provide for requisitions from the inspector of customs. These have been tested in the office, and proved to equal in point of accuracy the lot first received of Greiner & Son.

4. DIVISION AND COMPARISON OF STANDARD YARDS.

A machine for dividing the yard measure has been constructed under Mr. Saxton's immediate direction.

The necessity for something of the kind to replace the old, laborious, and comparatively inexact mode of dividing the yard by hand was much felt, and elaborate experiments were made to determine the best arrangement of machinery for accomplishing this, as well as the best mode of comparing the length measures. The arrangement referred to for dividing the yard is very accurate, and comparatively rapid in use, needing only some slight modifications to render its operations entirely satisfactory.

Both this machine and the comparator were made in the workshop attached to the office.

The following descriptions of the two instruments are illustrated by plates I and II at the end of the Appendix.

1. SAXTON'S DIVIDING ENGINE FOR YARD MEASURES AND SUBDIVISIONS.

The purpose of this dividing machine is to trace the limiting lines, and the lines of subdivision on measures of length, by means of a travelling tracer, which, at prepared points of stoppage, is made to trace, on a matrix, lines perpendicular to its direction of travel. This machine is adapted to ruling the limits of a yard, for subdividing it into tenths, and the first tenth into hundredths. It also rules off three feet, divides the first foot into inches, and the first inch into tenths.

The main support of the machine consists of a cast-iron, horizontal, plane table, (A A, figs. 1 and 2,) to which a long brass plate, (B B, fig. 1,) is attached by screws at one end, leaving free play for expansion in the direction of the other. Stop-studs, (I I I and J J J, figs. 1 and 2,) are screwed to this plate from below, their positions giving approximately the place of the division lines. The stop-studs, (I I I, &c.,) are arranged for the yard, and tenths of the yard, (J J J, &c.,) for feet, and the inches of the first foot. Through each stud runs a horizontal steel screw, with a plane end, which is accurately adjusted so as to stop the tracer at the line to be drawn. Two brass blocks, (E and F, fig. 1,) are so arranged as to bring the matrix parallel to the travelling grooves in the plate, (D D, fig. 1,) one block, (E,) being loose, and the other, (F, fig. 1,) being screwed fast to the bed-plate. The screw, (G,) through this block, (F, fig. 1,) is so adjusted that the tracer, when its carriage is held by the first stop, shall trace the edge line of the matrix shoulder.

A spring, (K,) keeps this shoulder pressed against the zero adjusting screw. A brass carriage, (C C, figs. 1 and 2,) raised so as to clear the stops, by flanges (N N, figs. 2 and 4,) running in the angular grooves (D D, figs. 1 and 3,) of the plate, bears the tracer and all its fixtures. This carriage is made to traverse the grooves by means of a weight and connecting chain, (L L, figs. 1 and 2,) carried over a pulley at the end. Its motion is governed by an axis, (A, fig. 4,) with stop-arms, (B B,) the whole turned by a lever, (C, fig. 1.) By placing this lever vertical, the carriage traverses clear of all the stops;

by turning the lever *toward* the *tracer*, a stop-arm is made to catch on the yard subdividing stops I I I; and turning it *from* the *tracer*, a stop-arm catches on the foot and inch stops J J J. The carriage is first drawn out by hand.

For laying off hundredths of a yard and tenths of an inch, the tracer carriage is suffered to move by running a subdividing screw (P) back a given number of turns, and correcting this by an inclined plane, (M,) adjusted to cause the bearing point (E, fig. 4,) of the carriage to rotate against the screw. The screw passes through two collars, (R and Q, fig. 1,) in one of which (Q) it slides, and in the other (R) it passes through a ratchet-wheel, with a nut centre, which turns on the screw as well as in the bearing. By means of this ratchet-wheel and a ratchet-arm, the screw is arrested when it has been turned through a distance of nearly a hundredth of a yard or a tenth of an inch.

This distance is corrected by moving an inclined plane, (M,) by means of the small button, (O,) so that it will cause the bearing point (E, fig. 4,) of the carriage to rotate around a fixed point (N) in the bed-plate; the amount of correction being fixed by adjusting the inclined plane bar. Two facets give the button, (O,) and of course the inclined bar, (M,) the two positions required. When the button is turned to the left, it gives hundredths of a yard; when turned to the right, tenths of an inch.

The weight for running the tracer carriage is suspended by a flat link steel chain, (F, fig. 3,) one end of which is fixed to the table, from which it runs under a pulley fixed to the weight, up to a drum axle, (K′, figs. 1 and 3,) around which it winds. Sliding on the same axle is a drum, (A″, figs. 1 and 3,) moved along the axle by an endless screw (Z, figs. 1 and 3,) working in a fixed rack, so as to keep the carriage chain vertical at the winding point. Connected with this axle by a double gearing at B′, (fig. 1,) is a flat plate fly (K″, figs. 1 and 3,) to regulate the velocity of the carriage.

The movements of the tracer are governed by a horizontal crank, (G′, figs. 1 and 2,) on a vertical axle, which bears an eccentric (H′, figs. 1 and 4,) to push out the tracer, and a circular cam (G, fig. 4,) to bear down the rear end of the lever (C′, fig. 4,) and lift the tracer. The tracer has a double joint, for horizontal and vertical motion. The tracer is loaded at will. Above it is a micrometer microscope frame, (L′, figs. 1 and 4,) for comparing the stops with the standard.

In using this machine, the tracer carriage is moved to the left and arrested by the last stop. The matrix is carefully placed against the blocks and zero screw. The subdividing screw (P, fig. 1,) is carried out one-tenth of a yard, and fastened in the latch collar. The division of the yard is then traced. The stop-arm (B, fig. 4,) is then disengaged by means of the lever, (C′, fig. 1,) and the carriage travels to the next stop, and so on until the yard is divided into tenths. The hundredths are then marked by using the crank and ratchet movement of the subdividing screw. The feet, inches, and tenths are engraved by a second traverse of the carriage. The length of division lines is controlled by a stop-plate, (M, fig. 4,) with notches on the circumference, in which an adjustable stop of the tracer frame enters

to trace long lines; while to trace short lines the stop rests against the circumference of the stop-plate. A ratchet-wheel, (J′, fig. 1,) moved by a detent on the axle of the tracer crank turns the stop-plate. The temperature is regulated by governing the heat of the room.

FIG. 1.—PLAN OF THE YARD DIVIDING MACHINE.

A A. Cast-iron table.
B B. Brass bed-plate.
C C. Brass carriage bearing tracer, and sliding in the grooves D D.
E F. Brass blocks screwed to bed B, against which the matrix to be divided is placed; F bears the zero screw G.
H H. Matrix to be divided.
I I I. Stops-blocks, with adjusting screws, for yards and tenths.
J J J. Same for feet and inches.
K. Spring to keep the matrix up to the zero screw.
L L. Flat link steel chain leading over the pulley N″ to the weight.
M. Adjusting inclined plane bar.
N. Centre of motion of tracer carriage when guided by the inclined bar.
O. Adjusting button with two facets: when the button is turned against the right facet, the tracer marks tenths of an inch; when turned to the left, it marks hundredths of a yard.
P. Subdividing screw and rod.
Q. Fixed collar.
R. Latch collar for latching screw.
S. Toothed click plate turning on the projecting nut of the ratchet-wheel U.
T. Fixed collar in which the central nut of the ratchet-wheel turns.
U. Ratchet-wheel turning as a nut upon the screw P, and itself turned by the click of the click plate S.
V. Crank of toothed wheel W for subdividing. By turning this a certain number of times to the left, the tracer carriage is moved forward the requisite distance for the subdivision. It is first turned to the right until the crank strikes against the stop Y.
X. Sliding rod with slide supports, and a nut arm (M′, fig 3,) resting on the screw axle of the crank V.
Y. Folding stop on the sliding rod X for arresting crank V. When this catch is turned out it gives tenths of an inch; when folded in, hundreds of a yard.
Z. Endless screw, working in fixed rack, and sliding the chain drum on the axle to secure vertical winding as the weight chain runs off at A″.
B′. Gearing to drive fly-wheel.
C′. Small lever turning an axle, on which are two stop arms to catch on the stops and arrest the carriage.
D′. A spring with a roller on its end, which, when the lever C is vertical, catches in a notched cam on the horizontal axis and holds it steady.

E′. Bed-plate of tracer frame.
F′. Tracer.
G′. Crank to turn a horizontal eccentric H′ for pushing out the tracer, and also to turn a circular cam which lifts the tracer by bearing down a lever.
I′. Weight to draw back the tracer.
J′. Ratchet-wheel turned by detent on the vertical axle.
K′. Drum axle, K″ fly, O′ ratchet arm.

FIG 2.—SLIDE ELEVATION OF YARD DIVIDING MACHINE.

A A, &c. Cast-iron bed.
B B, &c. Brass bed-plate.
H H. Matrix to be divided.
I I I & J J J, &c. Stops for subdividing.
N′ N′. Flanges of the tracer carriage.
L L. Chain for drawing carriage by weight.
G G. Wheels for driving fly K″.
P. Subdividing screw.
V. Crank for running screw back through a subdivision.
M. Bar for correcting screw.
G′. Crank for running out and raising the tracer F by an eccentric and circular cam.
P. Subdividing screw.
M′. Crank to ditto.
V. Crank for running the carriage through a subdivision.

FIG. 3—END ELEVATION OF YARD DIVIDING MACHINE.

A A. End support of iron bed.
B B. Brass bed-plates.
D D. Angular grooves.
L. Chain connecting with weight.
Z. Endless screw on sliding chain drum.
F. Weight chain wound on drum K at A′.
K″. Fly.
M′. Crank of subdividing screw.
V. Crank for running the carriage through a subdivision.
O′. Ratchet arm.
U. Ratchet-wheel.
L′. Click.

FIG. 4. PROJECTION OF TRACER CARRIAGE FROM UNDERNEATH.

A′. Axis bearing stop-arms B B.
C. Pin to slide on inclined bar.
D. Centre of motion.
E. Bearing point.
H′. Eccentric for pushing out the tracer.
G. Cam for lifting tracer.
C′. Lever on which the cam acts.

F. Tracer.
L′. Micrometer microscope mounting.
I′. Weight to draw the tracer back.
M. A stop plate, having upon its circumference notches at certain intervals, so that a stop projecting from the tracer frame enters the notches at the proper time, and thus allows the tracer to mark the long lines necessary to indicate the foot, six inches, &c.; the stop rests against the circumference in marking the short lines.

FIG. 5.

U. Ratchet-wheel.
S. Click-plate in contact with ratchet-wheel.
C. Central nut of ratchet-wheel.

II. SAXTON'S REFLECTING COMPARATOR AND PYROMETER.

This very ingenious instrument has been applied to comparing the yard of the kind called end measure, in which the distance between the two ends of the bar is the length of the standard yard. One end of the bar to be compared abuts against a fixed support, the other end is free to move, the whole bar being supported horizontally on rollers. The free end presses against a small horizontal bar or slide connected by a chain with a vertical axis carrying a small mirror. As the free end of the bar moves, the slide moves also and turns the mirror. A scale placed horizontally at any convenient distance from the bar and in the same general direction, is reflected in the mirror, the image being viewed by a telescope placed at the same distance as the scale, and directly over it. The distance of the reflected image of the scale being twice that of the scale from the mirror; the motion of the mirror is shown as on a divided circle of that radius, and the smallest movement of the mirror is measurable.

The same principle is applicable to other forms of length measure, and has been also applied to detect eccentricity of the axis or pivots of instruments, and of motion.

Fig. 1, plate II, shows the general arrangement of this apparatus, and figs. 2, 3, 4, 5, and 6, give the parts more in detail. Fig. 1 shows the arrangement of the bar, its supports, the mirror, and other parts connected with it at A A; the scale at R S; the telescope for observing at T. Fig. 2 gives the details of the telescope and support for it, and for the scale shown by fig. 3. Fig. 4 is the elevation; and fig. 5 the plan of the mirror and connected apparatus, and of their support. Fig. 6 shows the connection of the mirror and of the stem which communicates movement from the standard bar to the mirrors.

The following is a detailed description of the arrangement of the parts: In fig. 1, plate II, A A represents the plan of the stone supports and frame, on which the bar is placed, drawn on a scale of one-sixteenth of the actual size. (A) A, A, are three stone piers which rise two and a half feet above the floor of the comparing room, but not connected with it, and support the instrument. C C is the position of the bar which is placed horizontally on the rollers B, B, B,

one end resting against the abutting screw D, and the other acting on the mirror M to turn it. The lower part of the fig. (A) shows the arrangement of the telescope T and attached scale R S.

Fig. 2, plate II, represents the plan of the telescope and part of the attached scale drawn one-fourth of the full size. The telescope rests in Ys (Y Y) attached to a movable bed-plate, and adjusted by the screws S.

Fig. 3, plate II, is the elevation of the scale of its full size, the line above the division indicating the side of the zero, which corresponds to diminishing lengths. Each of the small divisions of the scale, as used in the office comparisons, corresponds to a difference of $\frac{1}{25000}$th of an inch on the bar. The small reflector is represented of full size by figs. 4 and 5—fig. 4 being the elevation, and fig. 5 the plan of the reflecting apparatus. E represents the plan and elevation of the plate, by which the apparatus is fastened to the stone post, on which it rests. G represents a slide in which the abutting screw S is inserted, and against which the end of the bar is placed; this slide moves on two uprights firmly fastened to the plate F. The mirror M, on a vertical axis, turns on hardened steel centres, and is supported above by a bracket fastened to the plate F. A small fusee chain passes once round the axis, and is secured from slipping by an arrangement represented at fig. 6. Both ends of this chain are fastened to the slide—one by a small bracket at H, on the edge of the slide, and the other by the small spring I which keeps it stretched. Thus, when the slide moves, a rotary motion is communicated to the axis of the reflector. The spiral spring I, attached at one end to the slide, and at the other to one of its bearings, serves to draw the slide close against the end of the bar to be measured. The abutting screw S has one hundred threads to the inch, and a micrometer head (N) divided into ten equal parts. One turn of the screw would, therefore, increase or diminish the length by one-hundredth of an inch, ten turns by one-tenth, &c.; while each division on the head would correspond to one-thousandth of an inch. Whole turns of the screw are shown by a small scale on a sliding bar K, which is kept in contact with the side of the slide G by a spring L. The bar carries an arm which, rising to the top of the micrometer head, gives the means of setting.

The manner of comparing a bar with the standard may now be explained. The standard is placed upon the rollers of the frame, one end resting against the fixed abutting screw D; the other adjusted against the abutting screw of the pyrometer in such a manner that when the observer looks through the telescope T, he will see the zero of the scale reflected by the small mirror. The standard being removed, the bar to be compared is inserted in its place, the end resting against the fixed screw D; if its length differs from that of the standard, the mirror is moved, showing no longer the zero, but some other division; and the number of divisions moved over, gives, in twenty-five thousandths of an inch, the difference in length between the bar and standard. The mode of using this instrument as a pyrometer is obvious.

[illegible], while the carriage rested against the defining the yard on the machine.

The expansion given for the bronze bar is slightly less tha assumed for the brass of which the dividing machine and the U States standards are made. The comparisons, however, are m

OBVIOUS.

5. COMPARISONS OF FOREIGN STANDARDS WITH THOSE OF THE UNITED STATES.

A. *Comparisons of British Standards.*

Copies of the new British standards of length and weight have been presented to the United States by the British government, through *G. B. Airy*, esq., Astronomer Royal. They are accompanied by the following statement:

Copies of the British standards of length and weight enclosed in box No. 10, *and addressed to the United States of America.*

Bronze standard of length No. 11.

Malleable iron standard of length No. 57.

At the bottom of each of the two holes near the extremities of each bar is a gold pin, upon which are drawn three transversal lines and two longitudinal lines. The length one English yard is defined by the distance from the middle transversal line in one hole, to the middle transversal line in the other hole, using the parts of those lines which are central between the longitudinal lines, the temperature of the bronze bar No. 11 being 61°.79 Fahrenheit, and that of the iron bar No. 57 being 62°.58 Fahrenheit. The expansion of the bronze bar is 0.000342 inch, and that of the iron bar is 0.000221 inch, for each degree of Fahrenheit.

Standard weight No. 5.

This weight is heavier than the (commercial) British pound of 7,000 grains by 0.008 grains.

G. B. AIRY.

DECEMBER 21, 1855.

The bronze standard No. 11 has been compared with the United States standard, viz: the yard from 27 to 63 inches, on the 82-inch Troughton scale. The comparisons were made by Mr. Saxton, in part, by means of the Troughton comparator, and mainly on the dividing machine. The following are the results of the comparisons by the former method:

May 8,	British	bronze	standard	shorter	0.00093	inch,	temperature	59°.0
8	"	"	"	"	0.00090	"	"	59°.0
9	"	"	"	"	0.00090	"	"	63°.0
Mean of three comparisons.....					0.00091	"	"	60°.3

A considerable number of comparisons were made on the dividing machine described in a former part of this report, the details of which are given in Appendix No. 22, Table I. A microscope-micrometer was mounted on the tracing-frame, and its wires brought into contact with the lines on the standards, while the carriage rested against the stops defining the yard on the machine.

The expansion given for the bronze bar is slightly less than that assumed for the brass of which the dividing machine and the United States standards are made. The comparisons, however, are made at

temperatures so near that at which the bars have their standard length, that no correction on that account would be sensible.

The following is an abstract of the results:

British bronze standard shorter than the American yard.

Means of comparisons	May 1, 1856	0.00065	inch.
	May 2	0.00069	"
	May 8–9	0.00091	"
	Oct. 14	0.00088	"
	Oct. 15	0.00088	"
	Mean	0.00080 ± 0.00004	inch.

In these comparisons the two standards are virtually at the same temperature, as long as we assume the expansion of the comparator to be the same as that of the bars compared. The British standard, however, is at its true length at a temperature of 61°.79 Fahrenheit, or 0°.2 less than the standard temperature of the American yard. The above difference requires, therefore, to be increased by the corresponding expansion of the British standard = 0.00007 inch, and we find thus that the British standard is shorter than the American yard by 0.00087 inch—a quantity by no means inappreciable. A difference in this direction, amounting to about one-thousandth of an inch, has long been indicated by indirect comparisons; but a full discussion of the subject must be postponed until after the publication of the report of the committee having charge of the construction of the new British standard.

Comparisons of the British iron standard are still in progress.

The copy of the British standard commercial pound was compared with the American standard commercial pound—the weight used being that made by Mr. Hassler from the troy pound in the United States mint, and marked with a star, (commonly designated as the *star pound.*)

By forty weighings, (see Table II, Appendix 22,) Mr. Saxton found the British weight No. 5 heavier than the American pound by nine one-thousandths of a grain; and since it is stated to be heavier by eight one-thousandths of a grain than the British commercial pound of 7,000 grains, there is but a thousandth of a grain outstanding between the American and British standards of weight—an agreement quite surprising when we consider the process of subdivision and addition by which these pounds of 7,000 grains were, in both instances, derived from the respective troy pounds, which were assumed equal; the United States mint pound being a copy of the imperial troy pound made by Captain Kater in 1824.

B.—*Comparison of French standards.*

The brass kilogramme, forming part of the set of weights and measures presented to this country by France in return for a set of United States standards, (see a subsequent part of this report,) was compared by Mr. Saxton with the original brass kilogramme bearing the stamp of

the French committee on weights and measures, and belonging to the American Philosophical Society, having been originally brought to this country by Mr. Hassler.

The comparisons are given in Table III of Appendix 22. It appears from them that the committee kilogramme is lighter than the new one, by Mr. Silberman, by 0.170 grain, and, consequently, lighter than the French standard is at present by 0.125 grain, or eight milligrammes—an amount by which the several copies made by the committee probably did not differ originally. The weight in question is in excellent preservation, but the casting appears to have some imperfections, and moisture or oil which has since evaporated, may have originally been contained in the small holes.

The same committee kilogramme was compared with the platinum kilogramme, by Fortin, procured by Mr. Gallatin, and certified by M. Arago not to differ by one milligramme from the platinum kilogramme in the archives of France. Table IV, of Appendix 22, gives the comparisons made by Mr. Saxton, from which it appears that the platinum kilogramme is heavier by 1,626 grain. The difference of buoyancy in air is stated by the French committee at 88.4 milligrammes, which is equal to 1.30 grain. The committee kilogramme would thus be 0.326 grain lighter than the platinum kilogramme.

The same weights were compared by Mr. Hassler, (see H. Doc. No. 299, 1832, Schedule M, p. 33.,) and the difference found to be 1.404 grain.

Comparisons of the new French measures and weights with the American standards are in progress.

C.—*Comparison of the Mexican Vara.*

A Mexican vara, the standard of length, brought from Mexico at the close of the war, by Major Turnbull of the Topographical Engineers, was presented to the office by Colonel Abert, chief of the Topographical Engineers; a careful comparison of its length with the standard of this country was made under my direction, which gave its length to be = 32.9682 inches at 58°.7 Fahrenheit. The results of the comparison are appended. (Appendix No. 22.)

This measure was made by soldering sheet brass upon the tinned surface of an iron bar.

The comparison showed a variation from temperature similar and nearly identical with that of an iron bar; and it was this circumstance that first drew attention to the brass covering of the vara, which was intended, no doubt, as a protection against the corrosion of the iron bar. The division lines on the vara were too coarse to admit of a good comparison, and it was necessary to take the edges of the divisions as the true division, as it was impossible to define the centre of the coarse line. It is understood that this vara was one of a number prepared for distribution to the several states of the Mexican republic, and deposited in the archives of the capital at the time it was captured by the American army.

6. BALANCES FOR THE STATES.

These are constructed by direction of Congress, under the joint resolution of 1838, and are intended to furnish to the States the means of adjusting standard weights and smaller capacity measures.

Report has been made from time to time of the progress of the work by the first superintendent, Mr. Hassler, and by myself. The progress up to 1845 was stated in my first report, and that to January, 1848, in my second.* As there stated, the yearly progress on the work is about thirteen per cent. of the whole, when the workmen are employed steadily on the work, and are not drawn off to execute the weights and measures. Since that date, the per centage has been very nearly the same, although the work upon the large balances for the United States mint at New Orleans and Philadelphia, involving, from their size, the necessity for entire new patterns, tended to lower the per centage in the aggregate.

At the date of that report, the whole number completed was eighteen (18) of the first class, nineteen (19) of the second, and thirteen (13) of the third class. At the present time, the whole number completed is thirty-one (31) of the first class, thirty-one (31) of the second class, and thirty-five (35) of the third class.

As soon as there were on hand enough balances to make it safe to do so, I issued the circular marked A, (Appendix No. 4,) to the governors of the different States, informing them that the balances were ready for delivery, and that they would be put up at the State house, recommending, at the same time, that a fire-proof room should be prepared for them, of which a drawing was given, and that they should be placed, with the standards of weights and measures, under the charge of some scientific person who would attend to their use and safe-keeping.

This circular has been re-issued occasionally, and has met with increasing attention, the executives of many of the States having induced the legislatures to make suitable provision for keeping these instruments and the standards.

At the date of my report, in 1848, eight States had been furnished with a set of balances, namely: New York, New Jersey, Delaware, Ohio, Texas, Maryland, Massachusetts, and South Carolina; since that time, Maine, Pennsylvania, Virginia, Connecticut, Iowa, Kentucky, Tennessee, Wisconsin, and California, have each received a full set, and one first class balance has been sent to Oregon, two large and two of medium size with the Japan expedition; one large and one small balance to the government of France, and two of the largest size, specially adapted to weighing of coin, have been sent to the mints at Philadelphia and New Orleans.

---

*Letter from the Secretary of the Treasury, communicating the report of Prof. Alexander D. Bache, relative to standard weights, measures, and balances, February 27, 1845. Doc. No. 159, House of Representatives, Treasury Department, 28th Congress, 2d session.

Letter from the Secretary of the Treasury, transmitting a report of the progress made in the construction of standard weights, measures, and balances during the years 1846 and 1847, August 12, 1848, 30th Congress, 1st session. Ex. Doc. No. 84, House of Representatives.

The balances for the State of Pennsylvania were set up in the capitol by Mr. Saxton in August, 1850. Those for Virginia were delivered also by Mr. Saxton, in November, 1850, and placed in the capitol at Richmond. The balances for Maine were sent to the order of the executive, in November, 1850. Those for California were shipped from New York, with the weights and measures, on board the revenue cutter Polk, in 1850, to be delivered at San Francisco.

The set of balances forwarded to the State of Texas, in 1848, under the charge of Mr. Fauntleroy, assistant United States Coast Survey, were delivered by him to the collector at Galveston. They remained there until so much corroded as to render extensive repairs necessary. They were brought back to the office, and now remain subject to the call of the executive of that State, having been put in perfect order again.

The number of balances on hand being greater than the calls for them, I again, in August, 1853, addressed a circular, of the form previously used, to the governors of those States yet to receive balances, (Appendix No. 4,) informing them that they were ready for delivery, and recommending again a suitable form for a fire-proof building that should be provided for them. In answer, applications were received from the executives of Kentucky, Louisiana, Alabama, and Michigan. The balances for Kentucky were accordingly sent by express to the direction indicated by the governor. They were accompanied by a set of avoirdupois ounce weights, from 8 ounces to $\frac{1}{10000}$ of an ounce. The balances for Louisiana and Michigan are ready to be forwarded as soon as I am advised of the mode by which it is desired to have them sent and the persons appointed to receive and take charge of them. Those for Alabama will be sent at an early day, when a person can be spared from the office to put them up in the place designed for their reception. Indiana was not then prepared for their reception. The executive of Rhode Island awaits the action of the legislature in regard to preparing a suitable place of safety for the standards and balances. No answers have been received from the other States to which the circular was sent.

A balance made from the same patterns which were used in those of the mints at Philadelphia and New Orleans, was sent, by direction of the Treasury Department, with copies of the standards of weights and measures, to the World's Fair, London, where a medal was awarded to the articles of the highest class that an instrument not claiming to be an invention could receive. This balance was entirely from original designs by Mr. Saxton.

The first and third class balances sent to the government of France have been placed in the "Conservatoire des Arts et Metiers," of Paris, and are the subject of an elaborate and highly favorable report (Appendix No. 17) by the distinguished curator of that establishment, M. Silberman. The balance designed by Mr. Saxton, and those by Mr. Hassler, modified by Mr. Saxton, and made in the workshops of the office, have thus received the approval of the highest European authorities.*

* These balances and weights and measures were, by the kindness of M. Vattemare, placed in the French Exhibition of the Industy of all Nations, and received the award of a complimentary medal.

The city of Washington has applied for balances, the delivery of which has been authorized. They remain subject to the call of the mayor, as I understand no safe place has been provided for their reception.

A small balance, with the necessary weights, was authorized, (Nov. 1851,) upon application, to be loaned to Prof. Henry, of the Smithsonian Institution, for the use of the commission appointed to examine the building stone offered for the extension of the Capitol. It was to be returned at the termination of the investigations.

A medium-sized balance of the kind constructed for the States was authorized to be loaned, (Nov., 1853,) upon application of the Navy Department, to J. H. Alexander, esq., of Baltimore, for the purpose of conducting a scientific investigation upon the character of alimentary substances used as subsistence in the navy. The balance and weights are to be returned when the investigation is completed.

A table is appended (Appendix No. 8) showing the States, foreign governments, &c., to which balances have been delivered under authority, with the dates of their delivery, &c., together with a list of the balances in use in the office of weights and measures. By reference to this table, it will be seen that sixteen States have been furnished with a set of balances, comprising the first, second, and third sizes, exclusive of Texas, from which State the balances were subsequently returned, and the Territory of Oregon, to which a large size balance was furnished. Four foreign governments have each been presented with one or more of the balances included in the set for the States; making, in all thus delivered, four of the large size, two of the medium, and one of the small size.

The total number delivered is twenty of the large size, sixteen of the medium, and the same number of the small size.

Assuming thirty-five as the number of sets to be constructed for the States, there yet remain to be constructed, to complete this number, and supply the place of those presented to foreign governments, four of the large and four of the medium-sized balances.

In the work upon the balances, the castings are made, and the rough filing of the different pieces executed, as far as practicable, by the laborers, after which the pieces for a number of balances (say three at a time, with the present force of five mechanics) are taken up and carried through the different processes of smooth filing, or turning, fitting, grinding, polishing, &c., until they are finished and ready to put together. Several instruments are thus in progress at once; and when the parts are complete, they are assembled, and each instrument is placed in its case and adjusted.

Since the 1st of January, 1848, thirteen of the first class balances, twelve of the second, and twenty-two of the third size, have been made at the office.

Adding to the above the construction of fifty-one sets of small capacity measures, consisting of the half gallon, quart, pint, and half pint; of forty sets of avoirdupois ounce weights, from 8 ounces to $\frac{1}{10000}$ of an ounce; of fifty-four sets of troy ounce weights, from 10 ounces to $\frac{1}{10000}$ of an ounce; and the construction of the yard-dividing

machine—the sum presents the production of the establishment, as far as the workshops are concerned, for the past nine years.

7. WEIGHTS, MEASURES, AND BALANCES FOR FOREIGN GOVERNMENTS.

After the burning of the Parliament houses in London, and the destruction at that time of the English standard of measures deposited there, from which our own is derived, Congress ordered, by a resolution of both houses, that a complete set of the standards of the United States be prepared and presented to the British government; which was accordingly done, and the standards, together with one of the largest size balances, were transmitted by our minister in London. (See Mr. Hassler's report, November 12, 1843.) Judging that similar presents to the other governments of Europe would aid in obtaining and diffusing a correct knowledge of the actual standards of different nations and tend towards the attainment of the great object of international uniformity of weights and measures, and France being in importance next to be considered, Congress, by a joint resolution, approved June 30, 1848, "*Resolved*, * * * that the Secretary of State be directed to furnish to Alexander Vattemare one complete series of the standard weights and measures of the United States, now in the Department of State, to be presented to the Department of France." In accordance with which, and with the direction of the Treasury Department, of November, 1848, a complete set of the standards, after a careful re-comparison with the standards in this office, was delivered to M. Vattemare,* in November, 1850, to be presented to his government. Correspondence in relation to this subject will be found in the Appendix, No. 17. The following is a list of the standards thus sent:

List of weights and measures sent to France, November, 1850.

1 large size balance. 1 small size balance.	The different parts being packed in seven boxes.

Capacity measures.

1 half bushel.	Contained in a mahogany box with velvet fittings, which was placed in an outer packing box.
1 gallon measure.	Fitted as above.
1 half gallon. 1 quart. 1 pint. 1 half pint.	Contained in one box.

NOTE.—Each of the capacity measures was provided with a ground glass cover.

Avoirdupois weights of 50, 25, 20, 10, 5, 4, 3, 2, 1, and 1 pound troy, fitted in two mahogany boxes, and both placed in one packing box.

* Agent for international exchanges.

Set of avoirdupois ounce weights, from eight ounces to $\frac{1}{10000}$ of an ounce, packed in a mahogany box.

Set of troy ounce weights, from ten ounces to $\frac{1}{10000}$, packed in a mahogany box, and placed with the box of avoirdupois ounce weights in one of the boxes containing the parts of the large balance.

Standard yard, with matrix of brass, fitted in a mahogany box, in an outer packing box.

The following tables show the comparisons of the weights and measures sent to France with the standards in this office:

By direction of the Treasury Department, one of the balances of the largest and one of the smallest class were sent to the government of France with the weights and measures.

The high terms of praise in which M. Silberman, than whom there can be no better judge in Europe, speaks of the weights and measures and balances received from the United States, is a rich reward for the labor bestowed upon them. His appreciation of the balances was shown by the gratifying fact that he used the smaller one, especially adapted to the purpose, to compare the platinum kilogramme which he sent to the London World's Exhibition. He remarks that its sensibility and constancy of results are beyond all reproach, and that his weighings have been made with certainty "to half a milligramme." This praise is the more highly appreciated that it is exceedingly discriminating—the parts selected for special notice, and the qualities attributed to them and to the instruments, being so well chosen. As

the praise applies to Mr. Hassler and to Mr. Saxton, I may speak thus unreservedly in regard to it. (Appendix No. 17.)

The government of France, in return for this courtesy on the part of the United States, presented, through M. Alexander Vattemare, a complete sets of weights, measures, and balances, consisting of three different series: the first being composed of a standard metre of steel upon a brass base, and a standard kilogramme of brass gilt; the second, of a brass metre divided, and of a litre, both made by Gambey; and the third of the series of weights and measures which compose the assortment of a bureau of verification of the first order, in which was also included the apparatus for weighing, measuring, and sealing, necessary to these bureaus.

This was accompanied by a valuable article by M. Silberman, the director of the National Conservatory of Arts and Trades, upon the verification of the standards, and also describing his new process for determining the expansion of metal bars. This process was employed for the first time in the comparison of the standard metre for the United States.

The process which had previously been used with satisfaction as regards the accuracy of the results gave the expansion to a sixteenth of a millimetre; but the process of M. Silberman carries the accuracy to the one hundredth of a millimetre. In order to trace the exact length of a metre upon the bar at the temperature of 0° and 100° centigrade, a new method was designed and used by M. Silberman, and consists, essentially, in using a beam compass with very solid points, (the extreme points of which are of tempered steel, turned and sharpened with extreme care, and are at the distance of a metre apart,) which is placed in a trough filled with melting ice, having holes to allow the points to project. The bar upon which the distance is to be marked is also put in melting ice, and after remaining two hours, is taken out and the points of the beam compass applied. This gives the length upon the bar of a metre at the temperature of melting ice. The bar is then placed in boiling water for two hours, and then the invariable length of the beam compass again applied. The difference gives the expansion for the difference of temperature of melting ice and boiling water. The full description of this method, as well as the apparatus for and process of verification, is given in the translation of M. Silberman's article. (Appendix No. 18.)

The absolute expansion of the metre of annealed steel sent to the United States was found to be 1.0502 millimetres between the temperature of 0° and 100° centigrade (32° and 212° Fahrenheit.) Compared with the standard of plantinum deposited at the Conservatory of Arts and Trades, the annealed steel metre was found to be 0.0226 millimetres too short, while the brass metre (by Gambey) also sent to the United States, is 0.299 millimetres too long at 0° centigrade (32° Fahrenheit.)

The comparison by M. Silberman of the gilt kilogramme, No. 6, sent to this country, with the platinum kilogramme deposited in the Conservatory of Arts and Trades, and of the latter with the platinum kilogramme of the archives of State, gave: gilt kilogramme No. 6 = 0.00047 × weight of platinum kilogramme of the conservatory =

1,000.00291 grains of the standard kilogramme of the archives. To render the system complete, the relation of the money standard, the *franc* is given by its weight, which is five grammes, and by law consists of an alloy of nine parts of pure silver and one of pure copper.

To the description and results of the several verifications, were added, at the request of M. Vattemare, interesting extracts from a letter from M. Silberman to him, (see Appendix No. 17,) in which the learned director of the conservatory expresses the satisfaction and pleasure which the examination of the United States standards, and especially the balances, gave him; paying a high compliment to the precision and sensitiveness of the latter. A brief history is given of the first idea of the metrical system, springing up amid the errors and discrepancies of the various systems of weights and measures then tolerated in Europe, of the authors of the first movement and the actual steps taken during the revolution, with the final triumph of science, art, and energy, in its adoption by France, and its extension and adoption by several nations of Europe and of America.

The earnest hope is expressed that at no distant day the United States and France, nations so closely united on so many accounts, may also cherish the bond of union of uniform weights and measures, by the adoption of the common unit, the metre. Interest thus expressed, and the generous appreciation of the efforts and progress made in this country towards perfecting a system of weights and measures, coming from a philosopher so worthily at the head of a department embracing that subject in France, cannot but be gratifying to the people of this country. M. Silberman has truly labored to present to us types of the French standards of exceeding exactness, to the verification of which the products of his own invention have lent additional precision.

The value of this beautiful present of the French government is heightened by this circumstance, and by the courtesy shown by M. Vattemare in transmitting the collection to this government, as well as in his unsparing exertions in the matter.

8. HYDROMETERS FOR THE CUSTOM-HOUSES.

The act of Congress of January 12, 1825, authorized the Secretary of the Treasury, under the direction of the President, "to adopt and substitute such hydrometer as he may deem best calculated to promote the public interest in lieu of that now prescribed by law, for the purpose of ascertaining the proof of liquors; and that after such adoption and substitution, the duties imposed by law upon distilled spirits shall be levied, collected and paid, according to the proof ascertained by any hydrometer so substituted and adopted." (See Appendix No. 3.)

An examination of some of the principal custom-houses having shown that there were great irregularities in proving, consequent on the use of hydrometers which did not agree in the indications, either from original defects in construction, or from injury to the instruments, I was requested to direct a series of researches to furnish an instrument which should be unexceptionable in theory and practice, to have a sufficient number of these made to supply the principal custom-houses, and to cause them to be duly distributed. Professor R. S. McCulloh,

now of Columbia College, New York, undertook the researches, which he executed with great industry and ability, and reported upon in part in 1845, and in full in 1847.* Tralles' hydrometer, recommended therein, was adopted by the department, and a number of sets of the instrument sufficient for immediate use were obtained from Greiner, of Berlin, and after being carefully compared by Professor McCulloh, were distributed in part to the principal custom-houses. A manual for use with this instrument was prepared by the same scientific gentleman and printed in a very neat and portable form, and with very plain directions for use. In order to facilitate the introduction of this new and perfect instrument, and of the manual, my assistant, Woods Baker, since deceased, delivered them in person to the custom-house officers by whom they were to be employed, and explained and illustrated their use. In a subsequent visit to the same custom-houses, Mr. Baker reported: "I was informed by the surveyors, as well as by the subordinate officers using the instruments, at the Boston, New Haven, New York, and Philadelphia custom-houses, that the new hydrometers are considered greatly superior to the old ones in point of simplicity." The markers at all these places were instructed in their use, and performed the operations properly. Having delivered these instruments personally at Wilmington, North Carolina, Georgetown, South Carolina, and Savannah, and examined that at Charleston, I can unite in bearing testimony additional to that of Mr. Baker in regard to the ease with which the officers of the customs learned the use of the instruments and of the tables.

The hydrometer for testing the strength of liquors imported at the custom-houses is a combination of the alcoholometer of Tralles, with a Fahrenheit's thermometer, made by J. C. Greiner, sr., & Son, of Berlin. It consist of a tube, closed at each end, the part near one end being swelled to contain a Fahrenheit's thermometer, with a carefully graduated scale. The other portion of the tube has within it an accurately graduated hydrometer scale. When placed in the liquid to be tested, it is held vertical by the weight of the large end, and the transparency of the tube allows both the hydrometer and thermometer scales to be easily read.

The directions for the use of the above instrument, together with a "manual of tables," by which the *true per cent.* of alcohol contained in

---

*The titles and dates of these reports are as follows:

1. A report of chemical analysis of sugars, molasses, &c., and of researches on hydrometers, made under the superintendence of Professor A. D. Bache, by Professor R. S. McCulloh, February 17, 1845, Senate Doc. 165, 28th Congress, 2d session.

2. A report of scientific investigations relative to the chemical nature of saccharine substances, and the art of manufacturing sugar, made under the direction of Professor A. D. Bache, by Professor R. S. McCulloh, February 27, 1847, Senate 209, 29th Congress, 2d session.

3. Second report on inquiries and researches, relative to hydrometers, &c., made under the superintendence of Professor A. D. Bache, by Professor R. S. McCulloh, May 29, 1848.

There are two reports from the Treasury Department, dated June 15, 1844, and July 31, 1846, relating to this subject. The first communicating copies of regulations in relation to the importation of foreign sugar and molasses, Senate Doc. 12, 28th Congress, 2d session. The second relative to frauds in recent importations of sugar and molasses from the West India islands, and the measures necessary to prevent their recurrence. Senate No. 467, 29th Congress, 1st session.

any gauged volume of imported liquor could be ascertained for any observed temperature, from 20° to 100°, and for any indication of the hydrometer, were delivered with the instruments.

The "manual" contains three tables, of which the first shows the "true per cent." of alcohol by volume, or the number of gallons of pure alcohol in 100 gallons of spirit, for every indication of the hydrometer from 20° to 100° of Fahrenheit's thermometer, the number of gallons or the volumes being measured at the standard temperature of 60° of Fahrenheit's thermometer.

The second table shows the "volume" which 1,000 gallons of pirit, measured at any temperature from 20° to 100° Fahrenheit, would become if brought to the temperature of 60° Fahrenheit, the true per cent. or strength being known.

The third table is a combination of the first and second; it gives by inspection, for any gauged quantity, particular temperature and corresponding indication of the hydrometer, the proportion, or *per cent.*, of that quantity which is pure alcohol. As the "*commercial values*" of liquors are proportioned to their quantities and strengths, or to the total amount of alcohol they contain, this table is consequently one by which spirits may be bought and sold, and duties justly levied. Table III is therefore the only one that the gauger and prover need use; but in its use it should be particularly observed that both the gauging and proving must be performed at one and the same temperature. If this is impracticable, resort must be had to the other tables to reduce the result of observation to the standard temperature and volume.

The Tralles hydrometer and manual have been delivered at the following named custom-houses:

Portland, Maine,
Portsmouth, New Hampshire,
Newburyport, Massachusetts,
Salem, Massachusetts,
Boston, Massachusetts,
New Bedford, Massachusetts,
Barnstable, Massachusetts,
Providence, Rhode Island,
New Haven, Connecticut,
New York, New York,
Philadelphia, Pennsylvania,
Wilmington, Delaware,
Baltimore, Maryland,
Alexandria, Virginia,
Richmond, Virginia,
Petersburg, Virginia,
Norfolk, Virginia,
Wilmington, North Carolina,
Georgetown, South Carolina,
Charleston, South Carolina,
Savannah, Georgia,
New Orleans Louisiana.

In addition, they have been sent to the following named custom-houses on the western coast, by direction of the Treasury Department:

San Francisco, California,
Benicia, California,
Monterey, California,
San Diego, California,
Astoria, Oregon,
Puget's Sound, Washington Territory.

The first set sent to San Francisco was destroyed by fire, and on application from the collector a second set was transmitted. The detailed report on the delivery of these instruments and manuals, by Woods Baker, esq., is given in the Appendix, (No. 7.) It contains valuable matter in reference to the subject, including the circulars of the Treasury Department and of the Office of Weights and Measures to the officers of the customs. Mr. Baker embraces in the same report a statement of the performance of his duty in receiving the old hydrometers and in examining the weights and measures which had been delivered to the same custom-houses. The last named portion of the report I have already referred to. "The old hydrometers" (as reported by Mr. Baker) "collected at the several custom-houses visited were of various constructions, though chiefly of Dycas' patent, and with but few exceptions, in a most dilapidated condition."

A detailed statement in reference to all these instruments and to the comparisons of them subsequently made in the office will be found in Mr. Baker's report. The table of comparison "shows conclusively the unreliability of the instruments, and the great necessity of withdrawing them from use, and substituting for them instruments more simple in principle and less liable to become deranged." It is better that an instrument should be broken, than that, being injured, it should be used, while giving false indications. The glass instrument is therefore to be preferred to that of thin metal, and several glass hydrometers can be purchased for the cost of a single metallic one. In a mixture of alcohol and water of 80 per cent. strength, (of alcohol,) different instruments marked from 253 to 234; in a 50 per cent. mixture, from 177 to 112; in a 24 per cent. mixture, from 107 to 49. These results are in accordance with those previously obtained by Professor McCulloh, and which he thus summed up: "From the preceding statements, it will be evident that, with but few exceptions, I found the instruments now in the hands of the officers of the customs wholly unfit for use, by reason of accidental injuries which they have suffered, so that generally it would be impossible to determine with them the true strength of any liquor imported and subjected to their examination."

The remaining hydrometers will be delivered as occasion may serve, or as calls are received for them from other custom-houses, and as the instruments now in use may be broken. The experiment of introducing them has been successful beyond the most sanguine expectation.

9.—GAUGING.

By an act of Congress passed in 1799 it is made the duty of the "surveyor" of each port of entry to "examine and try, from time to time, and, particularly on the first Monday in January and July of each year, the weights and measures and *other instruments* used in ascertaining the duties on imports, with standards to be provided at the public expense," &c. (See Appendix No. 2.)

This law had for its object to carry out the provision of the constitution, by establishing in all the custom-houses a uniform system of weights and measures, and of gauging casks containing imported liquors. It was, however, clearly shown, by the learned report of the Hon. John Quincy Adams upon weights and measures, in 1821, that a great want of uniformity in weights and measures and the methods of gauging existed at that time in the States and custom-houses.

Few of the States had passed laws regulating the gauging of casks, and the implements used were even more various than the diversified sources from which the weights and measures had been derived.

The report of Mr. Hassler, and of the Secretary of the Treasury in 1832, described the same irregularities to exist as were referred to in the report of Mr. Adams.

The direction of the Secretary of the Treasury of June 18, 1831, to Mr. Hassler to make standards for the custom-houses, was the first step towards uniformity in weights and measures; but its effect, in connection with the subject of gauging casks, was merely to fix the uniform value of the *gallon,* without correcting the discrepancies in the methods used. In fact, no act of Congress, or regulation of the Treasury Department, had defined the proper method to be followed.

In the delivery of the new hydrometers and manuals of tables to the custom-houses in 1850, the agent appointed by the Treasury Department for this purpose, Woods Baker, esq., also improved the opportunity to gather the details of the methods of gauging practised at the several ports.

In his report upon this subject, Mr. Baker remarks that "on inquiry into the different modes for estimating the capacity and contents of casks containing imported liquors, oils, molasses, &c., I found a great want of uniformity among them, the same process not being followed by the gaugers at any three custom-houses. *No allowance* is made for differences of temperature, and other irregularities are found," &c.

Upon a report of the result of this examination to the Secretary of the Treasury, authority was obtained to make the necessary investigation with a view to the establishment of a uniform system of gauging throughout the country.

As a first step in the investigation, measures were taken for obtaining all the information necessary concerning the precise methods practised at our principal ports, as well as the system followed by the official gaugers in Europe.

For this purpose, circulars were addressed to the collectors of the ports of Boston, New York, and Philadelphia, desiring them to

furnish certain detailed information in a tabular form. The returns have been received, and furnish valuable data in the investigation.

Letters were addressed to the United States representatives at London, Paris, Berlin, Brussels, and the Hague, requesting them to procure and forward the official regulations of the respective governments to which they were accredited in relation to the measurement of the capacity of the casks, together with descriptions of the processes now and formerly in use, and the instruments and tools employed by the official gaugers. In reply to this circular, the Hon. Abbott Lawrence forwarded instruments, books and regulations, presented by the chief of the British excise department; the Hon. Geo. Folsom sent instruments, with papers and instructions on gauging; papers were also received from Berlin. The correspondence upon this subject is given in Appendix No. 15.

Subsequently, (October, 1853,) letters were addresed to D. K. McRae, esq., consul at Paris, and W. H. Vesey, esq., consul at Havre, for the purpose of obtaining information of the French method of gauging; prompt and satisfactory replies were received, accompanied by books, papers, and instruments, fully illustrative of the subject of inquiry.

In procuring the requisite information in Paris, Mr. McRae was under many obligations to the Prefect of the Seine and M. Alexandre Vattemare for the facilities which their kindness and assistance afforded him.

The information and data thus collected, affording a concise view of the methods of gauging practised by the principal governments of Europe, will be of much value in arriving at a decision in regard to the most suitable method to be recommended for adoption.

Some experiments have been made to determine the weight, specific gravity, and expansion of various liquid articles of importation, such as molasses and oils, with a view to the ultimate determination of the best practicable method of gauging casks, under all the circumstances of variation of bulk, at different temperatures.

The experiments consisted in weighing the same volume of a substance at different temperatures, ranging from 32° to 76° Fahrenheit, and were made by the late Mr. Woods Baker and Mr. E. Liomin, extending from the summer of 1852 to the following winter, no artificial temperatures being resorted to. A discussion of the results having shown further inquiry to be desirable, additional experiments were made under my direction by Mr. Liomin during the summer of 1854 and the ensuing winter. All these experiments are given in Appendix No. 26, and are graphically represented on plate No. 3. An inspection of the diagrams will show that a very great degree of accuracy is attainable by the method employed, and that practical results of value have been obtained bearing directly upon the subject of gauging by weight.

10.—LAWS OF THE STATES OF THE UNION RELATING TO WEIGHTS AND MEASURES.

The legislation in regard to this subject up to 1819 is given in full and in abstract, in the learned and elaborate report made in 1821 by the Hon. John Quincy Adams, then Secretary of State. It may not

however, be out of place here to give briefly a synopsis, derived from that report, of the legal provisions in force at that time in the several States in relation to standards of weights and measures.

In *Massachusetts*, the standard weights and measures were derived from the exchequer of England; the measures were of the *Winchester* standard, and both avoirdupois and troy weights were established. The preparation of county and town standards was provided for.

In *New Hampshire* and *Vermont*, the weights were derived from the exchequer of England, and the measures were of the *Winchester* standard. No troy weights were established by law. In New Hampshire, town standards were to be provided, and in Vermont both county and town standards.

In *Rhode Island*, the weights and measures were required by law to be according to the standards of the exchequer of England, and copies were to be provided by the towns The practice of "gauging" was established by law.

In *Connecticut*, the standard bushel was to contain 2,198 cubic inches, (copy of an old English bushel, not the *Winchester*, which contains 2150.42 cubic inches,) and the gallon to contain 231 cubic inches. No troy weights were established. All gauging was to be done by "Gunter's" rule.

In *New York*, the weights and measures were to be according to the standards in the office of the Secretary of State, at the time of the Declaration of Independence, (which were themselves derived from the exchequer standards,) until Congress should provide others. Both avoirdupois and troy weights were established, and counties and cities were to provide copies of the standards.

In *New Jersey*, the standards were, by law, to be according to those of the exchequer of England, including avoirdupois and troy weights.

In *Pennsylvania*, also, the weights and measures were to be according to the exchequer standards and kept in each county. Those used, and at that time in the possession of the keeper of the weights and measures, were brought over to this country by William Penn.

In *Delaware*, the standards were to be copies of those in the exchequer of England, and the counties were required to provide copies.

In *Maryland*, the *Winchester* bushel was adopted and used. English standards were required by law to be procured for adoption. Troy weights were recognized. Each county was required to procure copies of the standards. The mayor and council of the city of Baltimore were authorized to fix the standards for that city.

In *Virginia* and *North Carolina*, the standards were to be according to the exchequer standards of England, and copies to be provided by the counties.

In *South Carolina*, the *London* standards were adopted, copies of which were to be provided by the counties.

In *Georgia*, the standards of *Savannah* and *Augusta* were declared to be those of the State. An ordinance of the city councils of Augusta prescribed *avoirdupois* weights, *wine* measure for liquids, and the *Winchester* bushel for dry measure.

In *Kentucky*, the standards of Virginia were adopted as those of the State. The governor was required to procure the standards, and

to furnish copies to the counties. The bushel was required by law to contain 2,150$\frac{2}{3}$ solid inches, and the wine gallon 231.

No standards had been established in *Tennessee.*

In *Ohio*, the law required a half bushel, to contain 1,075$\frac{2}{10}$ solid inches, to be made and kept as a standard, and copies to be procured by each county.

The law of *Lousiana* directed standards to be provided to conform to those in use by the United States revenue officers, and copies to be furnished to each parish. In *Indiana*, copies of the English standards, comprising the half bushel, to contain 1,075$\frac{1}{5}$ cubic inches, a gallon to contain 231 cu. in., and avoirdupois weights, were to be procured and distributed to the counties. This law was to remain in force until Congress should otherwise provide.

The standards established by the law of *Mississippi* were defined to be the *English avoirdupois* weights, and standard measures of length, and dry measures of capacity, and *wine* measures for liquids; copies of which were to be furnished to each county. These were to continue as the standards until Congress should fix a standard for the United States. The standards established in *Illinois* were precisely similar to those of Indiana, with the exception of the pound avoirdupois, which, in Illinois, was to contain 7,020 grains troy.

Alabama adopted the standards of Mississippi, *Missouri* established the same standards as Indiana. In the *District of Columbia*, the standards were required to be conformable to those of the State of Maryland.

It will be seen, from the above, that the weights and measures in use in all the States of the Union at that time were derived from the English. The colonists that came to this country brought with them the weights and measures of their country, but they were rather those of the law, than of any particular section or district.

The standards in the exchequer of England remained the same from the first settlement of Jamestown up to 1826, with the exception of the wine gallon, which was of the time of Queen Anne; and it was from the standards of the exchequer that all the weights and measures of the United States were derived, until Congress fixed the standard. Louisiana at first recognized standards derived from the French, but in 1814 the United States revenue standards were established by law. In Tennessee there does not appear to have been any law at the time fixing the standards, but those in use were derived from Virginia.

The actual standards in use by the several States and in the custom-houses, although thus legally derived from the English standards, were, however, ascertained and reported by Mr. Adams to be very defective, and wanting in agreement with the recognized standard, as well as in uniformity. The distribution of carefully constructed standards, made in this office, to the custom-houses, in 1836, furnished the means of uniformity in the collection of the customs; and the resolution of Congress of 1836, directing the distribution of complete sets of standards to each of the States, fixed the standard for the Union.

The beneficial results and the progress towards greater uniformity, arising from this distribution, will be apparent from a comparison of the

legal provisions in the several States at the date of Mr. Adams' report with those in force at the present time, an abstract of which is here given.

Since the distribution of these standards, most of the States have adopted them by new enactments as the standards of the States respectively, and actually distributed, or provided for the distribution of, copies to the counties, and in many instances to towns also.

Such has been the action of the following States, viz:

Maine, New Hampshire, Vermont, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Kentucky, Ohio, Illinois, Iowa, Wisconsin, Texas, California, Tennessee—24; and in the Territories of Washington and New Mexico, (26.)

Louisiana (27) has adopted the standards in use by the United States revenue officers, and provided for the distribution of copies to the parishes, but has not adopted the State standards furnished by the federal government. These are, in fact, derived, however, from the same source. Of the above States, several of them have, by their elaborate and carefully drawn acts, and the actual steps taken to distribute copies to the counties, manifested great interest in the subject. This may particularly be said of New York, Pennsylvania, Massachusetts, and Maryland.

The States of Indiana, Missouri, and Arkansas, still recognize by law the old territorial standards, which were derived from the English exchequer standards. Rhode Island also recognizes the exchequer standards.

Michigan and Minnesota Territory retain the laws adopting the standards in use in New York at the time of their passage, though the State of New York has altered her standards to conform to those of the United States.

To collect the necessary information in order to give a connected history of the legislation upon this subject, from the time at which it was left by the Hon. John Quincy Adams to the present time, it was desirable to obtain more complete copies of the laws enacted by the several States during this period than could be obtained from the libraries of the State Department and of Congress.

To obtain these copies in the reliable and authentic form desirable, circulars of the form appended (No. 11) were addressed to the governors of the several States of the Union.

Answers were received from thirteen States, and upon repeating the circular in July, 1853, replies were elicited from nearly all. In June of the present year the circulars were renewed; and also subsequent to the adoption of the Senate resolution of August 14th, calling for this report. Bound volumes of the Revised Statutes were received from the States of New Hampshire, Georgia, Alabama, Kentucky, Indiana, and Missouri, in 1853, and from Wisconsin, Mississippi, Georgia, Tennessee, and Rhode Island, within the present year. Certified copies of all the laws on weights and measures, from 1819 to 1853, were received from Massachusetts, Rhode Island, New York, Pennsylvania, Maryland, Virginia, Louisiana, Ohio, Texas, and California; and copies of laws on the subject, then *in force*, from the

States of Maine, Vermont, Connecticut, New Jersey, North Carolina, South Carolina, Michigan, Illinois, and Iowa.

The calls made by circular within the present year have been met by all the States of the Union, excepting Louisiana, and Texas; and copies were received of acts passed in Kentucky, Massachusetts, New York, New Jersey, Tennessee, South Carolina, Vermont, Mississippi, Wisconsin, Georgia, North Carolina, Missouri, Indiana, Illinois, Rhode Island, and from Minnesota, New Mexico, and Washington Territories. Official advice was received, also, that no legislation subsequent to 1853 had occurred in Connecticut, Maine, Maryland, Michigan, Ohio, New Hampshire, Virginia, Pennsylvania, Alabama, Iowa, Arkansas, Delaware, and California.

By a letter from the secretary of state of Florida, it appears that no laws on weights and measures have been passed by the legislature of the State. From Delaware, Mississippi, Tennessee, and Arkansas, no laws were received in 1853; and copies of the laws of those States, as well as the acts subsequent to 1819, of those States which only sent copies of the laws then in force, were obtained, as far as possible, from the Congressional and State Department libraries.

The information thus obtained of the legislation of the several States upon the subject of weights, measures, and gauging, during the period from 1819 to the present time, will be seen in the following abstract of laws:

MAINE.

The first law on weights and measures passed by the State of Maine, to be found on her statutes, dates its approval on the 5th of February, 1821, although the phraseology of the first section indicates a previous act.

This law is modelled upon a law of Massachusetts enacted in 1800, and, in fact, is nearly a literal copy of it. A brief account of it may, however, be given here, as it will be referred to in the account of the laws of the States of New Hampshire and Vermont, which were, with the exception of those of a recent date, likewise copied from the laws of Massachusetts.

The first section of this act of 1821, "for the due regulation of weights and measures," declares that "the brass and copper weights and measures heretofore adopted, used, and allowed as standards, be and remain the public allowed standards throughout this State," &c., and that the treasurer, at the expense of the State, provide the standards, as follows: "One bushel, one half bushel, one peck, one half peck, one *ale* quart, one *wine* gallon, one wine half gallon, one wine quart, one wine pint, and one wine gill. Said measures to be made of copper or pewter, conformable, as to contents, to said standard measures, and as to breadth, that is to say, the diameter of the bushel, not less than eighteen inches and a half, containing thirty-two *Winchester quarts;* the half bushel not less than thirteen inches and three quarters, containing sixteen *Winchester* quarts; the admeasurement to be made, in each instance, withinside the measure: also, one *ell* or *yard;* one set of brass weights to four pounds, computed at *sixteen ounces* to the *pound*, with fit scales and steel beams: also, a good

beam and scales, and a nest of *troy* weights, from one hundred and twenty-eight pounds* down to the lowest denomination," &c.; each to be stamped with its weight or its measure, and sealed by a seal to be kept by the treasurer: and, in addition, "one fifty-six pound weight, one twenty-eight, one fourteen, and one seven pound weight, made of iron."

It may be well here to remark, that, as this description of the standards is an exact copy from the law of Massachusetts passed in 1800, which also adds that said "brass and copper measures [were] *formerly sent* out of England, with certificate out of the exchequer to be approved *Winchester* measure, according to the standard in the exchequer," &c., there can be no doubt that the standards of Maine were likewise imported from England, or copied from those of Massachusetts which had the seal of the exchequer standard.

The county treasurers were required to procure and keep, for county standards, exact copies of the State standards, (with the exception of the bushel,) to be tried and sealed by the State sealer, and every ten years to be tried and sealed anew. For neglect of this duty, the county sealer to be fined.

The treasurers of towns were likewise required to procure and keep exact copies of the State standards, except the half bushel, and with the liberty to have the half bushel, peck, and half peck of wood, and to be excused from providing a nest of troy weights other than from the lowest denomination to eight ounces. Town sealers, appointed by the selectmen, were to keep the standards, and once in every year try and seal the weights and measures of the inhabitants, after giving public notice of their appointment, and the place where, and time when, they would attend for that purpose. The town standards were to be re-compared, by the State or county standards, once in every ten years. The law also specifies the fines for neglect of duty on the part of sealers, their fees for sealing, and the penalties for any citizen using weights and measures not sealed by the town or county sealers. A particular section prescribes the manner in which the weights used in *banks* should be tested and sealed.

A resolution of the legislature, passed February 6, 1822, authorizes the treasurer to delay or omit the purchase of the State standards until the next meeting of the legislature.

By "An act regulating the weight of hoops, staves, and other articles," approved February 25, 1828, the *hundred weight* of *one hundred pounds* and *ton* of *two thousand pounds* were established.

The State standards enumerated in the law of 1821 were directed to be purchased by the State treasurer, by a resolution of the legislature, approved March 22, 1831, provided that the largest troy weight should be of one hundred and twenty-eight ounces, and the two largest iron (avoirdupois) weights should be, one of fifty pounds and one of twenty-five pounds. Five hundred dollars were appropriated for this purpose.

The United States standards of weights and measures were adopted by the act approved March 2, 1839, and entitled "An act additional

* Altered to ounces by resolution approved March 22, 1831.

to an act for the due regulation of weights and measures." This declares that such standards of weights and measures as should be furnished to the State by the United States, in addition to such weights and measures as should be necessary to make complete sets, (which were to be procured by the treasurer, and to be in perfect accordance with the United States standards,) should be the standards of the State.

The State sealer of weights and measures was directed to procure a suitable gold balance, and a balance for avoirdupois weights, to be kept at the State House, for the trial of weights and measures and for no other purposes. The county sealers to procure standards at the expense of the county, and to have them compared every ten years with the State standards. The town sealers were also to procure town standards, and to have them compared with the county standards every ten years.

In July, 1841, the Revised Statutes of the State were adopted. They contained such laws on weights and measures, passed in previous years, as had not been repealed, with the addition of some sections. Chapter 73 declares that "the standard of *weights recently furnished* by the United States, and adopted by this State, shall be continued and used as the standard of weights instead of those formerly used; and the measures adopted by the United States as standard measures, *when furnished* to this State, shall be adopted and used as standard measures of this State."

In the meantime, the State sealer was to procure and preserve the following measures: "One bushel, one half bushel, one peck, one half peck, one *ale* quart, one wine gallon, one wine half gallon, one wine quart, one wine pint, one wine half pint and one wine gill," to be made of copper or pewter, conformable as to measure to the United States standards, and as to diameter, to the dimensions given in the law of 1821.

He was also required to procure the smaller denominations of weights, both avoirdupois and troy, so as to make complete sets as described in the same law. The *yard* and *ell* were preserved as length measures. All the previous laws, as regards the providing of county and town standards, their comparison, and the trying and sealing of the weights and measures of the inhabitants, were re-enacted. The following special acts, passed in previous years, were also re-enacted: Act of March 10, 1821, prescribing the quality and dimensions of casks in which *pearl ashes* were to be packed for exportation; act of same year, March 19, prescribing the form and dimensions of casks, kegs, and firkins, in which *butter* and *lard* were to be exported; act of March 22, same year, regulating the form, quality, and dimensions of casks for containing *fish* of different kinds, and the manner in which they should be salted, or pickled, and packed. For salt fish, the tierce was to contain 300 lbs., the barrel 200 lbs., the half barrel 100 lbs., quarter barrel 50 lbs., and kids (tenths of barrels) 20 lbs. For pickled fish, the tierce was to contain between forty-five and forty-six gallons, the barrel from twenty-nine to thirty gallons, and smaller kegs to be in the same proportion.

Other acts of the same year establish the measurement of coal,

wood, and bark, of lime and lime casks, of tobacco and onions, of nails, of hogshead hoops, of shingles, clapboards and staves, of flaxseed, of hair at eleven pounds, and of oats at thirty pounds, to the bushel: act of January 24, 1824, fixing the dimensions and manner in which shingles shall be sawed; of March, 1835, establishing the weight of a bushel of potatoes at sixty pounds; and of March, 1839, establishing the dimensions of boxes to contain herrings for exportation.

The Revised Statutes of 1841, of which a particular description has been given, are now in force in this State. Chapter 73, section 1, provides that the United States standard weights and measures be adopted as the State standards. The weights furnished by the act of Congress had not at that date been received. Since then, the complete set of weights and measures have been furnished to the State, with three balances, which, by the terms of the law, were to be deposited in the State House and used only as standards. The clause in a previous law declaring the *hundred weight* to be 100 lbs., the *ton* to be 2,000, the *quarter* twenty-five pounds, &c., is also re-enacted in the law of 1841.

No laws have been enacted in relation to standard weights, measures of length or capacity, or relative to gauging, in this State, since July 31, 1841.

NEW HAMPSHIRE

The law of 1797, entitled "An act regulating scale-beams, steelyards, weights, and measures," requiring the standards to be in accordance with the approved *Winchester* measures, allowed in England in the exchequer, remained in force, with some alterations, until the year 1848; one of the changes in the law was made by the "act regulating the weighing of merchandise and other commodities," approved July 6, 1827, which enacts that "all commodities which now are and usually have been sold by the one hundred and twelve pounds or one hundred weight avoirdupois shall, when exposed to sale and actually sold, be weighed by the *decimal hundreds* and pounds of avoirdupois," &c., and all weighers are directed to weigh accordingly, under pain of fines.

By an act passed December 29, 1828, in addition to the act of 1797, the contents of the basket for measuring charcoal was fixed at eighteen gallons, level measure, the average diameter not to be less than twenty inches. This law was re-enacted and approved January 1, 1849.

By a resolution of the legislature, approved December 17, 1840, it was resolved "that the set of standard weights now in the capitol, received from the Secretary of State of the United States, be deposited in the office of the treasurer of this State, who is hereby directed to receive and preserve the same."

The act of 1848, entitled "An act in amendment of chapter 110 of the Revised Statutes, relating to weights and measures," requires each county sealer, within three months after the passage of the act, to try and prove the county standards in their possession by the standards furnished to the State by the United States, and now deposited with

the treasurer. Such as were not already provided with standards were to procure them and have them tried and proved in the above manner within the three months.

The town sealers were likewise required to procure town standards and have them tried and proved by the county standards within six months, both county and town standards to be re-compared every three years.

Chapter 706 of the Revised Statutes, approved January 1, 1849, re-enacts the preceding, and provides for the appointment by the governor of county sealers; for the election by the towns of town sealers of weight and measures; and for seals to be used by each. It also prescribes the penalty for the selectmen of towns failing to provide town standards, for the neglect of duty on the part of sealers, and the penalty for using weights and measures not tried and sealed by the public sealers. The *hundred* weight was directed to be understood and weighed as *one hundred pounds*, the *ton* two thousand pounds &c.,

A subsequent chapter (1130) approved in 1851, fixes the weight of a bushel of oats at 30 lbs., a bushel of potatoes at 60 lbs., excepting special contracts, and regulates the weight and marking of loaves of bread.

Since July 2, 1851, no alterations have been made in this State in the laws concerning weights and measures.

VERMONT.

The first law of Vermont in relation to weights and measures was passed March 8, 1779, entitled "An act relating to weights and measures." It declared that the standards of the State should be "according to the *approved Winchester measures*, allowed in England in the exchequer," but omitted to include the denominations of *troy* weight. A copy of this law, which appears to have been modelled upon an old colony law of Massachusetts, passed in the year 1647, was given in the report of the Hon. John Quincy Adams, in 1821.

An amendment to this law passed in November, 1816, entitled "An act regulating and directing the measurement of charcoal, lime, and ashes," specifying that a bushel of these substances should consist of 38 quarts of *ale* or *Winchester* measure, was afterwards repealed in October, 1828.

"An act relating to weights and measures," passed November 18, 1824, prescribes the standard weight of a bushel of Indian corn and rye to be fifty-six pounds, and of oats thirty-two pounds.

In November, 1830, "An act in addition to an act relating to weights," passed March 8, 1797, "required the selectmen of the several towns to procure the additional weights of fourteen and seven pounds." Another amendment to the law of 1797, with the same title as the above, passed November 9, 1831, established *one hundred pounds* as the hundred weight in weighing all gross articles. Thus amended, the old law of 1797 continued in force until 1839, when it was re-enacted, with some changes, the most important of which was in the first section, which declared that "the public standards of weights and measures in this State shall be the *standards adopted by the gov-*

ernment of the United States."* After this section comes the whole law of 1797, with slight modifications.

As it stands, this law presents some singular incongruities. The first section adopts the United States standards, the second enumerates the different denominations which were to be procured by the treasurer of the State and preserved as standards, as follows:

One set of iron weights consisting of one fifty-six pound, one twenty-eight pound, one fourteen, one seven, one two, and one one pound weights, and a suitable scale and beam necessary for the use of the same; also, one set of brass weights, from one ounce to four pounds, at the rate of sixteen ounces to the pound; also, one half bushel, one peck, one half peck, one *ale* quart, one *wine* gallon, one two quart wine measure, one quart, one pint, one half pint, one gill, one half gill measure; *one English ell, one yard;* which shall be the standard by which all weights and measures shall be tried, proved, and sealed," &c., thus establishing *two* liquid measures, and two measures of length; whereas the United States standards recognize but *one* standard of liquid measure, the wine gallon; *one* of dry measure, the Winchester bushel; and *one* of length, the yard.

The law, moreover, does not establish *troy* weights, upon which the troy pound, the United States standard of weights, depend for their unit; and the denominations that are specified, 56, 28, 14, 7, 4, 2, and 1 pounds, correspond to the "hundred weight," of 112 pounds; whereas the concluding section declares that "*one* hundred pounds shall constitute the hundred weight," and two thousand pounds the *ton.*

It was made the duty of the treasurer of each county to provide and keep copies of the State standards, with a seal, and to prove and seal the town standards, which were to be provided by the selectmen of the towns.

The State and town standards were also to be stamped in a prescribed manner.

The law also prescribes the fines for neglect of the requirements of the law, fees for sealers of weights and measures, and penalties for using weights and measures not sealed by public sealers.

A subsequent law, in conformity with the standards furnished by the government of the United States, was enacted in 1850, and the above law, with subsequent additions, fixing the weight of a bushel of wheat at sixty pounds, of rye or Indian corn at fifty-six pounds, of barley or buckwheat at forty-six pounds, of oats at thirty-two pounds, of potatoes sixty pounds, is now in force, and the measure of apples the same as lime or ashes, remains as fixed by the law of 1842.

In 1855 it was enacted that "a pile of wood or bark four feet wide, four feet high, and eight feet long, well packed, shall constitute a cord," the length of all cord wood exposed to sale being so estimated as to include only half the kerf.

No law on the subject of weights or measures has been passed in the State since the act last mentioned.

---

* Re-enacted in 1850.

MASSACHUSETTS

The law in force in Massachusetts at the date of Mr. Adams' report on weights and measures was enacted February 26, 1800,* and was a compilation and revision of all the laws enacted previous to the Revolution, reaching back as far as the colonial law of 1647.

It declared, as formerly established by the law of 1692, "that the brass and copper measures *formerly* sent out of England, with certificate out of the exchequer to be approved Winchester measures, according to the standard in the exchequer, and which have been adopted, used, and allowed in this State, shall remain the authorized public standards, by which all weights and measures shall be tried, proved and sealed," &c.

It made it the duty of the treasurer to preserve these standards, which were to be deposited in the treasury of the Commonwealth, being as follows, viz: one bushel, one half bushel, one peck, one half peck, one ale quart, one wine gallon, one wine half gallon, one wine quart, one wine pint, one wine half pint, and one wine gill; also, one ell and one yard; also, one set of brass weights to four pounds, computed at *sixteen* ounces to the pound, with suitable scales and steel beam, and one set of iron weights consisting of one fifty-six pound weight, one twenty-eight, one fourteen, and one seven pound weight; and also a good scale and beam for *troy weights*, and a nest of troy weights from one hundred and twenty-eight ounces down to the last denomination.

It prescribes that all weights and measures which may be procured from time to time to replace the above shall be made and preserved in the same form and of the same dimensions—that is to say:

The diameter of bushel not less than.....			18½	inches,	to contain	32	Winchester	quarts.
Do.	half bushel	"	..... 13¾	"	"	16	"	"
Do.	peck	"	..... 10¾	"	"	8	"	"
Do.	half peck	"	 9	"	"	4	"	"

The measurements to be made inside the measures, and the measures to be of copper or pewter. Duplicates were to be provided for a deputy, who was to be appointed by the treasurer. Copies, with the exception of the bushel, were to be provided by the treasurer of each county, with a seal, for testing and sealing the town standards, and the treasurer of each town to provide, at the expense of the town, similar copies, with the exception of the bushel and the troy weights, other than from the lowest denomination to 8 ounces, with liberty to make the dry measures of wood, instead of pewter or copper.

The county standards were to be re-compared with the State standards once in every *ten years;* the town standards with the county every ten years likewise, and the weights and measures of the inhabitants† to be tried and proved by a public sealer of weights and measures once in every year.

In the year 1847, having received the weights and measures and balances from the federal government, the legislature enacted that, "the several avoirdupois and troy weights and balances procured from the government of the United States for this Commonwealth, by the commissioners appointed for that purpose in the year one thousand

* Revised Statutes of November, 1835.

† Excepting those used in Boston.

eight hundred and thirty-five, and also all weights, measures and balances that have since been received from the said government for the purpose of being used as standards, shall hereafter be used as the sole authorized public standards of weights and measures of this Commonwealth, and shall be in the care and custody of the treasurer of this Commonwealth." The full set of weights, measures and balances for the State were then enumerated, with a description of the seal to be used by the treasurer in sealing county standards, or by a deputy to be appointed by him, for whose use the treasurer was to procure exact duplicates of the State standards.

The treasurer of each county and of each town was required to keep, at the expense of the county, town or city, a complete set of the aforesaid weights, measures and balances, except the troy weights; the weights of four pounds and under to be made of brass; the others might be made of iron—all to be turned and finished; the liquid measures to be made of brass or iron of durable thickness, to be turned on the inside and on the top edge or rim; the balances to be made of brass, steel or iron, and in all cases the edges and bearings to be made of hardened steel or agate; said weights and measures to be sealed by the State or county sealer; the county standards to be recompared with the State standards at least once in every ten years; the town standards with those of the county once in *every five years*; and both county and town treasurers to keep seals with which to seal the weights and measures of the towns, of public sealers, and of the inhabitants.

The sealers of weights and measures were, every year, after giving public notice of the time and place at which they would attend for the purpose, to try and prove the weights and measures of the inhabitants; the fees for which, as well as the penalties for the use of any weights and measures not thus sealed, are specified.

The hundred weight was declared to be understood to mean the net weight of *one hundred pounds* avoirdupois, and contracts were to be construed accordingly.*

By a resolution of the legislature, approved April 20, 1847, the weights, measures and balances received from the United States were to be removed from Harvard University to the State House in Boston. The treasurer was also authorized to procure two sets of *dry measures* of the following dimensions, being aliquot parts of the half bushel, viz: "two of eight quarts, two of four quarts, two of two quarts, and two of one quart; one set to complete the standard of the Commonwealth, and the other as a duplicate for the use of the deputy State sealer."

An act of 1852 prescribes that the measures of charcoal shall be cylindrical, and of the following dimensions: eighteen inches diameter at bottom, twenty inches at top, and nineteen inches in perpendicular height, which measure shall be of the capacity of two bushels, and shall be filled *level full*.

In 1853, however, this was amended so as to make the dimensions of the charcoal basket nineteen inches in diameter in every part, and eighteen and one-tenth inches in depth.

---

* Chapter 30, sec. 25, Revised Statutes of 1835.

The law of 1847, thus amended, remained in force in 1853.

An act approved April 14, 1855, fixes the weight of a ton of anthracite, bituminous or mineral coal at two thousand pounds avoirdupois, "the seller thereof to cause the same to be weighed by a sworn weigher of the town." A certificate, signed by the weigher, must be given at the time of the delivery.

It was enacted, April 26, in the same year, that the bushel of wheat shall be sixty pounds, of corn or rye fifty-six pounds, of oats thirty-two pounds, of barley or buckwheat forty-eight pounds, and of ground corn or ground rye fifty pounds; that contracts shall be made only for delivery by the bushel, and that a certificate shall be given of the number of bushels, as ascertained by weight, signed by the town measurer of grain.

The last act passed in this State, and approved June 4, 1856, fixes the legal weight of a bushel of onions at fifty-two pounds.

RHODE ISLAND.

In the code of laws of 1647 it was enacted that "the measure shall be one and the weight one throughout the whole colony, and that every town shall have a common balance and weights, and a common measure, that every person may measure and weigh thereat," and that every town shall be careful in the observance of the law in this respect. The penalties for any person whatsoever using false weights and measures that are not according *to the standard* are prescribed. The standards referred to were those established by the statutes of England, or rather the *exchequer standards*.

It does not, however, appear that any standards were actually procured until 1663; for by an act of March 1, of that year, it was enacted that a "general sealer of weights and measures" should be annually chosen, who should procure, at the expense of the colony, a half bushel, a peck, half peck, *ale quart*, *wine quart*, wine pint, wine half pint, a yard, and weights, which should be "according to the *standard of his Majesty's exchequer* in the kingdom of England."

The towns were also required to procure suitable standards.

By an act passed May, 1698, penalties were prescribed for such towns as failed to procure standards and to have them sealed by the general sealer.

In February, 1728, the act of 1663 was substantially re-enacted.

By an act of June, 1731, the assize of barrels was fixed at thirty-one and a half gallons.

The "digest" of 1767 contains an act fixing the measure of firewood the same as at present.

By act of June, 1751, re-enacted in 1767, the subject of gauging was regulated. It was directed to be done by "Gunter's rule," and the act of 1767 established the rule for finding the mean diameter "by multiplying the difference between the head and bung diameters, by 0.65, and adding the product to the head diameter, or, which is the same, otherwise expressed, by adding six-tenths and a half of the difference between the diameter at bung and head to the diameter at the head."

By act of October, 1784, the weight of Indian meal which should

be sold for a bushel, and which had previously been 50 pounds, was fixed at 54 pounds. This was re-enacted in 1798.

The above act regulating gauging was further explained by an act passed January, 1820, which enacts that in measuring the head and bung diameters, the measure shall be taken both in a horizontal and vertical direction, and the mean of the two measures taken as the true diameter of the heads. The act of 1767, as thus amended, was re-enacted in 1822.

The legal dimensions of a cord of wood and of baskets for measuring charcoal were established by an act passed in the same year; and the weight of a bushel of rye meal was established at 50 pounds. In October, 1823, the weight of a bushel of potatoes was fixed at 64 pounds.

By an act passed June, 1825, substituting net for gross weight in sales, and contracts relating to articles of merchandise, an important change was made in this respect, by establishing 100 pounds as the *hundred weight*, and 2,000 pounds as the *ton*. This act was amended by an act in addition to it, passed January, 1830, fixing a penalty of ten dollars for every violation of its provisions.

An act passed October, 1830, fixed a penalty for selling charcoal in any other than the kind of baskets specified by the act of 1822*. By an act passed October, 1836, the weight of a bushel of Indian meal was fixed at 50 pounds; and by acts of January, 1838, a bushel of potatoes was fixed at 60 pounds, and of onions at 50 pounds.

The "digest" of 1844 contains, in a connected form, such of the above mentioned laws as were still in force.

In June, 1847, a new gauging act was passed, entitled "An act in relation to gauging, and for the appointment of gaugers," which specifies that all casks shall be gauged by "Gunter's rule," computing the *gallon at* 231 *cubic inches;* and that the mean diameter of casks be found according to the principles laid down in "Daniel Anthony's work on gauging, published in Providence, A. D. 1817." The law also specifies the manner of appointing gaugers, their fees, and the penalties for non-compliance with the provisions of the law.

No copy of laws adopting the standard weights and measures of the United States has been sent for the files of this office, although the State, several years since, was furnished with reliable and carefully prepared copies of the government standards. The standards imported from England, after being sealed at the exchequer, have been, and it is presumed now are, the legal standards of the State.

The gauging law of 1847 fixes the *gallon* at 231 *cubic inches*, which in general terms is the standard gallon of the United States, but no definition is made of the unit of length or of weight.

In January, 1852, it was enacted that the city council of Providence should appoint weighers of cotton, and that all cotton sold throughout the State should be first weighed by the agents so appointed. This is the last act of legislation, except the adoption of a resolution providing means for the deposit in a room in Brown University of the standards received from the general government.

* Nineteen inches in diameter, and seventeen and a half in depth; the measure to be well heaped.

CONNECTICUT.

"An act relating to weights and measures," passed in 1827, was modelled upon a former law passed in October, 1800, and contains the following provisions:

"That there shall be kept at the treasurer's office, to be in the custody and under the care of the treasurer for the time being, the following measures and weights—that is to say: a half-bushel brass measure of the capacity of *one thousand and ninety-nine* cubic inches; also a brass peck measure of one-half of the said capacity, and a brass half-peck measure of one-quarter of said capacity, to be called by these names respectively, which shall be the standard of *corn measure;* also a brass vessel of the capacity of 231 cubic inches, which shall be the standard *ale* or *beer measure;* also a brass or iron rod or plate of one yard in length, divided into three parts, one foot in length, and one of these parts subdivided into twelve equal parts for inches, which shall be the standard of those measures respectively; and, also, brass weights of one, two, four, seven, fourteen, twenty-eight, and fifty-six pounds, which shall be the standards of avoirdupois weights."

The bushel thus established as standard would contain 2,198 cubic inches, and was entirely different from the *Winchester* bushel, containing 2,150.42 cubic inches, and, in fact, different from any standard bushel in the English exchequer.

It was, therefore, not derived from the standards of Massachusetts, as her standard bushel was the *Winchester*, which was also the standard of New Hampshire and Vermont.

The *gallon* established as *ale* or *beer* measure is the standard *wine* gallon derived from the exchequer of England.

In the enumeration of the town standards to be provided by the selectmen of the several towns, is given, in addition to the above standards, measures of the following dimensions for corn: "a two-quart measure, the bottom of which, on the inside, is four inches wide on two opposite sides, and four and a half on the two other sides, and its height from thence seven inches and sixty-three hundredths of an inch; a quart measure, which is three inches square from the bottom to the top throughout, and its height seven inches and sixty-three hundredths of an inch; a pint measure, the capacity of which is, from bottom to top, three inches square throughout, and its height three inches and eighty-two hundredths of an inch."

By these dimensions the two quarts would contain 137.34 cubic inches, the quart 68.67 cubic inches, and the pint 34.38 cubic inches, which are aliquot parts of the half bushel of 1,099 cubic inches.

Upon the receipt of the weights and measures from the United States, the legislature passed an act in May, 1850,* adopting them as the standard weights and measures of the State, and directing them to be kept in the treasury, under the care of the treasurer, who was to try the weights and measures of the counties when presented to him for that purpose, and, if found true, to seal them with the letters "S. C.," (State of Connecticut.)†

Every county treasurer was to provide county standards, "corre-

* Title LVIII, Revised Statutes. † Act of 1827.

sponding to all the aforesaid standards and of like material," with which he was to try the weights and measures of the towns, and, if true, seal them with a prescribed seal. The selectmen of each town were likewise required to procure and keep, as town standards, weights and measures conformable to the State and county standards, made "of good and sufficient materials," the standards for liquid measures to be of "copper, brass, or pewter;" and to procure, in addition to the half bushel, "a two-quart, quart and pint corn measures," "of the same proportionate dimensions and capacity as those furnished by Congress," meaning the United States half bushel. The town standards to be in the custody of the sealer of weights and measures, who was to be responsible for their safe-keeping, and to try, in the month of April of every year, all weights, measures, or steelyards, used by any person in the town, and if found true to seal them with his official seal, and if faulty to destroy them.

The law prescribes penalties for the failure of the county treasurers and selectmen to comply with its requirements, for neglect on the part of the sealers of weights and measures, and for any citizen using weights, measures, or steelyards, not thus tried and sealed.

It requires the town standards to be compared with the county, and the latter with the State, but does not prescribe the intervals of time at which the comparisons must be made.

The hundred weight was declared to be understood, in the sale of articles by avoirdupois weight, one *hundred pounds*, and the *ton* two thousand pounds.

"In the sale of charcoal, fruits, vegetables, shell-fish, and all other articles sold in heaped measure, 1,282 cubic inches shall constitute a half bushel."

This is the same capacity for the charcoal bushel as that established in Massachusetts by the laws of 1835 and 1853, viz: 2,564 cubic inches.

By "An act in addition to an act concerning weights and measures," approved June 22, 1850, the weight of a bushel of different kinds of grain was established as follows:

Indian corn, rye, and wheat.....	56 lbs.	avoirdupois	one bushel.
Buckwheat.....	45	do.	do.
Oats.....	28	do.	do.
Irish potatoes.....	60	do.	do.

No acts concerning weights and measures have been passed by the legislature of this State since 1850.

NEW YORK.

The act passed by the legislature of this State, March 19, 1813, entitled "An act to regulate weights and measures," remained in force with no considerable modifications until 1851, at which time the standard weights and measures of the United States were adopted as those of the State.

This law of 1813 declares "that there shall be one just beam, one certain weight and measure for distance and capacity—that is to say,

avoirdupois and troy weights, bushels, half bushels, pecks, half pecks, and quarts and gallons, half gallons, quarts, pints, and gills, and one certain rod for long measure, according to the standard in use in this State on the day of the Declaration of the Independence thereof; and that the standard of weights and measures now in the office of the secretary of this State, *which is according to the standard of the court of exchequer in that part of Great Britain called England*, shall be, and is hereby, declared to be and remain the standard for ascertaining all beams, weights, and measures throughout this State until the Congress of the United States shall establish the standard of weights and measures for the United States."

"An act authorizing the election of measurers in the counties of Queens, Kings, and Richmond," passed February 9, 1821, is local in its character, as are also the six following, viz:

"An act respecting the sealers and inspectors of weights and measures in the city of New York, March 27, 1821."

"An act for the payment of the officers of government therein mentioned," passed April 3, 1821.

"An act directing certain counties to be supplied with standard brass yard measures," passed March 22, 1822.

"An act respecting measures in the counties of Essex and Clinton," passed April 5, 1822.

"An act to authorize the appointment of a weigher at the quarantine ground on Staten Island," passed March 26, 1826.

"An act to provide for the purchase of standard weights and measures for the assistant State sealer in the city of Albany," passed April 18, 1826.

In the Revised Statutes of the State is "An act concerning the territorial limits and divisions, the civil polity, and the internal administration of this State," passed December 3, 1827, the nineteenth chapter of which is of the computation of time, of weights and measures, and the money of account." The second title of this chapter, viz: "of weights and measures," declares that there shall be but one standard of measure of length and surface, one of weight, and one measure of capacity, throughout the State; and that the standard of length and surface shall be the "yard as used in this State on the *fourth day of July*, 1776."

It defines this yard in order that it may be recovered, in case of loss, to have been formed from experiments made with a pendulum with a brass rod at Columbia College, in the city of New York, in the latitude of forty degrees, forty-two minutes and forty-three seconds, to bear to the pendulum of that place vibrating seconds in a vacuum at the temperature of melting ice, the proportion of one million to one million eighty-six thousand one hundred and forty-one, (1,000,000 to 1,086,141.) "The standard yard thus defined shall be measured in a straight line between two points" engraved upon golden disks inserted into a straight brass rod, &c., enumerating its division into feet and inches.

This standard yard was imported from England, (having been engraved and sealed at the exchequer,) by the corporation of the city of New York, in 1803, and afterwards presented to the State, and de-

posited with authentic public documents in the office of the secretary of state.

The law directs the subdivisions of the yard into feet and inches and halves and quarters, and establishes its multiples rods, furlongs, miles, and acres.

The *unit* of *weight* was defined to be the pound, of such magnitude that the weight of a cubic foot of distilled water, at its maximum density, weighed in a vacuum, with brass weights, shall be equal to sixty-two and a half such pounds.

It was to be made of brass, its equal subdivisions to be sixteen ounces.

The standard of liquid measures to be the *gallon*, to be made of brass, and to contain at the mean pressure of the atmosphere at the level of the sea *ten pounds* of distilled water at its maximum density, to be subdivided by the number *two* into half gallons, quarts, pints, half pints, and gills, and multiplied by the same number, to form the peck, half bushel, and *bushel;* the latter of which would, as the law declared it should, contain *eighty pounds* of distilled water at its maximum density.

All commodities to be sold by the heaped measure were to be measured by this bushel or its parts. The vessel to be "made round, with a plain and even bottom, and to be of the following diameters: at top, measured from *outside to outside*, the bushel nineteen and a half inches, the half bushel fifteen and a half inches, and the peck twelve and a third inches."

It does not specify the *thickness* of the above measures; therefore the above dimensions, measured from *outside*, to *outside* are indefinite in a legal point of view, although in fact the measures, being derived from the actual standards which had been deposited in the office of the secretary of state, were undoubtedly of uniform size.

This law was derived from the law which went into force in Great Britain in 1825, establishing what are denominated the "imperial standards" of that country.

It contains the same units of measure as established by that law, and in most instances the identical wording, even including the somewhat vague definition of the *bushel*. The "imperial yard," defined as the standard of length, was the same previously established in 1760, in England, and on which the distance was measured between the centres of the two points of the gold studs near each extremity.

The "imperial gallon" contained *ten pounds* of distilled water at its maximum density, and had a capacity of 276.48 cubic inches.

The "imperial bushel" was to contain eight gallons, or eighty pounds of distilled water, and be of the capacity of 2211.84 cubic inches.

That part of this law which specified the one standard for liquid and dry measures was repealed by "An act concerning standard measures of capacity," passed April 29, 1829, which declares that "there shall continue to be *two kinds of gallons*, one for the measure of *all liquids*, and one for the measure of *all other substances* not measured by heap measure," &c.

The gallon for liquids was to contain eight pounds of distilled water

at its maximum density at the mean pressure of the atmosphere at the level of the sea.

The gallon for dry measure to contain, under the same circumstances, *ten pounds* of distilled water. Both vessels to be made of brass, and in case of loss to be replaced by the above proportion.

By this law the *liquid gallon* would contain 221.184 cubic inches, or about ten cubic inches less than the wine gallon of 231 cubic inches, made in Queen Anne's reign, in 1705, and at present the standard gallon of the United States.

A list of several local laws passed at different periods by the legislature relating to the regulations of weights and measures in particular towns and counties will be found in the Appendix No. 12. In May, 1836, "An act to regulate the selling of grain" fixed the *weight* of a *bushel* of *wheat* at 60 *pounds*, of *rye* or *Indian corn* at 56 *pounds*, of *barley* at 48 *pounds*, and of *oats at* 32 *pounds*

On the 13th of April, 1843, the building in the city of Albany in which were kept the copies of the State standards issued by the assistant State sealer was burned, and these copies injured or destroyed.

An act of March 25, 1844, directs them to be replaced, provided the cost did not exceed the sum of $150.

On the 11th of April, 1851, an important act was passed adopting the United States standard weights and measures as the standards of the State of New York.

The act is entitled "An act in relation to weight and measures." The first section enacts that "the standard weights and measures now in charge of the secretary of state, being the same that were furnished to this State by the government of the United States, in accordance with a joint resolution of Congress, approved June 14, 1836, and consisting of one standard yard measure, one set of standard weights, comprising one troy pound, and nine avoirdupois weights of one, two, three, four, five, ten, twenty, twenty-five, and fifty pounds, respectively; one set of standard troy ounce weights divided decimally from ten ounces to the one-ten-thousandth of an ounce; one set of standard liquid capacity measures, consisting of one wine gallon of two hundred and thirty-one cubic inches, one half gallon, one quart, one pint, and one half pint measure, and one standard half bushel, containing one thousand and seventy-five cubic inches and twenty-one-hundredths of a cubic inch, according to the inch hereby adopted as standard, shall be the standards of weights and measures throughout this State."

The "standard yard" was directed to be divided into feet and inches, for the measure of cloth, &c., also into halves, quarters, eighths, and sixteenths. The unit or standard of weight was defined to be "the standard *avoirdupois* and troy weights," &c., their proportion to each other of 7,000 to 5,760 being enumerated.

The barrel was to consist of thirty-one and a half gallons, and two barrels to constitute a hogshead. The standard for dry measure, the half bushel, was to be divided by two to form the peck, half peck, quarter peck, quart and pint measures.

The measures to be made cylindrical, with plain and even bottom, and to be of the following diameters: "from outside to *outside* the bushel, nineteen and a half inches, half bushel fifteen and a half inches,

and the peck twelve and a third inches." The bushel of wheat was to consist of *sixty pounds*, of *rye* or *Indian corn fifty-six pounds*, of *barley forty-eight*, and of oats thirty-two pounds

The foregoing standards were to be in the custody of a superintendent of weights and measures, to be chosen by the governor, lieutenant governor, and secretary of state. He was to have copies made of the original standards with which to try the county standards, the originals themselves only to be used to try these copies or for scientific purposes, and to be *deposited in a fire-proof building belonging to the State*, from which they were in no case to be removed.

In thus providing for the safety of the elaborate standards furnished by the government, New York, in common with a few of the other States, has shown an appreciation of their value which should recommend a similar action on the part of the remaining States.

The State superintendent was to provide standards, balances, &c., for the cities and counties, and as often as *once in every ten years* compare them with those in his possession.

The county sealers were to provide the towns with standard weights, measures and balances, and compare them with the county standards as often as *once in every five years.*

The duty of the town sealers was to see that the weights and measures used in the towns agreed with the standards in their possession. The law further specifies the duties, fees and penalties for using weights and measures not conforming to the standards.

This is the law now in force in the State of New York, fully adopting the United States standards, providing for furnishing the counties with copies and extending the decimal division of the unit of weight to constitute one hundred pounds as the *hundred weight*, and two thousand pounds as the *ton.*

The most recent act passed by the legislature (April 15, 1854) authorizes the State superintendent of weights and measures to contract for the manufacture of standards for the several counties not yet supplied.

NEW JERSEY.

Up to the date of Mr. Adams' report, as appears from a letter of Governor Williamson, contained in the appendix to that report, no laws had been passed by the legislature of the *State* of New Jersey, regulating weights and measures, although the standards which were tolerated by custom were the same as those in the exchequer of England, as ordained by an old *colony* law of 13th of August, 1725. It appears that no law was enacted by the State up to 1844, as the first act to be found bears date of March 13th of that year. The act is entitled "An act to establish a uniform standard of weights and measures in this State." It enacts "that the standard of weights and measures of the United States, now deposited in the secretary's office, at Trenton, shall be the standard of weights and measures of this State, for the approving and sealing of the same in the several counties thereof; and the said secretary of state is hereby enjoined to preserve and

take care of the same," &c. It was made the duty of the secretary to try the county standards, and, when true, to give his certificate to that effect, and seal the standards with the imprinted letters "S. S.," (State standards.) It directed the "chosen freeholders of each and every county" to provide county standards within ten months after the passage of the act, of the following denominations: of weights, from half an ounce to fifty pounds avoirdupois; of measures, from one pint to one gallon, and from one quarter of a peck to half a bushel, and a yard stick; all to be tried and sealed by the secretary of state; also to provide a seal to imprint the letters C. S., (county standards.) The above standards and seal were to be in the custody of the county clerk, who was to be county sealer of weights and measures, and to take an oath or affirmation of a prescribed form for the faithful performance of his duties. He was required, on the first day of the following March, and on the same day every seventh year thereafter, to give public notice in newspapers, &c., at least thirty days previous to the time, when he would attend for the purpose of trying and sealing the weights and measures in use by the inhabitants.

The fees of the sealer are prescribed; also the penalty for any use of weights and measures not thus tried and sealed.

It does not appear that the county standards directed by this law to be prepared for each of the counties were actually provided; for, an act entitled "An act to establish a uniform standard of weights and measures in this State," approved April 17, 1846, which re-enacts the whole of the previous law, with an additional clause, specially directs that the county standards shall be provided by the 20th of March, 1847.

The additional clause defines the denominations of avoirdupois weights, as follows:

"Sixteen drachms.....one ounce;
"Sixteen ounces..... .....one pound;
"Twenty-five pounds.....one quarter;
"Four quarters.....one hundred;
"Twenty-hundred. .....one ton;

except such as may be used in the weight of *coins* and *apothecaries'* drugs."

The bushel was to contain of wheat, sixty pounds; of rye or Indian corn, fifty-six pounds; of buckwheat, fifty pounds; of barley, forty-eight pounds; of oats, thirty pounds; of flaxseed, fifty-five pounds; and of clover-seed, sixty-four pounds. An act of 1855 (Pamphlet Laws, p. 288) fixes the bushel of potatoes in weight at sixty pounds. No law relative to weights or measures has since been passed by the legislature.

PENNSYLVANIA.

The law in force in this State in 1821, dated as far back as the year 1700, ordained that "brass standards of weights and measures, according to the standards for the exchequer, should be obtained and

kept for the county," and "that a brass half bushel, then in Philadelphia, and a bushel and peck proportionable, and all lesser measures and weights coming from England, being duly sealed in London, or other measures agreeable therewith, shall be accounted good till the standard should be obtained."

By "An act establishing a standard weight for grain and foreign salt," passed March 10, 1818, the weight of a bushel of those substances was established as follows:

A bushel of	Wheat shall consist of		60 lbs.	avoirdupois.
"	Rye or corn	"	58	"
"	Barley	"	47	"
"	Buckwheat	"	48	"
"	Oats	"	32	"
"	Coarse salt	"	80	"
"	Ground salt	"	70	"
"	Fine salt	"	62	"

It was not, however, intended to prevent any one from selling or buying by measure, if they chose.

Such portion of the foregoing as relates to rye and Indian corn was amended by "An act to regulate the standard weight of Indian corn," passed April 16, 1845, which fixed the weight of a bushel at 56 lbs.

By "An act to regulate the standard weight of charcoal," passed January 22, 1847, the standard measure was established at 2,571 cubic inches for each bushel. (The charcoal bushel of Massachusetts and Connecticut is 2,564 cubic inches.)

Several acts of a local nature were passed in the years 1822, 1825, 1827, and 1830.

On April 15, 1834, was passed "An act to fix the standards and denominations of measures and weights in the Commonwealth of Pennsylvania," drawn with much care and attention to details.*

It declares that the standard unit of length "shall be the 'yard,' to conform to that in use in this Commwealth at the date of the Declaration of Independence," and that it shall be the duty of the Governor to procure "a standard yard to constitute the positive standard of length in this Commonwealth, said standard to be equal in length at the temperature of melting ice to the distance between the eleventh and forty-seventh inches on a certain brass scale of eighty-two inches in length, procured for the survey of the coast of the United States."

The standard of liquid measure to be the *gallon*, to contain 231 cubic inches of the aforesaid standard, and no more.

The standard of dry measure to be the *bushel*, to contain 2,150.42 cubic inches; both measures to be made of cast brass.

The standard of weight to be the *pound*, "equal to the troy pound of the mint of the United States;" and the avoirdupois pound of this

* It was derived from the report made in 1834, by a committee of the managers of the Franklin Institute on the subject of a law for regulating the weights and measures of the Commonwealth, referred to the managers for the purpose of investigation by a resolution of the House of Representatives, April 5, 1833. The draught of a bill, as reported by the committee, was adopted by the legislature and became a law under the above title.

Commonwealth shall be greater than the troy pound in the proportion of 7,000 to 5,760.

It was made the duty of the governor to procure, within three years from the passage of the act, the above positive standards of length, weight, and capacity, and within ten years, "or when he shall deem it expedient," to have tested the conformity of said positive standards of measure and weight to the foregoing provisions of this act, or *to the natural invariable standards*, and to deposit in the office of the secretary of the Commonwealth the authentic certificates of such reference, with the apparatus by which it was made. The "length of the standard yard was to be compared with that of vibrating seconds, at a certain and defined spot in Independence Square," &c.; "the standard of weight to be compared with that of 100 cubic inches of water at its maximum density," &c.

The governor was also, within three years after the passage of the act, to provide county standards for each of the counties at their expense, to be made of like material with the State standards, and to be delivered to the county commissioners, who were, at least once in every ten years, to try and prove them by the State standards, and to use them for the adjustment of weights and measures, and for no other purpose.

The denominations of linear, superficial, dry, and liquid measures are enumerated; those for liquid measures are as follows:

Four gills	make one	pint.
Two pints	"	quart.
Four quarts	"	gallon.
Thirty-one and a half gallons	make one	barrel.
Two barrels	"	hogshead.
Two hogsheads	"	pipe.
Two pipes	"	tun.

An act "to provide for the ordinary expenses of government, and for other purposes," passed September 29, 1843, authorizes the secretary of the Commonwealth to provide suitable cases for the weights and measures in his office, and to publish the terms upon which standards of approved construction, carefully compared with the State standards, should be furnished to the commissioners of the counties in accordance with the above law of April 15, 1834.

By "An act authorizing the secretary of the Commonwealth to distribute copies of the standard weights and measures, and for the appointment of sealers," passed April 15, 1845, it is directed that the standard weights and measures received from the government of the United States, and those in the office of the secretary of the Commonwealth, should remain in the cases provided for them, which should only be opened for the purpose of comparing the county standards, by the secretary, or by a joint resolution of both houses of the legislature, or on a call of either house, or by the governor, for scientific purposes. Copies of these original standards, to be made of such materials as the governor or secretary should direct, were to be transmitted, upon application therefor, to the commissioners of the several counties, at the expense of the counties, after being stamped

with the letters "Pa.," and such additional device as should be suitable for each county. These copies to be re-compared with the State standards every five years or oftener.

The governor was authorized to appoint sealers of weights and measures for such counties as apply for and obtain copies of the standards, whose duty should be to try all weights, measures, scales, beams, &c., used by the inhabitants of such city or county, and, if found true, to seal them. The law prescribes the fees of the sealers, and penalties for using weights, measures, or scales and beams, not sealed by a public sealer, and by a supplementary act of April 21, 1846, the penalty for altering such after they have been sealed; one-moiety of the forfeiture to be for the use of the poor.

By "An act to provide for the establishment of true meridian lines, and of standard measure for surveyors' chains, and to regulate the practice of surveyors in the Commonwealth," passed April 26, 1850, it is provided that in every county there shall be established, upon some inalienable public property, a true meridian line, and a "four pole chain" measure, (22 yards,) by which every surveyor in each county was required, in the month of April in every year, to adjust his compass and surveying chains, so that upon all returns of surveys the true and not the magnetic bearing should be given.

Some subsequent laws of a local character have been enacted, but the above law of April 15, 1845, adopting the United States standards as the standards of the State, remains in force, as supplementary to the act of April 15, 1834, fixing the denominations of the weights and of the measures.

No general laws in reference to the subject of weights and measures have been passed since April 26, 1850.

DELAWARE.

"An act fixing the standard of weights and measures, and regulating the same within this State," passed February 18, 1837, enacts that Samuel M. Harrington and John R. Bostic be appointed commissioners to procure, at the expense of the State, three complete sets of weights and measures, to be in exact conformity with those established by law or regulation of Congress, or to those which might be delivered to the governor of the State, in conformity to the resolution of Congress, of June 14, 1836.

The weights and measures to be made of such metallic or other substances as to them should appear most suitable. These sets, when procured, were to be delivered to, and deposited for safe-keeping in, the offices of the prothonotaries of the three counties of the State—one set to each county—and to constitute the duplicate standards of the State, by which the weights and measures in use by the citizens were to be tried and sealed.

The United States standards, when delivered, were to be deposited in the office of the secretary of state, who was to see that the above county standards corresponded with them. County commissioners for each county were to be appointed by the governor, whose duty it

was to go through the county, once in every two years, and examine all the weights and measures in use, and try them according to the county standards; for which purpose, the commissioners were to have free access to the standards deposited in the office of the prothonotary of the county; if found true, he was to stamp them with a seal, to be provided for the purpose; but if not in conformity to the standard, to seize and retain such weights or measures. Once in every five years, each county commissioner was to compare the county standards with those in the office of the secretary of state. The act prescribes a heavy fine for using weights or measures not tried and sealed by the State or county commissioners; the fees for sealing were to be established by the levy court of each county.

A supplement to the above act, passed February 14, 1845, authorizes the commissioners appointed to procure standards for each of the three counties to make them of any *form* that might seem to them most suitable, conforming only in the weight or measure of the standard, to those established by Congress.

They were also authorized to procure such scales or balances as might be necessary, to be deposited in the office of the secretary of state.

Another supplement to the act of 1837, passed February 27, 1849, enacts that "the standard weights and measures of the United States, now deposited in the office of the secretary of state, shall be, and the same are hereby, established and declared to be the true and legal standards of such weights and measures within this State; and the three several sets of weights and measures which have been deposited in the respective offices of the prothonotaries of the several counties, under the provisions of the act to which this is a supplement, shall be, and the same are hereby, established and declared to be true duplicate standards of such weights and measures, by which said duplicate standards all weights and measures used within this State shall be tried, tested, proved, and sealed or stamped, in the manner hereinafter provided." Each county commissioner, to be appointed by the governor for a definite term, was required to take an oath of a prescribed form, and to give bond for the faithful performance of his duty. Once in every two years, in the month of September, each commissioner was to appoint a time, in each hundred of the county, when he would attend for the purpose of testing the weights and measures in use. At least twenty days' public notice of this appointment was to be given.

The act defines the fees to be received by the commissioners for sealing, and the penalties for any use of weights or measures not thus tried and proved; it makes the secretary of state responsible for the safe-keeping of the originals in his office, and directs him to compare the county standards with them on the 1st of May, 1852, and on the same day every five years thereafter. The prothonotary of each county was to be responsible for the preservation of the county standards, and to allow the commissioner free access to them.

Chapter 66, "of weights and measures," of the "Revised Code" of Delaware, adopted in February, 1852, re-enacts the law of 1837,

as thus amended by the above supplementary acts, with some modifications.

The title of "regulator of weights and measures" is given to the commissioner appointed by the governor for each county; and instead of fees for sealing weights and measures, each regulator is to receive a fixed salary, to be paid by the county; he is also made responsible for the safe-keeping of the county standards; and is also required to attend for inspecting weights and measures, in September or October, after due public notice, in three of the most public places in each hundred, instead of five in each hundred, as established by the former law.

The weight of a bushel of wheat is fixed at sixty pounds avoirdupois, and corn at fifty-six pounds.

No law since that of 1852 has been enacted in the State.

MARYLAND.

The whole history of the laws of Maryland upon weights and measures, including the detailed laws relating to particular sections and towns, is given in the valuable report of J. H. Alexander, esq., upon the weights and measures of Maryland, and the construction of the yard measures, made in 1845. Their history, up to 1817, is also given in the Hon. John Quincy Adams' report of 1821. It will, therefore, only be necessary to refer to the more important acts passed since 1821, the titles of the laws being given in the Appendix, (No. 12.)

Until the year 1825, the law of 1671, "for providing a standard with *English weights and measures* in the several and respective counties within this province," which had been renewed from time to time, and continued under different titles, remained in force. The standards from the exchequer, and particularly the *Winchester bushel*, were the standards of the State.

On the 8th of March, 1826, was passed "An act for regulating and inspecting weights and measures used in this State," which enacts:*

1st. That on or before the first of August, 1826, the governor and council should furnish the levy court of each county with a standard of each of the several kinds of weights and measures used at the custom-house in Baltimore.

2d. That the levy court, on or before the first of May in every year, shall appoint a keeper of the standards as furnished, taking a bond in the penalty of 500 dollars for malfeasance or damage to the standards.

3d. That the standard keeper shall, once a year, inspect, and stamp or brand with the letters M. S., (Maryland standard,) in the most effectual manner, all weights and measures used in the vending of articles within this State; the employment of weights and measures otherwise shall be under a penalty not exceeding twenty dollars.

The same penalty was imposed for using condemned weights and measures or scale-beams not inspected.

6th. That the keepers of the standards attend, at least once a year, at the different markets, towns, or villages of their county, and at the

* Report of J. H. Alexander, esq., upon weights and measures, in 1825, to the governor of Maryland.

public inspection warehouses at least twice a year, after giving public notice; they shall inspect and adjust all beams, weights, and measures, and shall enter such adjustment in a register, with the names of the parties, to be submitted to the levy court.

The law specifies the fines and penalties for refusing or neglecting to have weights and measures tried and sealed. The compensation of the keepers was to be such as the levy court should allow, and was probably intended to be a stated salary for each county, as in Delaware.

In March, 1828, passed "An act to regulate the gauging of casks, and the inspection of domestic distilled liquors in this State."

"It prescribes, among other things, that the gaugers to be appointed under it 'shall conform to the present Baltimore standard of wine measure,' using correct gauging instruments and Dycas' hydrometer, 85 degrees of which is the standard of proof spirit; but whenever the government of the United States shall determine to employ a different hydrometer, the State gaugers shall procure and use hydrometers of the same description."*

Supplements to the act of 1825, passed in 1831, '32, and '33, made the offices of the commissioners of the counties of Harford, Allegany, and Anne Arundel, the depositories of the county standards, as there were no levy courts, by name, in those counties; the fees for trying and sealing weights and measures were also fixed.

In 1842 passed a resolution of the legislature, as follows:

"*Resolved by the general assembly of Maryland*, That the governor be, and he is hereby, authorized and directed to distribute to the levy courts or commissioners, as the case may be, of the several counties of this State, each, one standard of the several kinds of weights and measures which shall be received by this State from the United States."

The following table shows the dimensions and proportionate capacities for tobacco hogsheads, as established at different times by the laws of Maryland:†

Date.	Stave, length.		Head, diam.		Bilge, diameter.	Sum of diameter.—Head and bilge.	Proportional capacity.	Remarks.
	Max.	Min.	Max.	Min.				
	Inches	*Inches*	*Inches.*	*Inches.*	*Inches.*	*Inches.*		
1658..	43	42	27	26	.....	.....	100	
1692..	44	43	31	30	.....	.....	136	Hogshead to weigh 90 lbs.
1694..	48	46	32	31	.....	.....	156	Tare to be marked.
1704..	48	46	32	30	.....	.....	161	Tare to be rated by purchaser at 40 lbs. to the barrel.

* Report of J. H. Alexander, esq., on weights and measures, in 1825.
† Report of J H. Alexander, esq., on weights and measures, in 1825.

The dimensions of white and red oak staves and headings are fixed by acts of 1841 and '42, as follows:

Staves, 28 inches long, 3 inches wide, $\frac{5}{8}$ inch thick.

Headings, 18 inches long, 5 inches wide, $\frac{5}{8}$ inch thick.

The hundred weight of 100 pounds, and ton of 2,000 pounds, were established by a law of 1818, "respecting hay and straw brought for sale to the city of Baltimore."

The last law enacted by the legislature was that approved in 1842.

VIRGINIA.

The act passed by the legislature of Virginia in 1792, and which re-enacted a previous law of 1734, entitled "An act for more effectually obliging persons to buy and sell by weights and measures according to the English standard," continued in force until after the establishment by Congress of standard weights and measures. Upon the receipt of the balances by the State of Virginia, in accordance with the act of Congress of June 14, 1836, the legislature, by an act entitled "An act providing for the preservation and use of the standard weights and measures received from the general government," passed March 19, 1847, directed that they be placed in a suitable room of the capitol, in the custody of the clerk of the council, who was to be the "superintendent of the standard weights and measures;" from whom each county and corporation court had power to obtain verified standards of the same; which, when so obtained, were to be kept in the clerk's office of each county or corporation, or any other place that the court might designate. A more detailed act was subsequently passed, and is contained in chapter 89, "of weights and measures," of the "Code of Virginia." It enacts that "the weights, measures, and balances, received by this State under a resolution of Congress, approved the 14th day of June, 1836, and an act of Congress, approved the 7th day of July, 1838, shall be kept in the capitol, in a room to be assigned by the governor and fitted up for the purpose; they shall be the public standards of weights and measures in this State;" that the clerk of the council shall be ex-officio superintendent of weights and measures, until the governor should appoint another superintendent; that the court of each county or corporation shall provide, within one year from the passage of the act, and ever after keep at the expense of the county, a set of weights and measures of the following denominations, viz: "of dry measure, one half bushel, one peck, and one half peck, made of copper, pewter, or wood; of wine measure, one gallon, one half gallon, one quart, one pint, one half pint, and one gill, made of copper or pewter; one set of brass weights to four pounds, computed at sixteen ounces to the pound, with suitable scales and steel-beam; one set of iron weights, from one pound to fifty pounds; also, of long measure, one yard, made of brass, copper, or steel; and a set of troy weights, from the lowest denomination to eight ounces;"—all to be strictly conformable to the State standards, and verified by the State superintendent of weights and measures. The county standards to be kept by such persons as may be designated by

the court as "sealer of weights and measures," and to be re-compared with the State standards once in every ten years.

Every sealer of weights and measures shall, at least once in every year, give public notice of the times and places at which he will attend for the purpose of trying and proving the weights and measures in use by the citizens; and once in every three years he shall go around to all the shops, stores, hay scales, and platform balances, and try such as have not been brought to him, or as he has not been requested to test. The court is authorized to appoint more than one sealer of weights and measures, for each of which a set of standards, as above, are to be provided. Suitable scales are to be provided by the superintendent and by the sealers of weights and measures. The act specifies the fees to be paid to each for trying and sealing, the penalty for any county or corporation refusing to provide the above standards, for neglect of duty on the part of the superintendent or any sealer of weights and measures, and for any person using, in buying or selling, any weights, measures, scales, balances, steelyards, &c., not properly tried and sealed.

No tender by any bank of gold weighed with weights not sealed is legal.

It does not appear that the standards for the counties were provided as contemplated in the above law, for another law was passed March 15, 1851, for this purpose. The act is entitled "An act authorizing the governor and superintendent of weights and measures to contract for, and have manufactured in Virginia, weights and measures for each county and corporation in the State." These standards were to be made of cast iron, brass, or composition, instead of copper, or pewter, or wood, as established by the previous act; a set of balances is to be added; all to be manufactured as applied for by the counties, &c., and to be first paid for by the State; the amount being reimbursed by the counties or corporations when received by them. All the other provisions of the previous act are continued in force.

"An act concerning the salaries of certain officers of government, compensation of the members and officers of the general assembly, mileage, and other allowances," passed June 5, 1852, fixes the salary of the superintendent of weights and measures at three hundred dollars.

"An act increasing the fees of the sealer of weights and measures for the city of Richmond," passed January 12, 1853, increases the fees from five to eight cents for each piece tried and proved; and also makes it the sealer's duty to go around to all the shops, stores, &c., once in every two years, instead of three years, as established by chapter 89 of the Code of Virginia. No subsequent act touching the matter of weights and measures has been passed by the legislature.

NORTH CAROLINA.

An old law of the State, enacted prior to the Revolution, during the administration of Governor Gabriel Johnson, was in force at the date of Mr. Adams' report, in 1821. This was subsequently revised, and

adopted with the "Revised Statutes of North Carolina;" the standards established, however, were the same as by the terms of the old law, which were to be "according to the standard in the *Exchequer of England*, and which have been hitherto used in this State."

It required the justices of each county to provide for, and at the expense of the county, sealed weights of hundred, half hundred, quarters of hundred, half quarters of hundred, seven pounds, four, two, one, and a half pounds; yard and ell measures, of brass or copper; half bushel, peck, and *gallon*, dry measure; gallon, pottle, quart, and pint, of wine measure; also, a stamp for brass, tin, iron, lead, or pewter weights or measures; and a brand for wooden measures; all of which were to be kept at the court-house of the respective counties by a "standard keeper," to be elected by the justices of the county court. He was required to take an oath and give bond for the safe-keeping of the standards and the faithful performance of his duty. Every person using weights, measures, or steelyards, was required to bring them to the "standard keeper" for comparison, and to have them tried and sealed every two years; the standard keeper to seal such as were or could be made conformable to the standards; suitable penalties for using weights or measures for the purpose of buying or selling that have not been sealed are prescribed by the act.

The above act remained in force until the session of 1838–'39, when an act "concerning weights and measures" was passed, authorizing the governor "to procure for each of the counties of the State one complete set of all the weights and measures adopted as standards by resolution of Congress, approved the 14th of June, 1836, which shall correspond with the standards furnished for this State, by the Secretary of the Treasury of the United States, in pursuance of the said resolution," and take the most effective measures to have the above copies speedily and with little expense conveyed to the court-houses of the respective counties and delivered to the county clerks.

This was amended at the session of 1842–'43, by an act authorizing the governor to suspend the procuring of the *whole* sets of weights and measures for each of the counties, and to furnish only the following: a yard measure, to be made of substantial wood, to be stamped with the letters "N. C.," and to be placed in a secure wooden box; a half bushel, peck, gallon, half gallon, quart, pint, half pint, and gill, all to be stamped with the letters "N. C." Such of the other weights and measures, not in the foregoing list, as had been delivered to the clerk of one or more counties, were also to be furnished to the others.

Chapter 117 of the Revised Code adopts the standards of the United States, and provides for the distribution of copies thereof to the counties. Each person using weights or measures is required "to bring all his weights, or measures, or steelyards, to the standard keeper of the county where such person shall reside or trade, to be there tried by the standard;" and at least once in every two years thereafter shall have them re-examined and adjusted, under penalty for their use in default thereof of fifty dollars.

The measure of an acre of land is also fixed therein at one hundred and sixty square perches.

A copy of chapter 117 was furnished under seal, September 3, of the present year, by the executive, as containing the most recent legislation on the subject of weights and measures.

SOUTH CAROLINA.

The old laws of this State established the weights and measures in accordance with the "*London standards.*"

An act was passed December 8, 1840, "to provide weights and measures in each district," which directed that the clerk of the court of common pleas and general sessions of each judicial district should furnish and keep in his office the weights and measures established by law as the standards of the district; but the act does not define the standards.

After the receipt of the standards from the government, the legislature "*Resolved*, That his excellency the governor be, and he is hereby, requested to have duplicates of the weights and measures furnished to the State of South Carolina by the United States, and now in the town of Columbia, constructed out of some cheap and suitable materials, and sent to each of the clerks of the courts throughout the State, so that there may be accuracy and uniformity in weights and measures in the different districts."

Upon the receipt of the large balance intended for the State from the general government, the legislature, by a joint resolution, in December, 1845, requested the governor to receive it, and to have fitted up a suitable building in which it might be kept, together with the other balances to be received, and weights and measures.

An act was passed December 20, 1853, prescribing the mode to be adopted in measuring timber at Charleston, and another of the same date provides for supplying a set of the weights and measures established by law to the several judicial districts of the State not already furnished.

No recent enactments have been made by the legislature.

GEORGIA.

A law of this State, enacted on the 10th of December, 1803, which declared that the weights and measures established as standards by the cities of Augusta and Savannah should be the fixed standards of the State until the Congress of the United States should make provision on the subject, remained in force until 1839, at which time that portion of it relating to the *standards* was repealed by the following:

"'Act to amend an act passed December 10, 1803, entitled An act to make uniform a standard of weights and measures in this State,'" assented to December 23, 1839. It ordains that the standard of weights and measures adopted by the Congress of the United States shall be the standard weights and measures of the State.

It makes it the duty of the governor to procure immediately, in some cheap and economical way, one hundred copies of each of these

standards, then at Milledgeville; one of each to be given to each county, to be kept in the custody of the clerk of the "Inferior Court," and to issue his proclamation giving publicity to the fact, and calling upon all citizens to have their weights and measures tried and sealed by the standards. It prescribes the manner in which notice to the citizens shall be given by the justices of the inferior courts, and the penalties for using weights or measures not sealed, after the limited period had expired. The act to which this was amendatory specified the manner in which the comparisons with the standards should be made, and the fees to be charged.

An act was passed December 30, 1847, entitled "An act to abolish the allowance of 'tare' or gross weight on bales of unmanufactured cotton," which, as its title signifies, abolished the deduction which it had been customary, in some cases, to make from the actual weight of cotton, for the *tare* or draft; and specifies the penalty or fine for each bale upon which such deduction should have been made.

With these, the legislation in this State upon the general subject of weights and measures seems to have ended.

An act to regulate the weighing of cotton, rice, indigo or other product, approved March 3, 1856,* prescribes a form of oath to be taken by "any salesman or other person in any of the cities, towns, villages, railroad stations or depots in this State," before declaring the weight of such commodities.

FLORIDA.

By a letter from the governor of the State, it appears that no laws upon weights and measures have been passed by the legislature.

ALABAMA.

The first law upon the subject of "weights and measures," known to have been passed since Alabama became a State, was in 1828, and authorizes the secretary of State to procure, at the expense of the State, a set of weights and measures of the best quality for each county in the State. Each set was to consist of the following: one weight of 50 pounds, one of 25, 14, 7, and two of 4 pounds, of 2, and of 1 pound avoirdupois, "according to the *standard of the United States*," with proper scales for weights; also one foot, and one yard cloth measure; one half-bushel, one peck, and one half-peck, "dry measure;" "one gallon, one-half gallon, one quart, one pint, one-half pint, and one gill, *wine measure*."

A set was to be delivered to the clerk of the court of each county, by the secretary of State, as soon as they could be procured with convenience.

It prescribes the manner in which the county clerks shall give notice of the receipt of such standards; their duty in regard to testing all weights and measures presented to them for that purpose, with the fees in each case: and the penalty for using weights and meas-

* To alter amendment to an act approved February 7, 1854.

ures not thus tested and sealed, in buying or selling, after the lapse of three months from the time of the county clerk's notice.

A subsequent act, passed after the direction by Congress for distribution of weights and measures, declares that there shall be but "one standard of measure of length and surface, one of weight, and one of capacity, throughout this State," which shall be in conformity to the standards established by Congress. All contracts were to be construed in accordance thereto.

Any counties that had not received their standards in accordance with the law of 1828 were directed to be supplied as soon as practicable by the secretary of State at the expense of the State. The "judges of probate of each county," when furnished with such standards, were to give proper notice by advertisement. The law prescribes the manner in which the judges shall test the weights and measures brought to them, the seal, the fees to be charged, and the penalties for buying or selling with weights or measures not thus sealed.

In 1852, an act was passed entitled "An act to provide for the preservation of the balances intended for the adjustment of the standard weights and measures," (approved February 9, 1852,) which authorizes the governor to have a suitable building erected, at the cost of the State, and not to exceed a certain sum, for the reception of the weights and measures furnished to the State by Congress. It specifies that it shall be erected on the grounds of the university at Tuscaloosa, and be under the supervision of some member of the faculty. This building has been completed, according to the plan and dimensions furnished by the superintendent of weights and measures, and evinces a proper appreciation of the elaborate standards furnished by the United States, as well as a proper feeling as regards the general importance of the subject.

Up to the present date no alterations have been made in the laws relative to weights and measures in this State.

MISSISSIPPI.

The first act in relation to weights and measures passed by the legislature, after Mississippi became a State, was in 1818, entitled "An act to provide for inspections and for other purposes," approved February 6. It confirms the previous acts of the territorial legislature in the years 1807 and 1815, as far as the standards established by them are concerned, the avoirdupois weights of which were to be "according to the standard of the United States if one was established, but if there were none such, according to the *standard of London*" with liquid *wine* measures. The standards thus confirmed by the above act of 1818 were to continue "until Congress shall fix a standard for the United States."

Congress having, by act of June 14, 1836, directed the distribution of standards to the States, the legislature, by "An act to furnish a uniform standard of weights and measures to the several counties in the State of Mississippi," approved March 4, 1846, directed the secretary of State to furnish to the several "clerks of probate," as soon

as practicable, "a uniform standard of weights and measures according to the provisions of the act of Congress establishing a uniform standard of weights and measures for the United States." It is made the duty of each clerk to give notice of such standards, in at least five public places, requiring all millers, owners of cotton gins, grocers, and others vending by measures, and by weights, to have their weights and measures tried and proved by the above standards in his possession. The fines for refusal or neglect to comply with the above requirement, and the fees for trying and proving the weights and measures are defined. Each clerk has the power to appoint agents in different places in his county to aid in carrying out the provisions of the act.

The law of 1846 was re-enacted January 31, 1852, for the supply of standards to the counties.

General laws relative to weights and measures in this State remain unchanged up to the present time.

LOUISIANA.

Before Louisiana was admitted into the Union, the weights and measures used in the province were those of France.

By an act of the legislature of the 21st December, 1814, the governor of the State was required to procure, at the expense of the State, weights and measures corresponding with those used by the revenue officers of the United States, together with scales and a seal, to be deposited in the custody of the secretary of State, to serve as the general standard for the State.

By "An act supplementary to an act entitled 'an act to establish a uniform standard of weights and measures within this State,' approved December 21, 1814," (the act above referred to,) the sixth section of that act, specifying the penalties for keeping or using, for the purpose of buying and selling, weights, measures, or steelyards, not tried and sealed by a sealer of weights and measures, was re-enacted, but was restricted in its application to the parish of Orleans. This proviso was approved February 28, 1824.

The whole of the law of 1814 was re-enacted by an act approved June 1, 1846, entitled "An act to provide for the appointment of inspectors of weights and measures, to define their duties and for other purposes," with some modifications in regard to the appointment of "inspectors," their duties as regards the trial and proving of the weights and measures of the citizens, the sealing, &c.

It retains the "dry measure" to be known under the name of *barrel*, which shall contain three and a quarter bushels, *conformable to the American standard*, and be divided into half and quarter barrels. Coal is to be sold by the barrel or bushel; wheat, when sold by the bushel, shall be understood to mean 60 lbs., corn 56 lbs., oats 32 lbs., barley and rye 32 lbs. The above act, although it is a revival of the act of 1814, with slight modifications, yet contains a full adoption of the revenue standards in use at New Orleans.

No law appears to have been passed, in recognition or adoption, in express terms of the standards authorized to be distribnted to the States by the act of Congress of July 7, 1838.

The enactment of 1846 is the latest of which a copy is on file in this office relative to the subject of weights and measures.

TENNESSEE.

The first law on weights and measures in this State was passed in 1779, and is contained in chapter 11, of 1803, of the revised statutes. It does not establish *State* standards, but the first section directs the levying of a tax in all the *counties* of the State by the majority of the justices of the peace of each county, in order to procure the following standards, viz: "sealed weights of half hundreds, quarters of hundreds, seven pounds, four pounds, two pounds, one pound and half pound; measures of ell and yard, of brass or copper; measures of half bushel, peck and half peck, of dry measure; a gallon, *pottle*, quart, pint and half pint, of *wine measure;* stamps for brass, tin, iron, lead or pewter, and also brands for wooden measures." The standards are no more definitely described than that the gallon, pottle, &c., shall be of *wine measure;* but the wording of the act is very analogous to that of an act of the State of Virginia, passed August, 1734, and the standards described are identically the same, except that the law of Virginia declares in its first section that the standards shall be "*according to the standard of the exchequer in England.*" As the people of this State mostly came from Virginia, there appears to be little cause to doubt that the law in question was derived from the Virginia act, and was intended also to establish the English exchequer standards.

The law of 1779 directs that standard keepers, to be elected for each county, shall have charge of the standards, and, if necessary, accompanied by a constable, examine the weights, measures and steelyards, in use for buying and selling in the county, and any person found with false or altered weights, measures or steelyards, to be arrested, brought before a justice and bound over for trial. The weights and measures found true are to be sealed; the penalties for neglect to have such tried and sealed after due notice, for altering them after being once sealed, and for using weights and measures and steelyards that have not been tried and sealed, are defined.

Section 13 of the above law, prescribing heavy penalties for selling any kind of grain, salt, &c., in less measure than the standard, was repealed in 1831.

The act of March 1, 1856, adopts the United States standards furnished in 1854 as the legal units of weight and measure to be used throughout the State. This is the most recent act of legislation on the subject.

KENTUCKY.

By an act, approved February 1, 1839, the governor is authorized and requested to have made at the penitentiary one set of weights and measures for each county, "agreeably to the standards furnished by the general government of the United States, and now in posses

sion of the governor of this State." The act directs that each county court shall, on or before the 1st of January, 1840, provide for the use of the county, at the expense of the county, a set of the standards thus directed to be made; under a penalty of five dollars for each member for every court suffered to pass before compliance with the act.

Chapter 34 of the revised statutes of Kentucky contains a law which directs, as above, that the governor shall have manufactured for each county, not furnished therewith, a set of "weights, measures *and balances*," as duplicates of those furnished to the State by the United States; that each county court shall procure a set for the county, at the expense of the county, under a penalty for neglect, as above, by which standards any person desirous of having his weights and measures tested may have the same done by the person appointed to keep the standard, at a certain fee; that any person buying or selling by any weights, measures or balances, not thus tried and sealed, or who shall keep such for that purpose, shall pay a prescribed fine; that the *hundred weight* shall consist of 100 lbs., and the *ton* of 2,000; that a bushel of different substancesshall consist, in weight, as follows:

Wheat	60	lbs. to	the bushel.
Rye	56	"	"
Indian corn	56	"	"
Barley	48	"	"
Bran	20	"	"
Oats	33⅓	"	"
Potatoes	60	"	"
Beans	60	"	"
Clover seed	60	"	"
Timothy seed	45	"	"
Flax seed	56	"	"
Hemp seed	44	"	"
Buckwheat	52	"	"
Blue grass seed	14	"	"
Cornmeal	50	"	"
Onions	57	"	"
Salt	50	"	"

The weight of a bushel of potatoes was subsequently fixed at fifty-six pounds, of clover seed at fifty-six, bituminous coal at eighty pounds and of cannel coal at seventy pounds. Since the adoption of these regulations no laws have been passed on the subject.

OHIO.

The only law passed by this State previous to 1817, as appears from the report of Mr. Adams in 1821, was one in January, 1811, which merely directed the county commissioners of each county to cause to be made one half-bushel measure, to contain 1075.2 solid inches, which was to be kept in the county seat, and to be called the standard. This dimension is in exact proportion to the Winchester bushel.

This law was repealed by "An act regulating weights and measures," passed March 5, 1835, (modelled upon the law enacted in New York in 1826, as reported by Professor James Renwick, of Columbia College.) In nearly the whole it was a literal copy of that law, which was drawn with much care, ability, and scientific knowledge.

The standards established were—

1st. As *standard of length*, the *yard*, as used in the State of New York on the fourth of July, 1776, which had been found, by experiments with a brass rod, at Columbia College, in the city of New York, latitude 40° 42′ 43″ north, to bear to the pendulum at that place vibrating seconds in a vacuum, at the temperature of melting ice*, the proportion of one million (1,000,000) to one million eighty-six thousand one hundred and forty-one, (1,086,141.) The actual standard to be measured in a straight line between two points, engraven upon golden disks inserted into a straight brass rod.

2d. The standard of weight to be the *pound* of such magnitude that the weight of a cubic foot of distilled water, at its maximum density, weighed in a vacuum with brass weights, should be equal to 62½ pounds.

3d. The standard of *capacity* to be the *gallon*, of which there should be two kinds: one for liquids, to contain, at the mean pressure of the atmosphere at the level of the sea, *eight pounds* of distilled water, at its maximum density; the other, for *dry measure*, to contain *ten pounds* of distilled water under the same circumstances.

4th. The *bushel* was to contain 80 pounds of distilled water, or eight *gallons for dry* measure.

The unity of standards designed to be established, for length, weight, and measure, was thus in Ohio, as in New York, destroyed by introducing *two kinds* of gallons, one of which, the gallon for dry measure, should have been denominated a half-peck, and thus have avoided the confusion of having two standards of the same name, but of different capacities.

This law was amended by an act passed February 3, 1844, which specified that whenever *clover seed* should be sold by the bushel, and no special agreement made as to the measure or weight, the bushel should consist of *sixty pounds*.

The law of March 5, 1835, was repealed by "An act to provide for a uniform standard of weights and measures," passed February 21, 1846. It enacts "that there shall be but one standard of measure of length and surface, one of weight, and one measure of capacity, and also a standard hydrometer for ascertaining the strength of spirituous liquors throughout this State."

"That the standard of weights and measures furnished the State of Ohio, by the Secretary of the Treasury of the United States, under a resolution of Congress, approved June fourteenth, one thousand eight hundred and thirty-six, shall hereafter be the legal standard of weights and measures in this State." That they shall be deposited in the office of the secretary of State, who is *ex officio* "State sealer of weights and measures," and shall be kept in the boxes which were

* 39.10158 inches.

furnished by the general government, and only opened for the purpose of comparing the county standards, except by joint resolution of both houses of the general assembly, or upon the call of either house for information, or by order of the governor for scientific purposes.

The State sealer was required to provide copies of the original standards, for the use of each county, of the following materials, viz: one half-bushel measure of $\frac{1}{8}$th inch copper, with brass rim; one gallon measure of $\frac{1}{16}$th inch copper, with brass rim and handle; one half-gallon, one quart, one pint, and one half-pint, to be made in the same manner; fifty, twenty-five, twenty, ten, five, four, three, two, and one pound weights, avoirdupois, to be made of cast-iron, turned, polished, and tinned; and one half-pound, one quarter-pound, two ounce, one ounce, half-ounce, and quarter-ounce weights, troy, to be made of brass; one brass yard measure, graduated into feet, inches, and tenths. The State sealer to furnish copies of them before December 7, 1846, to each of the counties; the standards being marked with the letter "O," (Ohio,) and an appropriate device for each county, which device should be recorded and a copy of the record furnished with the standards.

The town sealers were to be furnished in the same manner, by the State sealer, with copies of the original standards, at the expense of the towns.

The act specifies the duties of the county and town sealers of weights and measures, the fees to be received, the penalties for neglect or non-performance of duty, the action in case of death, resignation, or removal from office, and the penalties for using weights or measures not tried and sealed, almost identical with the corresponding sections of the law of 1835.

The last two sections of the act establish the hydrometer constructed by Elisha and Charles Dwelle as the standard hydrometer for determining the strength of spirituous liquors, and declares the strength of proof, as designated by it, should be of the specific gravity of 93.67, at 60° of Fahrenheit, distilled water at the same temperature being reckoned 10,000.

It was also made the duty of the governor to appoint, every five years, one or more adjusters of hydrometers for the use of inspectors and others, in the State.

An amendment to this act, February 8, 1847, established the weight of a bushel of different substances, as follows:

Wheat	60	pounds	to the	bushel.
Indian corn	56	"	"	"
Rye or flax-seed	56	"	"	"
Barley	48	"	"	"
Clover-seed	64	"	"	"
Oats	32	"	"	"

"An act to establish the standard measure of stone coal, coke, and unslacked lime," passed February 14, 1848, established the bushel of stone coal, coke, and unslacked lime, to be equal to 2,688 cubic inches, the lawful measure for these substances to contain two bushels, and to be 24 inches diameter at the top, 20 inches at the bottom, and 14.1 inches deep.

An act was passed February 24, 1848, entitled "An act to *amend* the 'Act to provide for a uniform standard of weights and measures,' passed February 21, 1846." This specifies the damages to be recovered in a suit against any persons who have used in buying or selling, any weights, measures or beams, which have not been tried and sealed, by any person so defrauded.

The amendment of February 8, 1847, was still further amended by an act passed February 25, 1848, which merely changed the weight of a bushel of clover-seed from 64 pounds to 60 pounds.

March 23, 1850, a law was passed, entitled "An act supplementary to 'An act to provide for a uniform standard of weights and measures,' passed February 21, 1846," which supplies an omission in that law, by providing for furnishing each of the counties with a balance, with which to make the comparison of the weights.

These were to be made by contract, at the expense of the State, under the direction of the State sealer of weights and measures.

The act of 1850 was the last adopted by the legislature in reference to the subject of weights and measures.

MICHIGAN.

A territorial act of Michigan, "to regulate weights and measures," approved April 12, 1827, declares "That there shall be kept at the treasury office, to be in the custody, and under the care of the treasurer of the Territory for the time being, one just beam, one certain measure for distance, and capacity, that is to say, avoirdupois and troy weights; bushels, half-bushels, pecks, half-pecks, and quarts; and gallons, half-gallons, quarts, pints, half pints, and gills; and one certain rod for long measure; and that the standard of weights and measures, now in use in the *State of New York*, shall be the standard for ascertaining all beams, weights, and measures, throughout this Territory, until the Congress of the United States shall establish the standard of weights and measures for the United States."

The standards in use in New York, at that time, were derived from those in the English exchequer. The act provides for supplying the counties and townships with standards, and declares, that the territorial standards shall be of iron, brass or copper, as the treasurer shall direct; that those for the counties and townships, shall be of such materials as the supervisors of each county shall direct; that the clerk of each county and township shall be ex-officio sealer of weights and measures for the county or township; that the clerk of the county shall compare the county with the territorial standards once every three years, and that the clerks of the towns shall examine, try, and prove, the weights, measures, and steelyards, in use by the citizens. The act prescribes the fees to be received by the sealers of weights and measures, the penalties for using weights and measures not sealed, and for neglect, or refusal to comply with its requirements.

The whole of the above law is revived in Chapter 31, "Of Weights and Measures" of the "Revised Statutes of Michigan," adopted

May 18, 1846, with some additions, among which are the legal weights of a bushel of the following grains, &c.:

Wheat or clover-seed	60	pounds	to the	bushel.
Rye or Indian corn	56	"	"	"
Oats	32	"	"	"
Barley	48	"	"	"
Buckwheat	42	"	"	"
Dried apples or peaches	28	"	"	"

No law appears to have been passed adopting the United States standards, although they were all furnished to the State previous to 1842.

The last enactment relative to weights or measures is that referred to as having been made in 1846.

INDIANA.

The act of January 21, 1818, entitled "An act regulating weights and measures," was only a revival of the territorial act of 7th December, 1807. It authorized and required the several boards of county commissioners to provide for their several counties, at the expense of the same, a set of the following weights and measures, viz: "one measure of one foot, or twelve inches, *English measure*, so called; also, one measure of three feet, or thirty-six inches, as aforesaid; also, one half bushel measure for dry measure, which shall contain one thousand and seventy-five and one-fifth solid inches; also, one gallon measure which shall contain two hundred and thirty-one solid inches; which measures shall be of wood or any metal the court may think proper; also, one set of weights commonly called avoirdupois weights." These were to have the name or initial letter of the county stamped upon them, and were to be kept by the clerk of the circuit court of each county. The act specifies the manner and limit of the notice to be given to the citizens by the county commissioners as soon as they should have provided the standards; the manner in which the weights and measures of the citizens shall be tested by the clerks of the circuit courts, and the seal to be attached.

The law of 1818, with its amendments, was re-enacted June 9, 1852, by "An act for the regulation of weights and measures," contained in chapter 117 of the Revised Statutes. It recites the same description of the standards as before recognized by the State. In addition, the legal weight of a bushel of different kinds of grains is given in this act, and in an amendment approved March, 1, 1853, as follows:

Shelled corn	56	lbs. avoirdupois	to a bushel.
Indian corn, (on the cob)	68	"	"
Wheat	60	"	"
Buckwheat	50	"	"
Corn meal	50	"	"
Beans	60	"	"
Potatoes	60	"	"
Oats	32	"	"
Clover seed	60	"	"

Hemp seed	44 lbs.	avoirdupois	to a bushel.
Blue grass seed	14	"	"
Castor beans	46	"	"
Dried peaches	33	"	"
Dried apples	25	"	"
Onions	57	"	"
Salt	50	"	"
Mineral coal	70	"	"
Timothy seed	45	"	"
Rye	56	"	"
Flax seed	56	"	"
Barley	48	"	"

It will be observed that the United States standards have not been formally recognized by law in this State; although the defined contents of the *gallon* for liquid measures, (231 cubic inches,) and that of dry measure, (1075.2 cubic inches,) are exactly the same as the standard contents of the United States standards.

The act of 1852 was amended February 28, 1855, by changing the standard weight for onions from fifty-seven to forty-eight pounds the bushel, and fixing the weight of a ton of hay at two thousand pounds.

ILLINOIS.

Illinois was originally a part of the territory of Indiana, and retained the territorial act of the latter in relation to weights and measures until the 22d of March, 1819, when an act was passed, modelled upon the law of 21st January, 1818, but having the peculiarity of departure from the English standard weights by fixing the avoirdupois pound at 7,020 grains troy, instead of 7,000.

This act was repealed by "An act regulating weights and measures," approved March 4, 1843, which declares that "there shall be but one standard of measure, of length, and surface, one of weight, and one of capacity, throughout the State, which shall be in conformity with the standard of measures, length, surface, and weight, established by Congress," and directs that the secretary of State, who is to be ex-officio "State sealer of weights and measures," shall procure standards for the State in conformity thereto, as follows, viz: a yard, a pound, a liquid gallon, and a half bushel. These are to be considered as original standards, and deposited in his office in a chest, which is only to be opened for the purpose of making comparisons with the county standards, except by a joint resolution of both houses of the legislature, or on a call of either house for information, or by the order of the governor for scientific purposes.

Copies of these are to be made of such materials as the State sealer shall direct, and deposited in the office of the clerk of the commissioner's court of each county, who is to be responsible for their preservation.

The State standards are to be sealed with the letter "I," and the county standards with the same, and an additional device for each particular county. These devices were to be recorded in the State sealer's office, and copies also delivered with the county standards.

The law makes it the duty of the county sealer to test all weights and measures brought to him for that purpose, and seal those which are found to be in conformity with the standards; and in order that the sellers and all persons who use them, shall have their weights and measures so tested, it declares that any purchaser who is defrauded in consequence of a neglect on the part of the seller to do so, can obtain, by action for damage, five times its amount, with costs of suit The county sealer of weights and measures is also to compare the standards in his possession once in every ten years with those in the State sealer's office, and is made liable to a heavy fine in case of a failure to do so.

The following is established as the weight of a bushel of the different kinds of grain usually bought and sold in the State, in case of no special agreement as to weight or measurement being made between the buyer and seller, viz:

Sixty	pounds of	Wheat	to constitute a	*bushel.*
Fifty-four	"	Rye	"	"
Fifty-two	"	Indian corn	"	"
Forty-four	"	Barley	"	"
Forty	"	Buckwheat	"	"
Thirty-two	"	Oats	"	"

The "hundred weight" is to be understood to consist of one hundred pounds, and *twenty* such *hundreds* to make *one ton.*

All commodities sold by *heaped measure* are to be heaped up as high as the articles will admit in the form of a *cone*, the outside rim of the measure being the *base* of the cone. The dry commodities not heaped were to be stricken by a straight rod or a roller, which should be of the same diameter from end to end.

The above law as re-enacted March 3, 1845, is contained in chapter 108 "of weights and measures" of the revised statutes of the State.

It was amended by an act approved February 15, 1851, fixing the weight of a bushel of corn at fifty-six pounds, and that of February 17, 1851, which simply established the weight of a bushel of "castor beans" at 46 lbs. avoirdupois, and again, February 10, 1853, establishing the weight of a bushel of the following products, viz:

Field beans	56	lbs.	to the bushel.
Castor beans	46	"	"
Clover seed	60	"	"
Flax seed	54	"	"
Timothy seed	42	"	"
Hemp seed	40	"	"
Stone coal	80	"	"

An act approved February 14, 1855, fixed the weight of a bushel of each of the following commodities and repealed all laws inconsistent therewith:

Shelled corn	56	lbs.	to the bushel.
Corn in the ear	70	"	"
Wheat	60	"	"
Rye	56	"	"

Oats	32 lbs.	to the	bushel.
Barley	48 "	"	
Irish potatoes	60 "	"	
Sweet potatoes	55 "	"	
White beans	60 "	"	
Castor beans	46 "	"	
Clover seed	60 "	"	
Timothy seed	45 "	"	
Flax seed	56 "	"	
Hemp seed	44 "	"	
Blue grass seed	14 "	"	
Buckwheat	52 "	"	
Dried peaches	33 "	"	
Dried apples	24 "	"	
Onions	57 "	"	
Salt	50 "	"	
Stone coal	80 "	"	
Malt	38 "	"	
Bran	20 "	"	
Turnips	55 "	"	
Plastering hair	8 "	"	
Unslacked lime	80 "	"	
Corn meal	48 "	"	
Fine salt	55 "	"	

No subsequent action has been taken on the subject of weights and measures in this State.

IOWA.

It appears by communications from the secretary of State, that the law contained in chapter 56, of "weights and measures" of the code of Iowa, is the only one in regard to weights and measures in force in that State. This law makes it the duty of the State treasurer to procure, at the expense of the State, a set of the following weights and measures, to be kept in the treasurer's office, and to be the State standards, viz:

One yard and one foot measure; one half bushel, peck, and half peck, the half bushel to contain 1,075¼ cubic inches; one gallon, (231 cubic inches,) one quart, one pint, and one gill; a set of avoirdupois weights, consisting of a pound, a half pound, a quarter pound, an ounce and a ten pound weight.

The "perch" of mason's work or stone is declared to be 25 cubic feet.

All contracts in which there is no special agreement as to the weights or measures, are to be understood as above, with the exception of the measure of wheat, oats and all kinds of grain and seeds. The number of pounds of each which was to constitute a bushel is prescribed as follows:

Of wheat	60 lbs.	avoirdupois to the	bushel.
Of shelled corn	56 "	"	
Of corn in the cob	70 "	"	

Of rye	56 lbs.	avoirdupois	to the bushel.
Of oats	35	"	"
Of barley	48	"	"
Of potatoes	60	"	"
Of beans	60	"	"
Of bran	20	"	"
Of clover seed	60	"	"
Of timothy seed	45	"	"
Of flax seed	56	"	"
Of hemp seed	44	"	"
Of buckwheat	52	"	"
Of blue grass seed	14	"	"
Of castor beans	46	"	"
Of dried peaches	33	"	"
Of dried apples	24	"	"
Of onions	57	"	"
Of salt	50	"	"

As soon as the standards are procured, the treasurer is to give notice in a newspaper, upon which it is made the duty of the county judge of each county to obtain a set of weights and measures exactly corresponding to the State standards, and deposit them in the office of the county treasurer, to be there kept and to constitute the *county standards.*

The county treasurer shall "from time to time cause them to be tested by the State standards and made to agree therewith."

It authorizes any person wishing to have his weights or measures tested to call on the county treasurer for that purpose, and prescribes the fees to be paid the treasurer, who was to seal them if found true, or destroy them if not conformable to the standards.

The law does not, however, in order to force a compliance with its requisition, prescribe penalties for the use of weights and measures not thus sealed.

The standards thus established are identical in dimensions with the United States standards, although the latter, as such, are not recognized. The troy weights are not adopted.

The legislature of this State has made no subsequent enactment in regard to weights and measures.

WISCONSIN.

The "revised statutes" of 1839 contain an act passed while Wisconsin was a Territory, entitled, "An act to regulate weights and measures," which was evidently modeled upon the act of the State of New York of 1826. It declares that "there shall be but one standard of measure of length and surface, one of weight, and one of capacity in this Territory;" and establishes the following standards, all of which were to be according to those in legal use in the State of New York. 1st, the *yard,* as standard of length and surface; 2d, the unit or standard of the capacity measures to be the *gallon;* of which there were to be *two kinds,* one for *liquids* and one for *dry measure;* 3d,

the standard of weight to be the *pound*, divided into 16 ounces; no troy weights being established. It specifies the divisions and multiples of the above standards, and the dimensions of measures for the sale of articles by heaped measure, which are the same as those of New York. The above standards were to be procured by the treasurer of the Territory, who was ex-officio "sealer of weights and measures," and to be kept in his office. County standards, copies of the foregoing, were to be procured by the treasurer of each county, who was to be county sealer of weights and measures. These were to be sealed with the word "Wisconsin," and such other device as the treasurer should direct; and re-compared and sealed by the territorial standards once in every five years.

As soon as the standards were procured, public notice was to be given by the county sealer for all persons to have their weights, measures and steelyards tried and sealed.

The act provides for the transfer of the standards upon the death, resignation, or removal from office of the county sealer, to his successor, and for action in case of neglect or refusal to do so.

The fees are also defined, and the liabilities in case of any person being injured or defrauded by the use by any persons of weights, measures or steelyards not tried and sealed.

The hundred weight was to consist of 100 lbs., and the ton of 2,000 lbs.

The legal weight of a bushel of different kinds of grain, &c., was fixed as follows:

Wheat	60 lbs.	to the bushel.
Rye	56 "	"
Indian corn	56 "	"
Barley	45 "	"
Oats	32 "	"

The above act was renewed under the State organization, in an act contained in the revised statutes of the State A. D. 1849, chapter 42d "of weights and measures." The State treasurer was to be the "State sealer," and "the county treasurer the county sealer of weights and measures." The county standards, such as were not already provided, were to be procured by the "county supervisors," at the expense of each county, exactly conformable to the State standards, but of such material as the supervisors might direct; to be sealed with the letters "Wis.," and certified by the State sealer, and deposited in the county treasurer's office. They were to be re-compared and sealed every five years, from the 1st of January, 1850. The county sealer was to procure a seal with which to seal the town standards. The penalties for neglect of the board of supervisors to procure county standards, for neglect of duty on the part of any sealer of weights and measures, and the fees for sealing are specified.

The vibrating steelyards are to be allowed, when tried and proved by a sealer. The hundred weight is to consist of one hundred pounds avoirdupois.

The legal weight of a bushel of different kinds of grains, &c., is fixed as follows:

Wheat	60 lbs.	to a	bushel.
Clover seed	60 "		"
Rye	56 "		"
Indian corn	56 "		"
Oats	32 "		"
Barley	48 "		"
Buckwheat	42 "		"
Dried apples	28 "		"
Dried peaches	28 "		"

In heaped measures, the substances measured are to be heaped as high as can be without effort.

The above act, in the revised statutes of 1849, declares in its first section that "the weights and measures, together with the scales and beams * * * * *which are now or may hereafter be* deposited in the treasury of this State, shall be preserved by the treasurer and be the *public standards.*" In this light the following act may be considered an adoption of the United States standards, viz: "An act to provide for the receiving and safekeeping of the set of standard weights and measures, and to appropriate money to defray expenses," approved April 17, 1852; which, as its title indicates, merely authorizes the governor to provide for the receiving and safekeeping of the set of weights and measures in the United States treasury, subject to the order of the State. These have since been delivered and set up at the State capitol.

The last act of legislation (published March 31, 1854,) fixes the weight of a bushel of potatoes at sixty pounds, of flax seed at fifty-six pounds, and of timothy seed at forty-six pounds.

MISSOURI.

The territorial act of July 28, 1813, was re-enacted in December 18, 1824, and directed the several tribunals established for transacting county business within the State to provide for, and at the expense of, the respective counties, one foot, and one yard, English measures; one half-bushel, to contain 1,075¼ cubic inches, for dry measure; one gallon, to contain 231 cubic inches, and smaller measures in proportion; to be of wood or any metal the court should think proper; also one set of avoirdupois weights, and one seal, with the initial of the county inscribed thereon, all to be kept by the clerks of said tribunals for the purpose of trying and sealing the measures and weights used in the counties.

The use, or keeping to buy or sell, of weights and measures, not corresponding with these standards, after due notice, was prohibited under penalties by the same act; but with a proviso that all contracts or obligations made previous to the taking effect of the act should be settled, paid and executed agreeably to the weights and measures in common use when the contracts or obligations were made or entered into.

All persons wishing their weights and measures tried by the county standards are to apply to the clerk of the county, who, if he finds

them to correspond with the standards, shall seal them with the seal to be provided for that purpose.

The above act was renewed December 8, 1834, that portion defining the standards, and the duties of the county sealers, being verbatim the same as the old law. The penalties for knowingly using or keeping any measures or weights not conforming to the standards, after due notice has been given of their having been provided, is defined, but with a provision in another section that it shall not apply to the use of any weight or measure which may be to the advantage of the purchaser. Each constable is required, from time to time, to inspect the measures and weights used by millers, merchants, grocers, pedlers and other dealers within his township, and to report to some justice of the peace any violation of the act.

An act of February 13, 1841, declares, that hereafter, in the sales of hemp, 100 lbs. shall constitute the hundred weight.

A joint resolution of the senate and house of representatives, approved February 22, 1843, directs, that the weights and measures received by the State from the general government be deposited with the secretary of State for safe keeping, and that he shall correspond with the Secretary of the Treasury of the United States to ascertain if any more measures are to be furnished, and if so, to keep the same safely, and to report at the next session of the general assembly.

It does not, however, appear that any further action was taken with a view to their adoption by the State, for on the 17th of March, 1845, the old law of 1813, as renewed in 1834, was re-enacted almost verbatim, the only addition being a section fixing the weight of a bushel of different grains; wheat being fixed at 60 lbs, rye at 56 lbs., and Indian corn at 52 lbs. to the bushel. No troy weights were ever recognized by the State.

The act approved November 27, 1855, provides as follows:

Section 1. "The clerk of each county court shall provide, at the expense of the county, one measure of one foot, or twelve inches, English measure; one measure of three feet, or thirty-six inches, English measure, denominated one yard; one half-bushel measure, which shall contain one thousand seventy-five and one-fifth cubic inches, denominated dry measure; one gallon measure, which shall contain two hundred and thirty-one cubic inches; one half-gallon measure, which shall contain one hundred and fifteen and one-half cubic inches; one quart measure, which shall contain fifty-seven and three-fourths cubic inches; also one set of weights called avoirdupois weights, and one seal with initials of the county inscribed thereon; which measures, weights and seal shall be kept by the clerk of the county court of each county."

Section 4. "The hundred weight shall consist of one hundred pounds avoirdupois, and twenty such hundreds shall constitute a ton."

The fifth section of the same act fixes the weight of articles offered for sale by the bushel as follows:

Wheat, beans, clover seed or potatoes, sixty pounds to the bushel; rye, corn, or flaxseed, fifty-six pounds; barley, forty-eight pounds; oats, thirty-five pounds; bran, twenty pounds; onions, fifty-seven pounds; dried peaches, thirty-three pounds; dried apples, twenty-

four pounds; buckwheat, fifty-two pounds; castor beans, forty-six pounds; hemp seed, forty-four pounds; blue grass seed, fourteen pounds; salt, fifty pounds; mineral coal, eighty pounds.

The measure for charcoal is fixed at twenty-six hundred cubic inches per bushel.

ARKANSAS.

The only law of the State upon the subject is that of February 12, 1838, in force by the proclamation of the governor, of March 20, 1839, which is founded upon the law of Missouri of 1834, of which it is an almost literal copy. It establishes as standards the foot and the yard, English measure; the half bushel to contain 1,075¼ cubic inches for dry measure; the gallon to contain 231 cubic inches, and smaller measures in proportion for liquid or *wine measure;* a set of avoirdupois weights, made of iron or brass; all of which it requires the clerk of each county to procure for, and at the expense of, the respective counties, together with a seal with the initials of the county; which are to be securely kept by each clerk, who is to seal with the seal all weights and measures brought to him for that purpose which correspond with the above standards.

No legislative action has adopted the United States standards which have been furnished to the State, nor has the troy weight been established.

The most recent act relative to weights and measures is that passed in 1838.

TEXAS.

The only law on weights and measures in this State was enacted in 1846, and approved May 7, and authorizes the governor to procure, at the expense of the State, a set of weights and measures, in conformity with the standard adopted and in use by the government of the United States, which was declared to be the legal standard of the State; and to cause correct copies of the above standards, when procured, to be made, and after being properly inspected and sealed with an appropriate seal, to deliver a full set of such weights and measures, upon application, to the chief justice of each county, at the expense of the county. The county courts of the several counties are authorized to grant licenses to a suitable person or persons to make and vend weights and measures, under prescribed regulations, who are, however, not allowed to sell or distribute them until they have been inspected by some authorized person to see that they correspond with the State standard. No penalties are prescribed for using false weights and measures.

Inquiries made in 1853, and within the present year, have elicited no further information respecting the regulations which may be now in force.

CALIFORNIA.

By "An act to establish a standard of weights and measures," passed March 30, 1850, it is declared that there shall be but one standard of measure of length and surface, one of weights, and one of measure of capacity, throughout the State, which shall be in conformity with those established by Congress. It was made the duty of the secretary of state, who was to be ex-officio "State sealer of weights and measures," to procure, in conformity with the above, the following original standards, viz: a yard, a pound, a liquid gallon, and a half bushel; and to deposite them in a box or case in his office, which was only to be opened for the purpose of testing the county standards, except on the call of either house of the legislature, or by a joint resolution, or by the order of the governor, for scientific purposes; copies of the above original standards for and at the expense of each county, to be made of such materials as the State sealer might direct, were to be procured and deposited with the clerk of each county court, who was to be ex-officio county sealer of weights and measures; each of the copies being impressed by the State sealer with the letter "C," and such additional device for each county as the State sealer might direct, which was to be recorded in the State sealer's office, and a copy delivered to the county sealer with the standards.

All contracts for any work to be done or anything to be sold thereafter to be executed, were to be understood to be made according to the above standards. The hundred weight was to consist of 100 lbs. and the ton of 2,000 lbs.; articles sold by heaped measure were to be heaped in the form of a cone as high as the articles would permit, the outside of the measure being the base of the cone; and all articles not heaped, to be stricken with a straight stick or roller of the same diameter from end to end. The law directs the county sealers to compare the copies in their possession with the State standards once in every ten years under pain of a heavy fine, and to compare all weights and measures that may be brought to him for that purpose with the county standards; and if he finds them true, to seal them. The fees for sealing, as well as the liabilities for any person using any measures, weights, or beams, whereby any purchaser shall be injured or defrauded, are defined. The act fixes the weight of several kinds of grain which shall be taken for a bushel, as follows: wheat, 60 lbs.; rye, 54 lbs.; Indian corn, 52 lbs.; barley, 50 lbs.; buckwheat, 40 lbs.; and oats, 32 lbs.

The above act was amended by an act approved April 30, 1853, so as to make it the duty of the county sealer to procure, in addition to the standards enumerated in the act of 1850, the usual subdivisions of such weights and measures which were to be certified by the weigher and measurer of the United States custom house, and deposited in the office of the county sealer. They were to be sealed with the seal of the county court, and a certificate under the affidavit of the county sealer was to be entered upon the minutes of the court, a copy of which was to be transmitted to the secretary of state, and filed by him in his office. Each person using weights and measures is required by this amendment to have such tried and sealed by the

county sealer *every year*, and is prohibited using unsealed weights, measures, or beams, under a heavy fine.

By "An act to provide for the appointment of a gauger for the port of San Francisco," approved May 3, 1852, the gauger, to be appointed by the governor, is required, after taking oath and giving bonds for the faithful discharge of his duties, to gauge and inspect all liquors and wines which are, or shall arrive, in that city; the fees for which, as well as the fine for any person in the city selling or offering for sale any wines or liquors without the inspector's mark thereon, is prescribed.

The law of 1853 is the latest enacted in this State.

MINNESOTA TERRITORY.

The law in force in this Territory is the old territorial law of Wisconsin, and was adopted here in 1849. The standards established by it, as stated under the head of Wisconsin, are the *yard*, the *gallon*—of which there were to be two kinds, one for liquid and the other for dry measure—and the *pound*, all of which were to be according to the same as then in legal use in the State of New York.

The Revised Statutes of 1851 fix the hundred weight at one hundred pounds avoirdupois, and the weights of commodities sold by the bushel as follows:

Wheat at	60	pounds.	Buckwheat	42	pounds.
Clover seed	60	"	Barley	48	"
Rye	56	"	Dried apples	28	"
Indian corn	56	"	Dried peaches	28	"
Oats	32				

Section 12 of the Revised Statutes provides that the half bushel and parts shall be the standard measure for charcoal, fruits, and commodities usually sold by heaped measure, and that "in measuring such commodities, the half bushel or other smaller measure shall be heaped as high as may be without special effort or design."

Since 1851 no legislation has occurred bearing on the subject of weights or measures.

TERRITORY OF NEW MEXICO.

By the act of January 12, 1852, the United States standards are adopted and legalized as the weights and measures to be used in the Territory. The same act legalized the use of the *fanega*, *half fanega*, *almud*, *vara*, and the *cuartilla*, as measures of capacity; the *half fanega* to contain two thousand four hundred and seventy-six and a fourth cubic inches; the *almud*, as a measure of capacity, to be one-sixth part thereof; and the *cuartilla* to be equal to the United States standard pint measure. It was made the duty of the treasurer of the Territory to procure the standards authorized, and thereafter to approve and seal the weights and measures used by purchasers and venders, who were required to present the same for comparison yearly within sixty days from the expiration of thirty days' notice given by the treasurer, under a penalty, for using in default of such approval and seal, not to exceed one thousand dollars.

The act of February 8, 1853, repeals the general provision just recited, and directs that the judges of probate, in their respective counties, shall, on being informed that the treasurer of the Territory has procured standards, apply for sealed and approved copies thereof to serve as standards in the several counties; and the inhabitants of each county are to present to the probate judge their weights and measures for comparison within thirty days from the publication of notice to that effect. A fee of twenty-five cents is allowed to the treasurer of the Territory and judges of probate for each measure compared, and penalties attach of not less than twenty nor more than one hundred dollars for non-compliance with the provision relative to comparisons. The judges of probate every third year are to have the standards in their respective keeping compared with the weights and measures in the care of the treasurer of the Territory.

WASHINGTON TERRITORY.

AN ACT relative to weights and measures.

SECTION 1. *Be it enacted by the legislative assembly of the Territory of Washington*, That the weights and measures, together with the scales and beams, and those made in conformity therewith, which are now or may be hereafter deposited in the treasury of this Territory, shall be preserved by the treasurer and be the public standard in this Territory.

SEC. 2. The treasurer of the Territory shall be the sealer of weights and measures, and he shall have and keep a seal which shall be so formed as to impress the letters W. T. upon the weights and measures, scales and beams, to be sealed by him, with which he shall seal all such authorized public standards of weights and measures, and all the weights and measures, scales and beams to be provided by the several counties, when examined by said treasurer, and found to be in conformity with the standard weights and measures, scales and beams aforesaid; and the treasurer of each county shall be the sealer of weights and measures for said county, and he shall provide a suitable seal, and seal all weights and measures brought to him for that purpose when the same are found to be in conformity with the legal standards.

SEC. 3. When any commodity shall be sold by the hundred weight, it shall be understood to mean the net weight of one hundred pounds avoirdupois; and all contracts concerning goods and commodities sold by weight, shall be construed accordingly, unless such construction would be manifestly inconsistent with the special agreement of the parties contracting.

SEC. 4. Whenever wheat, rye, Indian corn, oats, barley, clover seed, buckwheat, dried apples, dried peaches, potatoes, or onions shall be sold by the bushel, and no special agreement as to the measure or weight thereof shall be made by the parties, the measure thereof shall be ascertained by weight, and shall be computed as follows:

Sixty pounds for a bushel of wheat or clover seed;
Fifty-six pounds for a bushel of rye or Indian corn;
Thirty-six pounds for a bushel of oats;

Forty-five pounds for a bushel of barley;
Forty-two pounds for a bushel of buckwheat;
Twenty-eight pounds for a bushel of dried apples or dried peaches;
Sixty pounds for a bushel of potatoes;
Fifty pounds for a bushel of onions, turnips, beets, and other vegetable roots.

SEC. 5. Two thousand one hundred and fifty and forty-two one-hundredths cubic inches shall be the contents of the legal bushel within the meaning of this act, and the half bushel and parts thereof shall be the standard measure for charcoal, fruits, and other commodities customarily sold by heaped measure; and in measuring such commodities the half bushel or other smaller measure shall be heaped as high as may be without special effort or design.

To the laws recited above, was appended the certificate of the secretary of the Territory, Charges H. Mason, esq., under date December 17, 1856; and the letter of the governor forwarding them intimates that no other laws have been passed in relation to weights and measures.

Many kinds of grains, seeds, and other substances, which have been bought and sold by measure, are now usually exchanged by weight; and most of the States have established by law the number of pounds avoirdupois which shall be understood to constitute a bushel, unless there be some special agreement as to the measure between the buyer and seller. Of some grains, &c., the legal weight of the bushel in different States is not always the same, which, no doubt, arises from the variety of the weight of the product in different soils. The table (see Appendix No. 14) of the legal weights of these different products in the respective States will illustrate this.

The following States have enacted that one hundred avoirdupois pounds shall be the legal hundred weight, and two thousand pounds the legal ton:

California, Connecticut, Iowa, Illinois, Indiana, Kentucky, Maine, Maryland, Missouri, New Hampshire, New York, New Jersey, Ohio, Rhode Island, Vermont, Wisconsin, and Massachusetts.

In Michigan, and Minnesota and Washington Territories, the hundred weight, by law, is fixed at one hundred pounds.

From the foregoing abstract of the laws of the several States, it may be seen that a great advance has been made towards uniformity of law; and from the well known action of several States in the matter, the uniformity of fact seems to have received a large share of public attention.

The two parts of the plan submitted by the Hon. John Q. Adams, for the action of Congress, were—1st. To fix the standard, with the partial uniformity of which it is susceptible, for the present, excluding all innovations. 2d. To consult with foreign nations for the future and ultimate establishment of universal and permanent uniformity.

In regard to the first part of the plan, the essential principle was laid down by Mr. Adams that, in the establishment of the standards for the Union, no innovations should be allowed in the system then recognized in the country, no trifling or partial attempts at change should be permitted, and all attempts at either should be steadily rejected by Congress as unworthy of the high purposes of the subject, as not only not leading to uniformity, but as tending to the reverse, namely: to increase diversity and confusion. Mr. Hassler, whose conclusions on this matter agreed in the main with Mr. Adams, examined the weights and measures from the custom-houses of the United States and determined those which, in the midst of much diversity, were in most general use.

It has always appeared to me matter of regret that this opportunity was not taken so far to simplify the actual standards as to use but one pound as the unit of weight, and one measure of capacity, deciding between the avoirdupois and troy pounds and the dry and liquid measures. Such a reform would, I think, have been gladly accepted.

Another most desirable one, in my estimation, would have been the introduction of the decimal subdivision, similar to those in our coinage—a change which would have been very difficult to effect while old usages and old weights and measures were so generally diffused among the States. This reform might, possibly, have jeoparded the other. When made—and it will one day assuredly be made—this reform will require the exercise by Congress of its constitutional prerogative. The material standards, too, must be withdrawn and the new ones be diffused. One generation would nearly suffice to effect this change if, as in Holland, the new weights and measures were introduced through the schools. The children of the country becoming familiar with them in the primary schools, seeing the actual material standards of length, capacity, and weight, at frequent and stated times in early youth, and retaining that familiarity as they passed into the higher schools, would be readily prepared for their universal use when reaching mature life. But the old material standards must disappear, and not, as in our coinage, be tolerated by usage alongside of the lawful standards, destroying which Mr. Adams has so well called the uniformity of fact.

A third desirable change, in my judgment, would have been to establish simple relations between the length and capacity unit, and to connect them with the unit of weight. This could have been done without altering practically the standards in use.

Such changes were, in general, avoided, and probably upon the principle laid down by Mr. Adams. Coming into the charge of an unfinished work, I conformed as far as I could to the plans already in part executed by my predecessor, Mr. Hassler, as I could co-operate heartily in the endeavor to produce that uniformity of fact which was the basis of the system. I have not failed, from time to time, to press forward the second part of this established system, namely, the endeavor at universal uniformity.

The same principle was carried out in the action of Congress, in June, 1836, establishing the present standards, and providing for their distribution to each of the States. The importance was fully felt by those entrusted with procuring accurate copies of the English

original, and in constructing the elaborate copies for the States and custom-houses; and it has so far been carried out by the States in a manner very gratifying to those interested in the subject.

The first part of Mr. Adams' plan has (as far as legal standards are concerned, and in a great degree) been accomplished, but the second part, that which recommends the consultation with foreign nations for the ultimate establishment of universal uniformity, remains yet to be acted on. The importance of the subject cannot but be deeply felt by every one truly interested in the universal brotherhood and substantial improvement of the human race. France was the first to take an important step in the matter, in the projection and final accomplishment of the great work of the measurement of an arc of the meridian passing through her territory, thus giving an ultimate natural standard to which all measures of extension might be referred. To this work she gave the important and universal character which it deserved by inviting the co-operation of all nations. The subsequent adoption of the metrical system with the metre, the forty millionth part of the circumference of the earth as the unit of linear measurement, was a great era in the progress of uniformity.

True, the progress of science has shown that this metre is not really the forty millionth part of the meridian, as supposed; true, that Great Britain has developed an opposition to this national standard which seems almost insuperable, and has been followed by the continental nations in this opposition.

The first fact does not necessarily imply the change of unit, though it does point to the failure to realize its true extent; but the second seems conclusive in regard to the necessity for new efforts at international uniformity.

In these remarks, as well as in my former reports, I have purposely avoided the subject of the coinage, though the same general principles apply obviously to it, partly, that under the law it is in a very different condition from that of weights and measures, but more from the reserve which I think executive officers in different branches of the government should have in touching upon subjects confided by law to others. As a citizen, I take a deep interest in the subject of international coinage, but, as an officer of the Treasury Department, look to the United States mint for suggestions in regard to its alteration.

By reference to the interesting account of the metrical system, in the letter of M. Silbermann, (Appendix No. 17,) it will be seen that it has extended widely beyond the boundaries of France, and has been adopted by law in Spain, Belgium, Greece, Holland, Lombardy, Poland, and Switzerland, in Europe; and Chili, Columbia, and Mexico, on this continent.

This shows great interest and progress in the establishment of the metrical system. The system of England has likewise been improved, and is now formed upon a sound basis. Both it and the system of the United States are now well established and clearly defined; those of other countries are more or less so, and thus will be endured easier the work of ascertaining the relations of these partial systems of the different nations, and of combining them all in one permanent and universal system for all nations.

The troubles in Europe, subsequent to my report of 1847–'48, were unfavorable to action in accordance with the suggestions in relation to this matter contained in it; and although similar indications appear at the present time, a movement is yet perceptible there in regard to the subject of universal uniformity, which is highly favorable to the action proposed. And has not the time arrived, in the general progress of commercial and international intercourse, and the rapid advance of our own country in science, wealth, and power, when her voice should be heard in an important matter like this? Should not Congress make the proposition to all nations to meet, by their representatives, and consult for the purpose of establishing permanent and universal uniformity of weights and measures? Such action could not fail to meet with a response due to the greatness of the subject, and, if the great object be attained, to lead to results productive of vast and lasting benefit to the human race.

Very respectfully submitted.

A. D. BACHE,
Superintendent of Weights and Measures.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

APPENDIX No. 1.

Resolution of Congress providing for the distribution of weights and measures.

From the acts of the twenty-fourth Congress of the United States.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he hereby is, directed to cause a complete set of all the weights and measures adopted as standards, and now either made, or in progress of manufacture, for the use of the several custom-houses, and for other purposes, to be delivered to the governor of each State in the Union, or such person as he may appoint, for the use of the States respectively, to the end that a uniform standard of weights and measures may be established thoughout the United States.

Approved June 14, 1836.

DEPARTMENT OF STATE,
June 15, 1836.

A true copy, compared with the roll in this office.

ASBURY DICKINS.
Chief Clerk.

See "United States Statute at Large," Vol. 5, page 133.

APPENDIX No. 2.

Act of Congress of 1799, directing a semi-yearly comparison of weights and measures used in custom-houses.

By a law of Congress, passed in 1799, 5th Congress, 2d session, it was ordered that "the surveyor [of each port of the United States] shall, from time to time, and particularly on the first Monday in January and July in each year, examine and try the weights, measures and other instruments used in ascertaining the duties on imports, with standards to be provided by each collector, at the public expense, for that purpose; and when disagreements and errors are discovered, he shall report the same to the collector, and obey and execute such directions as he may receive for the correction thereof, agreeably to the standards aforesaid."—(Statutes at Large, Vol 1, page 643.)

APPENDIX No. 3.

Act of Congress of 1825, authorizing the Secretary of the Treasury to adopt a new hydrometer for ascertaining the proof of liquors in the custom-houses.

From the acts of the eighteenth Congress of the United States.

CHAPTER IV. *An act authorizing the Secretary of the Treasury to adopt a new hydrometer for ascertaining the proof of liquors.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized, under the direction of the President of the United States, to adopt and substitute such hydrometer as he may deem best calculated to promote the public interest, in lieu of that now prescribed by law, for the purpose of ascertaining the proof of liquors; and that after such adoption and substitution, the duties imposed by law upon distilled spirits shall be levied, collected and paid according to the proof ascertained by any hydrometer so substituted and adopted.

Approved January 12, 1853.

See "United States Statutes at Large," Vol. 4, page 79.

APPENDIX No. 4.

Circular to the governors of States in regard to balances.

OFFICE OF WEIGHTS AND MEASURES,
Washington, September 13, 1853.

SIR: I have the honor to inform you that a set of balances, intended for the adjustment of standard weights and capacity measures, and furnished to your State under act of Congress, is now ready for delivery,

and would respectfully ask your directions as to the time and place of delivery, and as to the person who may be duly authorized by you to receive it. The balances are of three different sizes, for the adjustment of heavy, medium and light weights, or of large, medium and small capacity measures. The balance of the largest size is contained, with its appendages, in five boxes about 5½ feet long, and from about 3½ feet to 10 inches wide, and 20 to 10 inches deep. It will require a space of about 6 by 8 feet to set it up properly. The balance of the medium size will require a space of 6 feet by 6; and that of the smallest size of 3 feet by 6. They should be placed upon a firm foundation, on a ground floor or partition-wall built of brick or other masonry.

I append a drawing of a small building, which would be appropriate for the preservation and use of the standards of weights and measures, which have been or are to be distributed to your State, and would respectfully recommend that such a one may be provided for these elaborate and costly standards. They should at least be preserved in a fire-proof building, and placed upon a very firm floor. When you are prepared to receive the balances, which are now ready for delivery to you, the assistant of weights and measures will be sent to set it up and explain its construction and use to the agent in whose charge you may place it. It would be desirable that a scientific gentlemen, connected with some institution of learning in your State, should have the charge of the standards of weights and measures, and of the balances, and that they should only be used under his direction for the adjustment or verification of county or other standards.

By an answer addressed to me at this office, under cover to the Secretary of the Treasury, you will oblige yours, very respectfully,

A. D. BACHE,
Superintendent of Weights and Measures.

His Excellency the GOVERNOR *of the State of* ———.

Plate 4

APPENDIX No. 6.

Reports in relation to the analysis of sugars, molasses, &c., and hydrometers for the custom-houses.

1. A report of chemical analysis of sugars, molasses, &c., and of researches on hydrometers made under the superintendence of Professor A. D. Bache, by Professor R. S. McCulloh, February 17, 1845.—(Senate document 165, 28th Congress, 2d session.)

2. A report of scientific investigations relative to the chemical nature of saccharine substances, and the art of manufacturing sugar, made under the direction of Professor A. D. Bache, by Professor R. S. McCulloh, February 27, 1847.—(Senate 209, 29th Congress, 2d session.)

3. Second report on inquiries and researches relative to hydrometers, &c., made under the superintendence of Professor A. D. Bache, by Professor R. S. McCulloh, May 29, 1848.

4. Report upon the preparation of the hydrometers and manual of tables to be used in testing the strength of spirituous liquors in the custom-houses, under the superintendence of Professor A. D. Bache, by Professor R. S. McCulloh, February 26, 1849.

5. Report upon the delivery of the hydrometers and manual of tables to the collectors of the ports east of Richmond, and the condition of the standard weights and measures furnished to the custom-houses, made June 28, 1851.

There are two reports from the Treasury Department, dated June 15, 1844, and July 31, 1846, relating to this subject. The first communicating copies of regulations in relation to the importation of foreign sugar and molasses.—(Senate document 12, 28th Congress, 2d session.) The second relative to frauds in recent importations of sugar and molasses from the West India islands, and the measures necessary to prevent their recurrence.—(Senate No. 467, 29th Congress, 1st session.)

APPENDIX No. 7.

Report of Woods Baker, esq., upon the delivery of the hydrometers and the condition of the standard weights and measures furnished to the custom-houses.

OFFICE OF WEIGHTS AND MEASURES,
Washington, June 28, 1851.

SIR: In pursuance of an appointment of the Secretary of the Treasury, dated August 27, 1850, I received your instructions directing me to perform the following duties:

1st. To deliver to the collectors of customs of certain named ports between Portland, Maine, and Alexandria, Virginia, the hydrome-

ters, or spirit test, made by J. G. Greiner, jr., of Berlin, and the manual of tables accompanying them, which were to be furnished to me by Professor R. S. McCulloh, of the college of New Jersey, Princeton.

2d. To receive from the several collectors of the ports above alluded to all the old hydrometers of Dycas' patent, and others heretofore authorized, or which had been or were then in use, and to subject them to a comparative examination in order to determine their reliability.

3d. To ascertain the condition of the standard weights and measures furnished to the several custom-houses, above alluded to, by the Treasury Department, and to ascertain whether the verification of the weights and measures in common use is made as directed by the law of 1799.

4th. To make inquiries into the modes of estimating the quantity of spirits and other liquids contained in casks, by gauging or otherwise. These duties having been severally performed as required, I respectfully submit the following report in relation to them respectively:

1st. The delivery of hydrometers and manuals.

Having received the requisite number of hydrometers and manuals from Professor R. S. McCulloh, who had previously verified them, with my assistance under your superintendence, by comparison with standard instruments, (see Senate document No. 28, 31st Congress, 2d session, page 19,) I proceeded directly to the first point of delivery, Portland, Maine, and then visited each of the custom-houses successively, and in the order stated in the following table, No. 1. To each collector a circular was delivered, authorizing me to act in the matter, of which the following is the form:

(CIRCULAR—NEW SERIES—No. 41.)

TREASURY DEPARTMENT,
August 12, 1850.

SIR: By authority of an act of Congress approved January 12, 1825, and under the direction of the President of the United States, I have adopted and do hereby substitute the centesimal alcoholometer of Tralles for the hydrometer of Dycas, to be used hereafter for ascertaining the proof of liquors and levying duties thereon.

This letter will be handed to you by Woods Baker, esq., who will receive from you all the hydrometers in your possession belonging to the United States, and which you are hereby directed to deliver to him, taking his receipt therefor; in return, he will deliver to you and take your receipt for whatever number of spirit proofs and manuals of tables he may have been instructed to leave with you.

In using the Treasury spirit proof and the tables, the directions given in the latter, as well as those in the instruction herein enclosed, drawn up by Professor R. S. McCulloh, approved by Professor A. D. Bache, and adopted by this department, must be closely followed.

The bearer is instructed to show to you and to your subordinates the manner of using said spirit proof and tables; and you are re-

ferred to Senate document No. 50, 1st session 30th Congress, for much detailed information.

In the event of accidental fracture of the instruments entrusted to you, you will not attempt to replace them by purchasing others, (which is hereby prohibited,) but will promptly apply to this department and be furnished with such as shall have been verified by comparison with the standards provided for the purpose.

Very respectfully, your obedient,

THOMAS CORWIN,
Secretary of the Treasury.

To COLLECTOR *of port of* ———.

In delivering the hydrometers, or spirit proofs and manuals, I endeavored to explain fully and clearly to the collectors and their subordinate officers, and especially to the "*provers*," the principle upon which the instrument was founded, and the mode of using it, referring them, for more detailed information, to the document mentioned in the above circular. They were also particularly charged to abandon the use of the terms "first proof," "second proof," &c., which, by the adoption of the new instrument, had become obsolete, and, instead of the old practice, to mark upon casks the strength as given by the table of true per cents. of the manual. They were also directed to apply to the Treasury Department for other instruments in case of fracture of those given them, and not to supply themselves from the nearest shop, as the practice was when the old hydrometers were used, thus incurring the risk of obtaining an inaccurate instrument. To avoid breakages, they were advised to conform strictly to the directions given in the following printed copy of instructions, which accompanied each hydrometer:

INSTRUCTIONS TO THE UNITED STATES REVENUE OFFICERS.

1st. The hydrometer or spirit proof of Tralles, as made of glass by J. G. Greiner, jr., and adopted by the United States government, consists of a bulb containing an accurate Fahrenheit thermometer, and an attached stem enclosing a scale graduated to show the apparent per cents. by volume of alcohol contained in spirituous liquors. The instrument is packed with a glass cylinder in a morocco case.

2d. To use said spirit proof, pour a portion of the spirits to be inspected into the glass cylinder, immerse the instrument in it, with its bulb downwards, and allow the whole to stand a few moments to attain uniformity of temperature; then observe the indication, or that per cent. upon the graduated stem which is in the plane of the surface of the liquor, and the temperature shown by the thermometer, and refer to the manual of tables to obtain the true per cent. or commercial value corresponding to the observed data, as therein explained.

3d. Indications should not be read by looking down upon the stem or graduated scale of the instrument, and upon the top of the liquor, but from below upwards through the side of the glass cylinder, and the liquor itself if sufficiently clear, or in the plane of the surface if otherwise. The reason of this is, that the small portion of the liquor

which is drawn up by capillarity upon the stem may cause error if the indication is read from above.

4th. Gauging and proving of liquors must in all instances be performed simultaneously, and not separately or at different temperatures.

5th. All gauging of alcoholic liquors are hereafter to be reduced (table 1 of the manual) to the volumes they would have at the mean or standard temperature of 60° Fahrenheit, to which temperature their strengths are also referred.

6th. In describing the strengths of liquors, and marking cases therewith, the *true per cent.* by volume (table 1 of the manual) will hereafter be always substituted for the obsolete terms "first proof," "second proof," &c.

7th. When instruments have been used they should not be put back wet into their cases, but be first gently and carefully wiped dry with a soft cloth.

8th. To avoid frequent accidents, the instruments should always be handled with extreme care, by its bulb rather than by its delicate stem, and it should not be laid down on hard tables, or other bodies.

9th. Never attempt to remove the glass cylinder and the spirit proof both together from their case, or hold them in contact in one hand.

10th. Careless handling of these delicate instruments by curious persons should never be permitted, and it should always be borne in mind by those entrusted with them that their fragility demands constant care and attention.

RICHARD S. McCULLOH, *Assistant, &c.*

Approved by

A. D. BACHE,
Superintendent of Weights and Measures.

It may be well to remark here, that section 4 of the above instructions was introduced for the purpose of facilitating the computation, by means of table 3 of the manual, of the quantity of absolute alcohol contained in a cask of spirits, should Congress at any future time pass a law directing specific duties to be levied upon spirits. The value of the coarse liquors, as whiskey, rum, gin, alcohol, inferior wines and brandies, Jamaica spirits, &c., depending chiefly upon their strength or the amount of absolute alcohol contained in them, the quantity of absolute alcohol would naturally furnish the basis for the duty upon such liquors; while in the case of the finer wines and brandies, flavor being the chief element of their value, an *ad valorem* duty would be required in order to render the tariff of charges perfectly just. Under the existing *ad valorem* tariff, the direction above alluded to need not be carried into effect, as the strength marked upon a cask of spirits is not combined with its contents to determine the duty upon it. Indeed, it is doubtful whether it is expedient to require conformity to it at any time, especially at the larger ports. The offices of "proving" and "marking" and of gauging at these ports are separate and distinct; and it is found in practice that both operations cannot at all times be carried on together consistently with as rapid a discharge of business. Performing the two operations sepa-

rately would incur a little more computation only, in case the temperature of the two determinations differed.

It was also found that practical difficulties would be encountered in enforcing the regulation embraced in section 5 of the above instructions. You were duly informed of the obstacles in this case, and it was deemed advisable to suspend its execution until the practice of gauging, as practised in the United States custom-houses, was investigated, and a uniform system adopted by the Treasury Department.

At the more important ports, as Boston and New York, I not only explained the manner of using the hydrometers and manuals in the offices of the "provers," but accompanied them to the wharves and instructed them practically. They found no difficulty in comprehending and applying the new instrument, and in nearly every instance they expressed themselves pleased with its simplicity and general superiority to the old one, and made no objection to resign the use of the old ones and deliver them to me, as directed by the circular.

The following table contains a list of the custom-houses at which I delivered, in person, the number of instruments stated, together with those sent to the western coast by other means of conveyance. It presents a complete schedule of the distribution up to this date.

Of the 100 hydrometers purchased from Greiner, 49 have been distributed, as shown in the preceding table; the remainder have been disposed of as follows:

3 deposited in the Treasury Department.

2 delivered to Hackenrath & Van Damme, of New York, by authority of Treasury Department, to be replaced.

1 presented to the British Excise Department.

1 presented to the Smithsonian Institution.

3 retained by Professor R. S. McCulloh.

42 are herewith returned to the office of weights and measures.

NOTE.—*The following supplementary table shows the distribution made of hydrometers since the death of Mr. Baker, in* 1852:

Where delivered.	By whom receipted for.	No. of hydrs.	No. of man.	When delivered.	By whom delivered.
Charleston, S. C	Surveyor of port	1	1	Dec'r, 1852	C. O. Boutelle.
Savannah, Ga	Deputy collector	1	1	Ap'l 26, 1853	Prof. A. D. Bache.
Georgetown, S. C	Collector	1	1	Ap'l 29, 1853	Prof. A. D. Bache.
Wilmington, N. C	Surveyor of port	1	1	May 7, 1853	Prof. A. D. Bache.
New York		1		May 23, 1853	Adams & Co.'s Exp.
Bureau of Provisions and Clothing*		1	1	Feb. 23, 1854	
Boston		4		Mar. 30, 1854	Adams & Co.'s Exp.
Boston		6		Jan. 7, 1856	Adams & Co.'s Exp.
New Haven, Conn		2		Feb. 7, 1856	Adams & Co.'s Exp.
New Orleans, La	Collector	3	3	Feb. 25, 1856	Dr. B. A. Gould, jr.
New York		6		Ap'l 26, 1856	Adams & Co.'s Exp.

Twenty-five of these instruments were procured of Greiner & Son in the past summer. The number now on hand for distribution to the custom-houses is thirty-four.

2. OLD HYDROMETERS RECEIVED AND COMPARED.

The old hydrometers collected at the several custom-houses visited were of various constructions, though chiefly of Dycas' patent, and, with but few exceptions, in a most dilapidated condition, as the following detailed statement will show:

Portland, Maine, 1. No. 5,222, Dycas' patent, new kind. A new instrument. Glass cylinder lost; with this exception, in perfect order.

Portland, Maine, 2. No. 4,719, Dycas' patent, new kind; box badly broken. Thermometer broken; bulb dinged slightly; three brass weights lost; glass cylinder lost.

Portsmouth, New Hampshire. No. 8, Dycas' patent, old kind; without glass cylinder; 14 brass weights lost.

Portsmouth, New Hampshire. Two extra scales and a lot of extra weights.

Newburyport, Massachusetts, 1. (Without number,) no thermometer; very roughly constructed.

* Delivered to Purser Sinclair.

Newburyport, Massachusetts, 2. No. 1,069, Dycas' patent; thermometer lost; bulb dinted badly; 8 weights lost; the whole in very dirty condition.

Salem, Massachusetts, 1. (Without number,) Dycas' old kind, without thermometer; bulb dinted, and stem bent; scale lost and 10 weights lost.

Salem, Massachusetts, 2. No. 1,045, Dycas' patent; thermometer lost; bulb very badly dinted; 1 weight lost.

Salem, Massachusetts. No. 4,849, Dycas' patent; thermometer lost; glass cylinder lost; imperfect stem; one weight lost.

Boston, Massachusetts, 1. No. 4,812, Dycas' old kind; without thermometer; scale lost; bulb dinted; some of the weights belong to a different bulb; 1 lost.

Boston, Massachusetts. No. 2, (without number,) no thermometer; bulb dinted; scale lost; one weight lost.

Boston, Massachusetts, 3. No. 5,334, made by Thomas Barnett, London; without thermometer; large box-wood scale; a heavy stem attached to bulb; letters of the alphabet on stem indicating divisions; only four weights belong to it.

Boston, Massachusetts. No. 3,926, Dycas' patent, a new instrument, in good condition, except four weights lost.

Boston, Massachusetts. Four extra scales, extra weights, and one bulb without box.

Barnstable, Massachusetts. A rough old instrument, by Christopher Colles, of New York, with hollow cylindrical stem; 11 weights to be screwed on to correct for temperature, marked, respectively, 30 ex. cold; 35 very cold; 40 cold; 45 cool; 50 temperate; 55 warmth; 60 warm; 65 very warm; 70 hot; 75 very hot; 80 ex. hot.

New Bedford, Massachusetts. An old instrument like that at Barnstable.

Providence, Rhode Island, 1. No. 75, Dycas, made by Fisher & Son, Philadelphia, in good order.

Providence, Rhode Island, 2. No. 2,676, A Dycas saccharometer in good order, except the thermometer, lost.

Providence, Rhode Island, 3. Christopher Colles, like the one at Barnstable.

New Haven, Connecticut, 1. No. 9, Dycas, made by Fisher & Son. Thermometer broken; scale broken; bulb dinted.

New Haven, Connecticut, 2. No. 2,078, Dycas; bulb dinted, one weight lost.

New Haven, Connecticut, 3. No. 2,068, Dycas; bulb dinted; thermometer having been broken, replaced by another, one weight lost.

New Haven, Connecticut, 4. No. 361, Dycas; bulb dinted; one weight lost.

New Haven, Connecticut, 5. One extra bulb and broken scale, no box.

New York, N. Y., 1. No. 6,338, Dycas; bulb badly dinted; thermometer lost; ten weights lost; all in dirty condition.

New York, N. Y., 2. No. 200, Dycas; bulb badly dinted; stem broken; weights, thermometer and glass cylinder lost.

New York, N. Y., 3. No. 6,342, Dycas; bulb slightly dinted; thermometer, cylinder, and 19 weights lost.

New York, N. Y., 4. No. 6,343, Dycas; bulb dinted, thermometer broken; glass cylinder and seven weights lost.

New York, N. Y., 5. No. 6,341, Dycas; bulb dinted; stem broken; thermometer, cylinder, and two weights lost.

New York, N. Y., 6. No. 6,340, Dycas; bulb dinted; thermometer cylinder, and nine weights lost; dirty.

New York, N. Y., 7. No. 852, Dycas, by Fisher & Son; bulb dinted; seven weights lost.

New York, N. Y., 8. No. 456, Dycas, by Fisher & Son; bulb dinted and dirty; thermometer, scale, and 13 weights lost.

New York, N. Y., 9. No. 200, Dycas, by Fisher & Son; nothing remaining but the box and most of the weights.

New York, N. Y., 10. No. 514, Dycas, by Pike & Son; bulb dinted; thermometer and 20 weights lost.

New York, N. Y., 11. No. 579, Dycas, by Fisher & Son; bulb reduced by dinting to one-half its original size; thermometer out of order, 13 weights lost. *This instrument was in actual use.*

New York, N. Y., 12 & 13. Two Sykes' which had never been used; no thermometer.

New York, N. Y., 14. A lot of extra weights.

Philadelphia, Pa., 1. No. 336, Dycas, by Fisher & Son; bulb dinted; one weight lost; key of box lost.

Philadelphia, Pa., 2. No. 703, Dycas, by Fisher & Son; bulb deeply dinted; in dirty condition.

Wilmington, Del. No. 20, Dycas, by Fisher & Son; bulb dinted; thermometer broken; in dirty condition.

Baltimore, Md., 1. No. 5,841, Dycas, by Gammage; glass cylinder lost; otherwise in good condition.

Baltimore, Md., 2. No. 4,654, Dycas, by Arstall; bulb slightly dinted; glass cylinder and two weights lost.

Alexandria, Va., 1. Dycas, old kind; without thermometer.

Alexandria, Va., 2. No. 1,060, Dycas, by Fisher & Son; bulb dinted; thermometer lost, in dirty condition.

Alexandria, Va., 3. A lot of extra weights and old boxwood scale.

New Orleans, La., 1. Dycas, by Fisher & Son; in good order.

New Orleans, La., 2. Two of same kind, incomplete and worthless. Most of the weights wanting.

The above instruments, when they were collected, were deposited in the office of weights and measures, where they now are. They were subjected to an examination and comparison with each other, to test the accuracy with which they would furnish results, and for this purpose, alcohol of the respective strengths of 80, 50, and 24 per cent. was employed. A large proportion of them it was impossible to examine in this manner, in consequence of lost weights, or some other radical deficiency. Had it been attempted to compare the uncondemned ones, at indications intermediate to those given, it would have failed in many cases, by reason of loss of weights.

The following table exhibits the result of the comparison, showing conclusively the unreliability of the instruments collectively, and the great necessity of withdrawing them from use and substituting for them instruments simple in principle and less likely to become deranged.

No. 2.

Comparison of old custom-house hydrometers, (Dycas'.)

Custom-house, received at.	Mark of hydrom.	80 per cent. alcohol.		50 per cent. alcohol.		24 per cent. alcohol.

NOTE.—To have rendered the above table more complete, I should have had the means of reducing the indications to the standard temperature of 60°, and then found from table XL of McCulloh's last report on hydrometers, (see Sen. Doc. No. 50, 1st session 30th Congress, page 531,) by interpolation, the corresponding values in per cents of alcohol. But as the reduction referred to was not in my power for want of proper tables, the results are presented precisely as obtained. In their present form their want of harmony is readily seen.

3d. Condition of standard weights and measures and their comparison with those in common use.

Sets of standard weights were delivered to the custom-houses in 1836, by the Treasury Department, consisting of the following pieces.

One 1 lb. Troy " 1 " Avoirdupois. " 2 " " " 3 " " " 4 " " " 5 " " " 10 " " " 20 " "	Arranged in one box.
One 25 lbs. Avoirdupois " 50 "	Arranged in one box.

The boxes containing the above weights were provided with fittings for each weight, thus securing them from being misplaced and injured during transportation; the lids being fastened on by nuts and screws. The two boxes were suitably packed together in a strong outer box provided with a lock. With each set was sent a printed copy of the following.

Instructions relating to the use of the standard weights.

1st. Never touch the weight with the hand in any case whatever.

2d. The weights are to be lifted out and in their places, on being moved, by means of the fork or hook, covered with leather, which are added to the boxes for that purpose, and fitting the different weights.

3d. When the weights are taken out of the boxes, they must always be placed upon clean white paper, that they may not become scratched or soiled, as well when placed on the balance as otherwise.

4th. The whole collection must be kept in a safe and dry place, free from all disturbances or danger of damage.

5th. They must never be moved away from under the care of the officer under whose charge they are to any other building or place to make comparisons, but any weights to be compared must be brought to the place of deposit of the standards, to undergo the comparison.

6th. To make a good comparison, the standard weight must be placed in one of the basins of the scales, and in the other must be put any heavy bodies to make exact counterpoise to the same; when thus an exact equilibrium is obtained, the standard weight is removed, and in its stead the weight to be compared is to be placed. Whatever may have *to be added to the weight compared* by so much is it too light; whatever may be needed to *add* to the *counterpoise*, will indicate the weight compared so much too heavy.

7th. That the utmost caution is to be observed in the use of the weights will be self-evident. In all cases the weights must not be left exposed to the open air, when not absolutely necessary.

8th. As the standard weights have all their proper legal weights, it is proper to observe, that in comparing rough weights for common mercantile use there ought always to be a certain allowance made, for the wear of such weights in their use, by an over weight proportioned to the magnitude, the kind of use the weight is intended for, and the usage it may have to withstand, as, after a while, such weights would otherwise too soon become too light and deviate too much from the accuracy that may be wished in them ; by this allowance they remain longer near enough to the desired accuracy, before needing new adjustment.

9th. The value of each weight is marked upon a paper fastened to the bottom of its place in the box, (in preference to stamping it upon the weights,) so that the removal of the weights can never disturb them, the fitting of the weights not admitting of their being misplaced. It is only to be observed that these papers must never be removed.

10th. The boxes are expressly made without locks ; the cover must be lifted up straight, as the brass bars at the sides direct. When the weights are in, the cover must be screwed down tight to its place by means of the four finger-screw knobs.

F.R. HASSLER, *Supt.*

Standard yards were sent to the principal custom-houses in 1840, with proper instructions for their safe-keeping, and mode of use in comparisons. The following are the directions relating to their preservation :

"1st. The standard shall never be touched with the naked hand warm, or in any way damp from perspiration, or otherwise. It is proper not to suffer any dust to collect upon it which could occasion hard rubbing ; any dust is to be removed, in any case, by wings or feathers of a *wild bird*, because they will not occasion any scratches, like the wings of fowls, ducks, &c., would do.

2d. It must not be removed from its place in the box, except for the most important comparisons of metallic measures."

Standard liquid measures were sent to the principal custom-houses in 1842, the following pieces comprising a set :

One gallon, with a glass cover.
" half gallon, "
" quart.
" pint.
" half pint.

To some of the custom-houses of less importance it was deemed unnecessary to furnish more than the one gallon standard. The one gallon was packed in a mahogany box by itself ; the parts of a gallon were arranged together, and provided against rubbing and shifting, by a velvet lining and separate fittings. The two boxes were enclosed together in a strong packing case.

The standard half bushels were adjusted and reported ready for distribution in your report of 1846, but they have not yet been ordered by the Treasury Department to be sent to their destination, with one

exception, which is at New York, forwarded by special request of the collector of the port.

By a law passed in 1799, 5th Congress, 2d session, it was ordered, that the surveyor (of each port of the United States) "shall, from time to time, and particularly on the first Mondays in January and July, in each year, examine and try the weights, measures, and other instruments used in ascertaining the duties on imports, with standards to be provided by each collector, at the public expense, for that purpose; and when disagreements or errors are discovered, he shall report the same to the collector, and obey and execute such directions as he may receive for the correction thereof, agreeably to the standards aforesaid."—(Statutes at Large, vol. 1, p. 643.)

Your instructions rendered it my duty to ascertain the condition of the standards at the custom-houses visited; also, whether the comparisons required by the law just quoted were regularly made. As the existing tariff does not require any measurements by the yard measure, there was no necessity for making comparisons with the standard yard.

Portland, Maine. The standards at the custom-house at this place were in a good condition generally, a few pieces only having slight finger marks, or inconsiderable indentations. The comparisons required by law were made, according to the statement of the surveyor, regularly at the periods presented.

Portsmouth, New Hampshire. The standards here were also in tolerably good order, but no comparisons were made with the weights, as there was rarely any occasion to use the common scales.

Newburyport, Massachusetts. Considering the dampness of the room in which the standards are by necessity kept here, they are in better order than could have been expected. The comparisons are said to be regularly made.

Salem, Massachusetts. With the exception of the gallon, the standards are in good order, and the comparisons are made as required.

Boston, Massachusetts. The yard was found to be very much tarnished, the marks on it being scarcely legible. The other standards were in very good condition. The common scales were adjusted, when necessary, by the maker, who attended to the comparison.

Barnstable, Massachusetts. They were all, excepting the gallon, in perfect order. The business transactions here did not require comparisons to be made.

New Bedford, Massachusetts. The gallon was somewhat corroded; all the other standards were in perfect order. Comparisons are not made, as the scales in use are fitted up once a year in Boston.

Providence, Rhode Island. All the standards here are nearly as perfect as when sent from the office. The comparisons are said to be made.

New Haven, Connecticut. The standards here are, in most cases, in good order, and the comparisons are made as required.

New York, N. Y. The half bushel and the small capacity measures were in perfect order, but the other standards had suffered considerably from rough usage. The comparisons were made twice a year, or as much oftener as was found necessary.

Philadelphia, Pennsylvania. The standards here were in excellent condition, and the comparisons were made very carefully at the times prescribed.

Wilmington, Delaware. Some of the standards here were slightly tarnished, but they were generally in good condition. Comparisons are not made, as there is no necessity for so doing.

Baltimore, Maryland. The weights here are in bad order. The other standards do not require remark. The comparison is made more frequently than the regulation requires.

Alexandria, Virginia. All the standards here are in very bad condition, and require to be re-adjusted before reliable comparisons can be made. The comparison required by law is not made.

GAUGING.

On inquiring into the methods pursued at the different custom-houses, for estimating the capacity and contents of casks containing imported liquors, oil, molasses, &c., I found a great want of uniformity among them, the same process not being followed by the gaugers at any three custom-houses. No allowance is made for differences of temperature, and other irregularities are found. The Treasury Department has accordingly authorized you to investigate the subject, with the view of introducing a uniform system in all the custom-houses of the United States.

Respectfully submitted by your obedient servant,

WOODS BAKER.

Prof. A. D. BACHE,
Superintendent Weights and Measures.

OFFICE OF WEIGHTS AND MEASURES,
December 13, 1851.

SIR: In compliance with your verbal instructions, I visited the custom-houses at Portland, Salem, Boston, New Haven, New York, and Philadelphia, to inquire into the practical working of the hydrometer, recently introduced by the Treasury Department, and have the honor respectfully to report as follows:

At the ports of Portland, Portsmouth and Salem no liquors had been received, and the officers had no occasion to use the hydrometers even once. Of course the instruments were in perfect order.

I was informed by the surveyors, as well as by the subordinate officers using the instruments, at the Boston, New Haven, New York and Philadelphia custom-houses, that the new hydrometers are considered greatly superior to the old ones in point of simplicity, and the only objection which could be urged against them is their fragility, which requires great care in handling; but this was more than counterbalanced by the greater rapidity with which they performed their work. Only two of the instruments left at the above ports have been broken: one at Boston, and one at New York. This is good

evidence of the care taken of them. The "markers" at all these places are well instructed in their use, and perform the operations properly.

The merchants at first complained of the change of system, which no longer admitted of the use of the conventional terms "proof," "second proof," &c., and of the substitution of "per cent.," which confused them in their mixing operations; but they are now generally becoming reconciled to the new system, and the new hydrometers are greatly in demand by the liquor dealers at the large ports.

Very respectfully, yours, &c.,

WOODS BAKER.

Prof. A. D. BACHE, L. L. D.,
Superintendent of Weights and Measures.

APPENDIX No. 8.

Table showing the States, foreign governments, &c., to which balances have been delivered, with those on hand ready for delivery.

	States, &c.	BALANCES			When delivered.	By whom delivered.	Remarks.

Total to foreign governments	4	2	1			

Balances in use in the office of weights and measures.

Description.	When constructed.	Use made of them.
One balance, very large size, 67 inches between the knife edges.	Previous to 1844.	For the adjustment of the bushel and half bushel measures.
Two balances, with the beam, 42 inches between the knife edges.	do	For adjusting weights from 20 to 50 pounds.
Two balances, 30 inches between knife edges.	do	For adjusting weights from 2 to 10 pounds.
Two balances, 15 inches between knife edges.	do	For adjusting small weights.
One small balance, with conical beam	Made in Boston	

Summary of the work on balances for the States.

	Balances.		
	Large size.	Medium.	Small size.
Whole number of balances of the kind constructed for the States completed up to January 1, 1857, inclusive of those presented to foreign governments, loaned, &c.	31	31	35
Of which number there have been delivered to States, &c., (exclusive of Texas, from which the balances were returned,) including one to Oregon	20	16	16
Presented to foreign governments by authority of Congress or Treasury Department	4	2	1
Total delivered*	24	18	17
On hand in the office, ready for delivery upon application to the States, including those loaned by authority, and to be returned	7	13	18
Sum of those on hand and delivered	31	31	35
Number yet to be constructed to complete the 35 sets for the States ordered by Treasury Department, and to replace those presented to foreign governments	7	4	.....

* Including two for the Mint, and one deposited at the Treasury.

APPENDIX No. 9.

List of States and custom-houses to which standard weights, measures, and balances have been delivered, December 31, 1856.

A indicates the set of weights allowed to States.
B indicates the set of weights for custom-houses.
G indicates the gallon measures.
P indicates the parts of the gallon.
H indicates the half bushel.
Y indicates the yard measure.

DECEMBER 31, 1856.

APPENDIX No. 11.

Circulars to Governors of States asking for copies of laws.

[Circular.]

OFFICE OF WEIGHTS AND MEASURES.
Washington, D. C., July 29, 1853.

SIR: It is very desirable to obtain for the files of this office copies of all laws enacted by the several States of the Union, in relation to standard weights, measures, and the gauging of casks; I have therefore the honor to request that you will favor me by causing copies of all such laws as have been enacted by the State of ———, since March, 1819, together with the laws and regulations now in force, to be sent, addressed to me at this office, under cover to the Hon. James Guthrie, Secretary of the Treasury.

Any other information in relation to the subject, which it may be in your power to furnish, will be received with pleasure.

Yours, very respectfully,

A. D. BACHE,
Superintendent of Weights and Measures.

His Excellency the GOVERNOR
of the State of ———.

[Circular.]

OFFICE OF WEIGHTS AND MEASURES,
Washington, D. C., June 12, 1856.

SIR: To complete the files of this office, it is desirable to obtain verified copies of laws which may have been passed by the legislatures of the several States of the Union, and approved in relation to standard weights, measures of length and capacity, and the gauging of casks.

The records now contain copies of acts relative to weights and measures and gauging, passed in the legislature of ———, prior to and including that approved ——— 18—, which were transmitted to this office by the executive, on my application therefor, in 1853.

Yours, very respectfully,

——— ———,
Superintendent of Weights and Measures.

His Excellency the GOVERNOR
of the State of ———.

[Circular.]

OFFICE OF UNITED STATES WEIGHTS AND MEASURES,
Washington, D. C., September 26, 1856.

SIR: Since the issue of the circular letter which I had the honor to address to your Excellency in June, requesting copies of recent laws

relative to weights and measures which may have been passed by the legislature of the State of ———, a resolution was adopted in the Senate of the United States calling for a detailed report from the Superintendent of United States Weights and Measures, to be presented in December next. The resolution referred to requires a statement of the substance of all laws enacted in relation to weights and measures, by the several States of the Union; and I would therefore respectfully request to be furnished with verified copies of any acts which may have been approved by the executive of ——, since —— 18—. The legislation bearing on the subject of weights and measures, and that relative to gauging, prior to that date, is now on file in this office.

Very respectfully, yours,

A. D. BACHE,
Superintendent U. S. Weights and Measures.

His Excellency the GOVERNOR OF ———

APPENDIX No. 12.

Titles of laws passed by the several States of the Union in relation to weights and measures during the period intervening between the years 1819 *and* 1854, *with a statement showing their authenticity.*

MAINE.

[A copy of the laws on the subject subsequent to 1841 was received from Governor W. G. Crosby, with letter dated Belfast, Maine, November 16, 1853. The laws previous to that date and subsequent to 1820 were copied in the libraries of Congress and of the State Department, both copies being at the expense of this office.]

Laws regulating weights and measures, approved February 5, 1821. Revised Statutes, chapter 131.	1821

Of shingles, clapboards and staves, approved March 26, 1821.	1821

Resolve authorizing the State treasurer to suspend the purchase of a standard of weights and measures. Passed February 6, 1822; chapter 27. 1822

Of shingles, clapboards and staves, approved February 12, 1824; chapter 66. 1824

An act regulating the weight of hoops, staves, and other articles, approved February 25, 1828; chapter 404. 1828

Resolve authorizing the State treasurer to purchase a standard of weights and measures. Approved March 22, 1831; chapter 47. 1831

Of beef and pork, approved February 27, 1832; chapter 50. 1832

Of potatoes, approved March 23, 1835; chapter 101. 1835

Of measures of salt, corn and grain, approved March 4, 1836; chapter 71. 1836

Of the standard weights of ruta baga, sugar beets, mangle wurzel, and rye, and Indian meal, approved April 2, 1836 and February 24, 1838; chapter 72. 1836 1838

An act additional to an act for the due regulation of weights and measures, approved March 2, 1839; chapter 375. 1839

Of lime and lime casks, approved March 22, 1839; chapter 184. 1839

An act to regulate the sale of oats, chapter 228.

Of fish, approved March 22, 1839; chapter 91. 1839

Of hair, chapter 46.

Of weights and measures, act of July 31, 1841; chapter 73. 1841

NEW HAMPSHIRE.

[A bound volume of the compiled statutes of the State was received, accompanied by a letter from the Hon. John L. Hadley, Secretary of State, and dated Concord, N. H., September 22, 1853. Manuscript copies of the original laws of 1828, 1840, and 1848 were obtained at the Congressional and State Department libraries.]

An act regulating the weighing of merchandise and other commodities, approved July 6, 1827; Rev. Stat. chapter 1. 1827

An act in addition to an act entitled "An act regulating scale beams, steelyards, weights and measures." Approved December 29, 1828; chapter 2. 1828

Resolution by the senate and house of representatives in general court convened in relation to the United States standard weights. Approved December 17, 1840; chapter 591. 1840

An act in amendment of chapter 110 of the Revised Statutes relating to weights and measures, approved in 1848. 1848

Measurers of grain, how chosen, their duty and their fees; sealed measures to be used; penalties for fraud of measures and selling without measures.

Standard weight of oats and of potatoes; mode of measuring; bread to be sold by weight; weight of bread regulated; penalty for unlawful sale of bread.

Standard weights and measures for the State, how kept; county sealers, how appointed; their duties and fees. Each 1849

town to be provided with a set of standard weights and measures; town sealer of weights, &c., how chosen; his duties and fees; size of measures for charcoal, and articles sold by heaped measure. Penalty for using weights and measures not sealed or unjust. Penalty on selectmen for not providing a set of standard weights, &c., for town. Weights and measures, how sealed. "Hundred weight" means one hundred pounds. Weighers to weigh accordingly. Penalty for weighing illegally. Suits not to be commenced until notices. Laws of 1848, chapter 702. Approved January 1, 1849. 1849

VERMONT.

[A copy of chapter 73, of the compiled statutes of Vermont, was forwarded to this office by the Hon. Pliny H. White, Secretary of State, with a letter dated St. Johnsbury, Vermont, September 20, 1853. Copies of additional laws, passed by the State in 1816, 1824, 1828, 1830, 1831, and 1842, were obtained from the above mentioned libraries.]

Acts in relation to weights and measures. Passed November 6, 1816. 1816

The above is repealed by the second section of the act passed October 27, 1828. 1828

Act in relation to weights and measures. Passed November 18, 1824. 1824

An act in addition to an act relating to weights and measures; passed March 8, 1797. Passed November 9, 1831. 1831

An act in addition to chapter 69 of the Revised Statutes. Approved November 1, 1842. 1842

An act adopting as state standards the United States standard weights and measures. Chapter 73, of compiled statutes of Vermont.

An act relating to the standard weight of potatoes, passed in 1852. 1852

An act prescribing the standard measurement of wood and bark, passed in 1855.* 1855

MASSACHUSETTS.

[Manuscript copies from the revised statutes of November, 1835, were received from the secretary of State. These copies included, besides extracts from chapters 28 and 30 of the above statutes, resolves on the subject of weights and measures, approved April 20, 1847, and acts passed in 1847 and 1851, respectively. Copies of laws passed in 1835, '37, '43, '46, '52 and '53, were obtained from the libraries of Congress, and of the State Department.]

Resolve concerning the standard weights and measures in the Treasury, October 30, 1835. Chapter 117. 1835

Of charcoal boxes and baskets. 1835

APPENDIX No. 13.

Letter of E. R. Potter, esq., of Providence, Rhode Island, giving a brief account of the legislation of that State prior to 1819.

OFFICE OF COMMISSIONER OF PUBLIC SCHOOLS,
Providence, R. I., November 14, 1853.

SIR: The governor referred to me your letter requesting information as to the laws of the State of Rhode Island upon the subject of weights and measures and gauging since 1819. Herewith I send copies of all of them.

As Mr. Adams' report on weights and measures contains no information as to the laws of Rhode Island upon these subjects, the following memoranda may be interesting:

In the code of laws of 1647 it is enacted that "the measure shall be one and the weight one throughout the whole colony, and that every town shall have a common balance and weights and a common measure that every person may measure and weigh thereat, 12 H. 7, 5, see 9. H. 3, 26; and that every town be careful in the observance thereof. Furthermore it is agreed that whosoever shall use false weights and measures which are not according to the standard shall forfeit, &c., &c., 1 H. 7, 4," The references are intended to refer to the statutes of England.

* Certified copy sealed October 7, 1856.
† Certified copies sealed November 28, 1856.
‡ Certified copy sealed December 17, 1856.

By an act of March 1, 1663, it was enacted that a general sealer, &c., should be annually chosen, who should procure, at the colony's charge, a half bushel, peck, half-peck, ale quart, wine quart, wine pint, wine half pint, a yard and weights, which shall be according to the standard of his Majesty's exchequer in the kingdom of England. Towns were also to procure suitable standards.

An act was passed May, 1698, providing penalties on such towns as did not procure standards and have them sealed by the general sealer.

In February, 1728, the act of 1663 was substantially re-enacted.

By act of June, 1731, the assize of barrels was fixed at thirty-one gallons and a half.

The digest of 1767 contains an act fixing the measure of fire-wood the same as at present.

By an act of June, 1751, re-enacted in 1767, the subject of gauging was regulated. It was to be done "by Gunter." And by the act of 1767 the rule for finding the mean diameter is established "by multiplying the difference between the head and bung diameter with 0.65, and adding the product to the head diameter, or, which is the same otherwise expressed, by adding sixth-tenths and a half of the difference between the bung and head to the diameter at the head."

By an act of October, 1784, it is recited that Indian meal has been heretofore sold at fifty pounds to a bushel, and it is ordered to be sold hereafter at fifty-four pounds. Re-enacted in 1798.

The laws regulating the assize of lime casks and beef barrels I have passed over. There are among the ancient laws some regulating the assize of bread.

Very respectfully, your obedient servant,

E. R. POTTER.

Professor A. D. BACHE.
Superintendent of Weights and Measures.

APPENDIX No. 14.

Table showing the weight of a bushel of different grains and other substances, as established by law, in the different States—in pounds, avoirdupois.

APPENDIX No. 15.

Circular to the Ministers of the United States to England, France, the Netherlands, Prussia, and Belgium, asking for information in regard to the methods of gauging officially practiced in those countries, and correspondence in relation thereto.

OFFICE OF WEIGHTS AND MEASURES,
Washington, February 7, 1851.

SIR: It has been rendered my duty, by the Secretary of the Treasury of the United States, to prepare a report as a preliminary step to the introduction of a uniform system of gauging in the custom-houses of the United States. To render the report thorough, it is necessary to give a sketch of the history of the art, to give an account of the different processes which have been used, and are now in use in foreign governments, and the scientific bases upon which they are founded. As the readiest and most effective mode of acquiring the requisite information, I have thought it best to apply to the representatives of the United States at the different European courts, and through them to the authorities having the system of gauging under their control.

I would be much obliged to you if you will procure and forward, addressed to the Superintendent of Weights and Measures, at Washington city, at your earliest convenience, and by the speediest conveyance, copies of such laws and regulations in relation to the measurement of the capacity of casks, and the determination of their contents, as may be now in force in the government to which you are a representative, together with descriptions of the processes which have been and are now used, and whatever books and instruments are used by the gaugers employed by the government.

Any other information which it may be in your power to procure in relation to the matter would be most thankfully received. The Treasury Department has authorized a reasonable expenditure for the object, and payments not exceeding fifty dollars made for books or instruments will be refunded.

Very respectfully, yours, &c.,

A. D. BACHE,
Superintendent Weights and Measures.

Hon. ABBOTT LAWRENCE, *London, England.*
Hon. WILLIAM C. RIVES, *Paris, France.*
Hon. GEORGE FOLSOM, *Hague, Netherlands.*
Hon. D. D. BARNARD, *Berlin, Prussia.*
Hon. T. G. CLEMSON, *Brussels Belgium.*

APPENDIX No. 15. (1.)

Papers received from the Hon. Abbott Lawrence, United States minister at London: 1. *Letter of Thomas Memanter, esq., of the board of customs, London;* 2. *Memorandum by R. Troughton, esq., chief officer of the gauging department of the customs.*

BOARD OF CUSTOMS,
London, March 26, 1851.

DEAR SIR: I enclose a memorandum by the chief officer of the gauging department in the customs which will afford some information to Mr. Lawrence in reply to his enquiry. I send also a copy of the instructions placed in the hands of our gauging officers on their appointment. Mr. Troughton refers to a work, "Symond's Practical Gauger," which Mr. Lawrence will be able to procure, and he can also obtain a set of gauging instruments if he desires it.

But as gauging is an art as well as a science, the mysteries thereof can only be learned by practical experience, and I can only offer, if Mr. Lawrence should think it worth while to direct one of his officers to come over from the United States to London, to have him placed under instructions, and formally instructed in the mode adopted in this department for ascertaining and recording the quantities of casks and the strength of spirits liable to duty.

I am yours, very faithfully,

THOS. MEMANTER.

W. H. STEPHENSON, Esq.

The present English gallon is fixed by act of Parliament to be equal in bulk to 10 lbs. of distilled water at 62° Fah., and contains 277,274 cubic inches, (353.03 cylindrical inches.)

Our method of ascertaining the capacity of a cask by gauging, founded upon this data, is, first to reduce it to a cylinder, by finding the difference between the head and the bung diameters, which difference is multiplied by 0.7, upon the principle that a spheroid occupies two-thirds of its surrounding square, and that product, added to the head diameter, gives the mean diameter of a cylinder of the same capacity as the cask. The square of this mean diameter multiplied by the length of the cask, and the product divided by the circular divisor 353.03, gives the capacity, or full contents in gallons.

To ascertain the dimensions, we make use of rules or gauging instruments, viz: the long callipers, to find the internal length of the cask; the cross callipers, to find the internal horizontal diameter; the bung-rod, to find the perpendicular diameter; and the head rod, to find the diameter of the two heads. The last rule is also made use of to reduce the cask to a cylinder, and to find its full and ullage contents; and prevents the necessity of working them out by figures.

The first operation in gauging is to take the diameter of the two heads with the slide on the head rod, and the mean of the two is marked down as the head diameter. The bung diameter is next ascertained by taking the mean of the horizontal and perpendicular diame-

ter for the true bung diameter, and the length is then taken and marked down. These three dimensions—length, head, and bung diameters—being thus found, the reduction of the cask and the casting out of its capacity by the head rod are the next operations.

Upon the upper part of the face of the head rod is inscribed a Gunter logarithmic line ranging from 25 to 400, and upon the upper line of the slide is a corresponding line of square roots, commencing at 18.79, which is termed the "gauge point," being the square root of the cylinder divisor 353.03, and implies that a cylindrical vessel one inch deep and 18.79 inches in diameter holds exactly one gallon. In the middle of the slide, to the left, is a line called the spheroid line, so divided as to take two-thirds of the difference between the head and bung diameters as the mean difference. The bottom lines of the slide and face are lines of inches.

The upright piece of brass upon the slide is to be placed to the head diameter, in the lower line of the rule; and the number on the spheroid line directly over the bung diameter, also on the lower line, shows the number to be added to the head diameter for the mean diameter of the cylinder required. The gauge point on the slide is then to be placed to the length, upon the upper line of the rule, and upon the same line, directly over the mean diameter, on the top line of the slide, is the full contents or capacity of the cask in gallons and fractional parts of a gallon, which fractional parts of a gallon, by our regulation, are not carried to account.

The spheroid line is calculated for the middle frustrum of the finest mathematical figure of an elliptical form, and, as almost all casks vary from this both in figure and thickness, it is necessary to make allowances upon the length to meet the deviations from the spheroid; otherwise, the result would be very erroneous, and, as no fixed rules or laws can be laid down for such allowances, the art of gauging is thereby rendered difficult, and can only be acquired by constant practice and a perfect knowledge of the various forms of casks imported from different countries. It would therefore be advisable, to obtain a correct judgment in gauging, that a competent person should be placed in communication with our gaugers, to be fully instructed in the use of the rules and the more abstruse parts of gauging, such as the method of ascertaining the mean bung and length dimensions, upon which accuracy so much depends.

The next process in gauging is to ascertain the ullage quantity in the cask. This is done by fixing the brass upon the bung rod to the mean or true bung diameter and dropping it perpendicularly into the bung-hole. The number of wet inches will be shown upon the rule when the perpendicular diameter exceeds the horizontal; but should it be the reverse, the same number of tenths of an inch must be added to the wet shown upon the rule as when added to the perpendicular diameter to make the mean bung diameter. Then upon the back of the head rod, which has three lines cut upon it: one on the top, marked A, and two on the side, marked B and C; also upon the bottom of the rule is a line, termed the segment line, *lying*. The first three lines are a double range of a Gunter logarithmic line from to 100.

To cast the ullage, place the bung diameter on the lower line of the slide marked C to the 100 on the segment line, and under the wet inches and tenths upon the bottom line of the slide will be given the segment for the same segment line. Place the segment number thus found upon the top line of the slide marked B to the 1,000 on the top line of the rule marked A, and under the full contents of the cask, on the same line, will be given the ullage quantity required on the line B.

The duty upon spirits is charged at proof, which is fixed, by act of Parliament, to be of the specific gravity of 92.30 at 57° Fah., or twelve thirteenth parts in weight of an equal bulk of distilled water at that temperature. The actual strength of spirits is ascertained by an instrument termed Sike's hydrometer, which consists of a float and nine weights, giving a range of strengths from 70 per cent. over proof to water, and subdividing it into 500 equal parts; a thermometer, and a table book of concentrated strengths calculated from 30° to 80° of temperature.

Gauging being an art, there are no custom laws regulating it except the two acts before mentioned fixing the size of the gallon and the specific gravity of proof spirit, and also an act prohibiting the importation of spirits in casks of less capacity than twenty gallons.

The gauging rules and spirit hydrometer can be had of Messrs. Dring & Fage, who make for the customs; or of most other opticians; and the last edition of W. Symond's Practical Gauger is a very useful book upon the subject.

R. TROUGHTON, *Inspr.*

CUSTOMS, *March* 4, 1851,
London.

NOTE.—With the above papers came a set of gauging instruments, described above; a copy of the "Excise Officer's Manual;" a copy of "Instructions for the Gaugers;" "Directions for Gauging and Tabulating Distilling Utensils;" "An act for ascertaining and establishing uniformity of weights and measures, 17th June, 1824;" "Table of the areas of circles in imperial gallons to all diameters," &c.; and an octavo volume of Laws Regulating the Excise.

APPENDIX No. 15. (2.)

Letter received from the Hon. George Folsom, Chargé d'Affaires at the Hague, enclosing one to him from M. Van Borp, Minister of Finance of the Netherlands.

LEGATION OF THE UNITED STATES TO THE NETHERLANDS,
The Hague, June 24, 1851.

SIR: I had the honor to recieve your letter of February 7th last, requesting me to make inquiries relative to the system of gauging practised here. Having taken an early opportunity to converse with the minister of finances on the subject, to facilitate the matter, I

obtained permission to address him directly by letter, instead of using the customary mode of employing the mediation of the minister of foreign affairs. But, after all, I fear you will think there has been unnecessary delay, as I have not received until now an answer to my letter, which was chiefly a transcript of yours to me. The truth is, as the minister of finances acknowledged to me a few days ago, this government has no systematic mode of gauging, each of the gaugers having his own process of arriving at the desired result; based, however, as you will perceive from the minister's letter, on mathematical principles.

The instruments received are two areometers and a still gauge, or scale, which I must forward by a sailing vessel from Rotterdam, as it would be difficult to pass them through the English custom-house. The letter I forward with this as received, preserving a copy. If I can do anything more to promote your views please inform me.

Very respectfully, your obedient servant,

GEO. FOLSOM.

A. D. BACHE, Esq.,
Superintendent of Weights and Measures.

Translation of letter to Hon. G. Folsom.

THE HAGUE, *June* 19, 1851.

SIR: I have had the honor, M. Chargé d'Affaires, to receive your letter of the 27th of March last, in which you request of me certain information relative to the gauging of casks, &c., in the Netherlands.

This sort of gauging has always been considered as an object sufficiently important to merit the attention of government, but at the same time it has been shown that it was very difficult, not to say impossible, to prescribe general instructions for its guidance. A provisional instruction was issued on March 15, 1806, compiled from the work of Professor Lulofs, but which cannot be applied to all kinds of casks appertaining to commerce; besides, by the introduction of the metrical system of weights and measures which is now in use in this kingdom, this provisional instruction has become altogether without object.

The difficulty of comprising in a general instruction the mode of gauging all the casks and barrels which present themselves in commerce, and the different sorts of gaugers which would be necessary, has resulted in this that, since 1812, all that relates to this part of the public business has been entrusted to special employees named gaugers, who, before obtaining their commission, undergo a scientific examination, in order to prove their knowledge of arithmetic including algebra and mathematics, and their skill in using all kinds of gauges; besides, they have to possess some slight acquaintance with physics. Thus having the necessary scientific knowledge, they seize the practice quite readily of obtaining by means of a gauge the capacity of casks both regular and irrregular.

To prove the degree of density of liquids, two kinds of areometers are used, one of which is for liquids lighter than water, and the other for liquids heavier.

I do not consider it necessary here to enter into much detail in relation to the manner in which these areometers are constructed. Suffice it to say, that the one for liquids lighter than water is based upon the number 144, which is divided into degrees from 0° to 36°.0° is the specific weight of distilled water at the temperature of 55° Farenheit, and 36° that of pure alcohol. These degrees may be readily reduced to specific weights by calculation.

I should here add, that these areometers are constructed in such a manner that the thermometer is attached to them; and the administration has caused tables to be prepared indicating the influence which the difference of the degree of heat has upon the degree of immersion of the areometer. The scale of the areometer is divided into 200 degrees, the areometer marking 100 degrees at a temperature of 55° Fahrenheit, which indicates that in the liquid, distilled water and pure alcohol are found in equal parts.

The areometer for liquids heavier, as syrup, &c., is based upon the number 100, but the calculations are the same.

You will find herewith a gauge of the mode which the employés of the administration use generally, also a sample of each kind of areometer above referred to.

Please accept, M. Chargé d'affaires, the assurance of my very distinguished consideration.

VAN BORP.
The Minister of Finance.

APPENDIX No. 15. (3.)

Papers received from the government of Prussia, comprising a translation of the official instructions for gauging casks, by M. Van Düesberg, Minister of Finance, with table.

Translation of instructions for gauging casks.

§ 1. When the gauging officers are requested to gauge casks intended for wine, alcohol, beer, vinegar, or other liquids, their capacity is to be determined *in all cases* by the weight of the quantity of water that will fill them: for this purpose the following process is to be observed.

§ 2. Only such casks are admitted to be gauged, as are irreproachable in solidity of construction, well hooped, and clean of every foreign matter inside. The gauging officers have to examine into this carefully, and refuse all casks not fulfilling these requisitions.

§ 3. For filling, ordinary river, pond, or well water is to be used; the weight of the water is found by determining the weight of the empty cask, also when it is full, subtracting the first weight from the second. The filled cask must not be weighed until the water has been

in it at least two hours. Immediately before proceeding to take the weight, the gauger must ascertain whether the cask is completely filled; should this not be the case, the necessary quantity of water must be added. Directly after taking the weight of the full cask, the temperature of the water by Reaumur's scale is to be determined and noted. It suffices to ascertain the weight of the filled vessel to the eighth of a pound, if it contain less than 100 quarts, and within a fourth of a pound if more. (Compare § 4.)

§ 4. From the weight of the water filling the vessel to be gauged, its contents in quarts is next computed by means of the subjoined table, in the arrangement and use of which the following has to be observed.

In order to avoid filling with distilled water, upon which are based the legal weight, and its reduction to cubic inches, the mean specific gravity of river and pond water, as well as of common well water, have been determined by careful experiments, in which the changes of temperature were taken into consideration. A table is subjoined, giving the data for both kinds of water, and at the various temperatures from 0° to 25°, Reaumur.

Column A gives the weight of a quart of water weighed in the open air.

Column B, the cubic contents of a pound of water expressed in fractions of a quart.

When the weight of water filling a cask to be gauged has been found, and the degree of temperature, Reaumur, the volume of the cask's contents in quarts is found by means of the number corresponding to the degree of temperature in the proper column of the table, according as river or well water has been used—dividing the number given in column A, by the weight of the water, or multiplying the number in column B by the same weight. The fractions of quarts are only considered for vessels of less than 100 quarts; for larger ones they may be neglected when they amount to only one half-quart or less; they are reckoned for the whole quart when more than half.

The following is an example of the computation. Suppose a vessel to have been weighed when filled with water at 10° Reaumur, and the weight of the water to have been found = 496.75 lbs; the table gives for well water opposite to 10° Reaumur, in column A, the number 2.4457, and in column B, 0.4089. The first makes the capacity of the caks $= \frac{49675}{24457} = 203.11$ quarts; the second, $4.9675 \times 4089 = 203.12$ quatrs. Neglecting the fraction after the decimal point, as it is smaller than 0.5, the capacity by both methods of calculation is to be set down as 203 quarts.

§ 5. The capacity in quarts found by the preceding method is to be branded in legible figures upon the head of the cask gauged, also the mark of the gauging officer, with the name of the place, and the year, and a voucher in the prescribed form is to be delivered to the officer who ordered the gauging.

VON DÜESBERG,
Minister of Finance.

BERLIN, *April* 3, 1847.

Table to determine the capacity of casks in quarts by means of the weight of water filling them at different temperatures.

APPENDIX No. 16.

Letter of M. Moreau, Sub-director of International Exchanges, transmitting a complete collection of standard weights and measures as a present from France to the United States.

AGENCE CENTRALE DU SYSTEME D'EXCHANGE INTERNATIONAL,
56 RUE DE CLICHY, *Paris, April* 20, 1852.

SIR: I have the honor of informing your excellency, that I will forward to the President of the United States, by the steamer Humbolt, on the 9th of May next, a complete set of standard weights and measures of France.

This collection is presented by the minister of commerce of France, in the name of the government, to the government of the United States, in return for the splendid series of standard weights and measures so generously voted by Congress by the bill dated June 30, 1848, to be presented through me to the French Republic. I need not say, sir, that the collection was received with the warmest feelings of brotherhood and gratitude. The precious instruments that I forward

to the President, are the best guarantee of the sympathy felt, in every moment, by France for the United States.

As illustrations of this collection, I have the honor of sending herewith to your excellency the report made to me on my request, by Mr. Sibermann, superintendent of the conservatory of arts and trades, to whom was entrusted the care and examination of the collection.

In this report, M. Silbermann relates the experiments made by himself, upon the weights and measures presented by the United States, gives the historical account of the adoption by France of the metrical system, and explains, in their smallest details, all the standards presented by France.

He concludes by saying, that his earnest hope is to see the American people adopt a system which will put an end to the troubles of commerce, and greatly co-operate to cement the bonds of fraternal feelings which have united for a long time our two respective countries.

Indeed, Mr. Secretary, I consider the reciprocal presentation of these two magnificent collections as the most glorious result of my system of international exchange.

Before concluding, sir, allow me to offer anew to your excellency the expression of my gratitude for your constant kindness towards me, and to assure you, that I will always do everything in my power to prove myself worthy of the confidence the American people have deigned to place in the humble advocate of a great cause.

Hoping, sir, that I have been agreeable to you, in fulfilling what I considered my duty, as agent of the United States, I have the honor to be, with great respect, sir, your excellency's most grateful and obedient servant, (for M. Vattemare, at present in Holland and Belgium,)

MOREAU, *Sub-director.*

His Excellency, THE SECRETARY OF THE TREASTRY
of the United States.

APPENDIX No. 17.

Letter of M. Silbermann, superintendent of the Conservatory of Arts and Trades of France, to M. Alex. Vattemare, agent of International Exchanges, in relation to the standards of the United States and France.

PARIS, *March* 6, 1852.

DEAR MR. VATTEMARE: In answer to your request relative to my opinion concerning the weights and measures, and the instruments of weighing and measuring, you have entrusted to me for the Conservatory of Arts and Trades, one of the results of the system of international exchanges, of which you are the founder, and which has led to the execution of weights and measures, destined to be presented through you to the government of the United States, in the name of France, I feel impelled to subjoin some information relating to them, in view

of the fact, that the greater part of them have for a long time been exhibited to the public in our gallery of weights and measures, side by side with the splendid collection which you have presented to us.

In the first place, I will communicate to you the opinion of connoisseurs, and I beg of you to believe that each instrument has been well examined and well appreciated. This opinion is, that all these articles are of an irreproachable execution; the two balances particularly are the object of universal admiration. Public opinion cannot go further. In testimony of the esteem in which I hold these balances, I cannot say more than that I used the small one to adjust the platinum kilogramme, which was exhibited at the World's Fair, in London; it is very delicate and especially most constant. I was able to make all my weighings with certainty to within half a milligramme. The form adopted for these balances is at once simple, well adapted to use, and distinguished by that taste which is only to be found in instruments made by master hands. These are justly to be termed instruments of precision.

What I have just said with regard to the small balance I may repeat with still more propriety respecting the large one; it is not inferior to the former in precision. In fact, I have tested it with 10 kilogrammes in each scale, and it promptly indicates a difference of one half a milligramme between the two weights, that is to say, one unit in twenty millions, in each scale. I have been obliged several times to repeat this experiment in the presence of incredulous persons, and it has always given the same result. What is most gratifying to me in the construction of these balances is the system adopted in the United States, which consists in preventing the oscillation of the balance and causing it to cant as soon as the equilibrium is destroyed; the weighings are effected very rapidly, and, as it has been seen, with as much precision as can be obtained with the most carefully made balances. For my part, I have ever regretted that all our balance makers have hitherto declined the adoption of this system. They assign, as the reason of this reluctance, that with an oscillating balance they can replace the small weights by arcs of oscillation, which enables them to estimate much smaller fractions of the milligramme. As for myself, I am inclined to believe that as much precision may be arrived at in one system as in the other, and in that case there will be a great gain of time in the system of canting. Moreover, I know from experience what confidence is to be placed in weights estimated by arcs; in spite of the utmost care, the above mentioned very small arcs are variable; and while they flatter us with the hope that we have obtained tenths of a milligramme, they cause us to commit, unwittingly, errors of more than one or two milligrammes.

I beg, however, to be permitted one observation, not upon the construction of these balances, but upon the manner of weighing in general. It is, that in the comparisons of standards the beam ought not to be lowered in reloading; the balance should remain fixed, the basin to be unloaded should be mechanically held in its position of equilibrium, and the weights should be taken off and replaced without any shock; then we are perfectly certain of an absolute regularity in the comparison. It is the method I employ in such cases. This re-

gularity depends upon the knife-edges experiencing no displacement between the two weighings. Also, in order to use the method of the double weighings, or of Borda, in a simple manner, which allows me to control the reading of the weights, I proceed as follows: The basins are always loaded with the same weight, which is the largest unit that the balance will bear, say one kilogramme for balances of that capacity. I commence by verifying the copper counterpoise, which holds in equilibrium the standard kilogramme; then replacing that standard by the body to be weighed, and completing the equilibrium by marked weights taken from another kilogramme, very exact but subdivided, there will remain out of the scale precisely the weights replaced by the body to be weighed. I read them and have the weight of the body. On the other hand, if I subtract from one kilogramme the amount of the weights placed in the scale, I shall find the same weight again, if my readings have been faithful, if not, I am made aware of it in time, and I correct with accuracy. It is only from time to time that it is necessary to verify the exactness of the counterweight, and in successive weighings. In this way the double do not require much more time than the single weighings.

I have been highly pleased with the form given in the United States to the small weights. To represent polygons with wire of a convenient size, and having a number of sides equal to the figure expressed by those weights in units, is a very happy idea, which secures from false readings; we need no magnifying glass to distinguish a pentagon, which signifies five, from a quadrilateral, which represents four, from a triangle, or three, from an angle V, the two legs of which indicate two, and finally, from the single straight wire, making the unit. This form will certainly be appreciated in France; as for myself, I will do everything in my power to have it adopted by law, instead of the ancient form, which is subject to many errors, known only to those who use it often.

I have observed with pleasure even the hooks lined with buff to take up the weights without rubbing them; and the pincers also, lined with the same material, to take up the troy weights, have been used by me to take up the platinum kilogramme during its adjustment. I consider all these minute precautions, as the true stamp of the scrupulous experimenter.

As to the exactness of the weights and measures, what I have seen is to me a sure guaranty.

One point more—I allude to the alloyage adopted in the United States. I shall do my utmost to cause the brass employed in France in the fabrication of weights and measures to be of the same standard as that in the United States, and free from all hammering or rehardening whatever, simply cast, and as uniformly as possible, so as to have, like theirs, the least differences in the density and expansion of materials used. This necessity has long been felt, but it has not yet been sanctioned by law, as has been done in respect to the alloy of tin and lead, which forms the measures for capacity of liquids, for the verification of which a hydrostatical balance has even been made, as you will perceive in the list of the French articles which will be remitted to you.

Looking at the yard standard, I was at first quite amazed; it is divided in decimal parts. I thought I recognized decimeters and centimeters; but, unluckily, its total length is not quite that of the metre, it wants about eight centimeters and a half. Let Americans soon add them, and the two hemispheres, after having wisely adopted the decimal system, will soon be possessed of the uniform metrical system. The people of the United States, in such a good course should not stop. Allow me to justify my hope, with the example given by France to the whole world. They should listen to the history of the past, and of the enormous sacrifices made by France to obtain this laudable end.

The small degree of sympathy which existed formerly between the different States of the globe, the exclusiveness of each as regards all the rest, that unreflecting self-love which desires to command others, rather than accept their counsels, sacrificing even interest to vanity; all these causes tended to make each people, cloistering themselves, nay, fencing themselves in, insist upon having their own peculiar weights and measures. They cared but little for the annoyances of commerce in international transactions that were little known, and in fact of small extent. But this extravagant fondness for self regulation was not confined to the larger States; different provinces, even neighboring cities of the same nation were in perpetual rivalry with each other, and, whenever they could do so, assumed the power of nationalities, and decreed their own weights and measures. Why, then, in such a state of things, should not each individual take the same liberty, and construct his measures in accordance with his own interest? Imagine, if you can, the misreckonings experienced by commerce in such a relation of mutual interests, and such a profusion of measures of every kind. In the adjustment of imposts, the same difficulties were experienced, and the custom-house, that vidette on all frontiers, must have had many confused pages of records previous to the comparison of the various measures after they had been determined and legalized by the different States.

France, tired sooner than other nations of these divisions, which with her were even greater than elsewhere, formed at once a great resolution, the complete reformation of her weights and measures. This happened in 1790, at the very moment of her great political reformation. Accordingly, the constituent assembly, on the motion of Talleyrand, one of its members, ordered the Academy of Sciences to found a metrical system, based upon nature, and suitable for acceptance by all nations.

The academy fixed the unit at the millionth part of the quarter of the terrestrial meridian.

It adopted a provisional metre, deduced from the measures of the meridian, which, long before, the geometer Lacaille had measured in Peru; and, for greater certainty, ordered the measuring of the meridian passing through France, extending from Dunkirk to Barcelona, and which could be and was afterwards prolonged northward through England and Scotland, and from the Isle of Wight, southward, through Spain to the island of Formentara. This meridian

was not selected because it passed through France, but because it was in Europe the longest meridian that could be chosen, not distant from France, and of which the two extremities might rest on the level of the sea. That gigantic work, accomplished in the midst of a revolutionary storm, was not to be the selfish work of France; such was not her desire. The provisional government invited foreign nations to co-operate in the definitive work by assembling a universal congress composed of the most illustrious learned men of each country.

This commission of weights and measures comprised the following gentlemen, viz:

Berthollet, Borda, Brisson, Coulomb, Darcet, Delambre, Haüy, Lagrange, Laplace, Lefevre-Gineau, Legendre, Mechain, Monge Prony, and Vandermonde, members of the Institute of France; Æneæ and Van Swinden, sent by the republic of the Netherlands; De Balbo, by Sardinia; Bugge, by Denmark; Ciscar and Pedrayès, by Spain; Fabbroni, by Tuscany; Franchini, by the Roman republic; Mascheroni, by the Cis-Alpine republic; Multedo, by the Ligurian republic; Trallès, by the Swiss confederation; Vassalli, by Piedmont; Lenoir, a French artist, who executed the metre and the apparatus relating to it, and Fortin, also a French artist, author of the kilogramme and its apparatus.

Lavoisier, Tillet, and General Meunier, also took an active part in these operations, though unfortunately for but a short time.

This illustrious commission received the work already accomplished, and, after minute verification and comment, deduced from it the new system, thanks to the untiring zeal of some of its members, such as Trallès, and Lefevre-Gineau, who performed the whole of the experiments of precision.

Trallès, as reporter of the commission, presented the platinum prototypes to the legislative body, after having presented them to the Institute of France. It is thus that under the shield of that most illustrious commission, and with the strongest sanction of the legislative body, the new system of weights and measures replaced the old uncertainties, and endowed the whole world with units suitable for the acceptance of all civilized nations.

That work, the fruit of the co-operation of all nations, will one day unite them all, as is well proved by the fact that this system is daily extending itself; for it has become law in Belgium, Spain, France, Greece, Holland, Lombardy, Poland, and Switzerland. The Zollverein has readjusted on it its common measures, making its pound five hundred grammes, its foot three decimeters, and its quart one litre and a half.

It has also been accepted on the other side of the Atlantic; for it is law in Chili and Colombia, and has been lately promulgated in Mexico.

How could it be otherwise? Did not America, by the measure of the meridian arc in Peru, furnish us with the length of the provisional metre, which, it is well known, does not differ, for the uses of civil life, from the definitive metre? For the provisional metre deposited in our collection in the conservatory is really only one-hundredth of a millimetre larger than those admitted as definitive. We

may justly say, therefore, that it is in America where we have sought this measure of union.

I am happy to be able thus to recall to mind the origin of the weights and measures, the list of which follows, that I may induce the people to whom they are presented to adopt them in practice.

The weights and measures, as well as the instruments of weighing, measuring, and stamping, which the government of the French republic puts at your disposal to be presented in its name to the govern- of the United States, as a token of reciprocal sympathy, are the following, viz:

One complete collection of the whole apparatus, weights, and measures, composing in France the bureaus of verification of weights and measures, viz:

MEASURES OF LENGTH.

One brass metre, graduated in its whole length, used as a standard.

One wooden metre, bound with iron at its two ends.

One double decimetre.

One decimetre, (surveyor's chain,) with 10 stakes.

One chain metre for measuring the circumference of fagots and bundles of fire wood.

MEASURES OF CAPACITY.

Brass standards, with disks of ground glass.

One	double décalitre	= 20	litres.
"	décalitre	10	"
"	demi-décalitre	5	"
"	double litre	2	"
"	litre	1	"
"	demi-litre	0.5	"
"	double décilitre	0.2	"
"	décilitre	0.1	"
"	demi-décilitre	0.05	"
"	double centilitre	0.02	"
"	centilitre	0.01	"

SPECIMENS IN WOOD OF DRY MEASURES OF CAPACITY.

For grains.

One	hectolitre	100	litres.
"	demi-hectolitre	50	"
"	double décalitre	20	"
"	décalitre	10	"
"	demi-decalitre	5	"
"	double litre	2	"
"	litre	1	"
"	demi-litre	0.5	"
"	double décilitre	0.2	"
"	décilitre	0.1	"
'	demi-décilitre	0.05	"

For coal measures (with feet.)

One hectolitre	100	litres.
" demi-hectolitre	50	"

SPECIMENS IN LEGAL FORM OF THE BLOCK TIN MEASURES OF CAPACITY IN USE FOR LIQUIDS.

First Series, (cylindrical.)

One double litre	2	litres.
" litre	1	"
" demi-litre	0.5	"
" double décilitre	0.2	"
" décilitre	0.1	"
" demi-décilitre	0.05	"
" double centilitre	0.02	"
" centilitre	0.01	"

Second series, (with handles.)

One double litre	2	litres.
" litre	1	"
" demi-litre	0.5	"
" double décilitre	0.2	"
" décilitre	0.1	"
" demi-décilitre	0.05	"
" double centilitre	0.02	"
" centilitre	0.01	"

Third series, (with handle and cover.)

One double litre	2	litres.
" litre	1	"
" demi-litre	0.5	"
" double décilitre	0.2	"
" décilitre	0.1	"
" demi-décilitre	0.05	"
" double centilitre	0.02	"
" centilitre	0.01	"

SPECIMENS IN TIN PLATE OF MEASURES OF CAPACITY FOR MILK AND OIL.

Firt series, for milk and military rations.

One double litre	2	litres.
" litre	1	"
" demi-litre	0.5	"
" double décilitre	0.2	"
" décilitre	0.1	"
" demi-décilitre	0.05	"
" double centilitre	0.02	"
" centilitre	0.01	"

Second series, for lamp oil, marked B.

One double litre	2	litres.
" litre	1	"
" demi-litre	0.5	"
" double décilitre	0.2	"
" décilitre	0.1	"
" demi-décilitre	0.05	"
" double centilitre	0.02	"
" centilitre	0.01	"

Third series, for table oil, marked M.

One double litre	2	litres.
" litre	1	"
" demi-litre	0.5	"
" double décilitre	0.2	"
" décilitre	0.1	"
" demi-décilitre	0.05	"
" double centilitre	0.02	"
" centilitre	0.01	"

BRASS STANDARD WEIGHTS, (WITH KNOBS.)

One weight of 20 kilogrammes	= 20,000	grammes.
" " 10 "	10,000	"
" " 5 "	5,000	"
Two double kilogrammes	2,000	"
Two weights of 1 kilogramme	1,000	"

Cast-iron weights.

50	kilogrammes, in trapezoidal form
20	in pyramidal form.
10	
5	
2	
1	
500	grammes.
200	"
100	"
50	"

The apparatus of verification consists of:

One balance capable of weighing 50 kilogrammes, sensitive to	0.02 gramme.
One balance capable of weighing 1 kilogramme, sensitive to	0.01 "
One assay balance capable, &c., 20 grammes, sensitive to	0.001 "
One hydrostatic balance, &c., 2 kilogrammes, sensitive to	0.01 "

The assay balance for the verification of small weights is accompanied by two series of weights, of grammes 20, 10, 10, 5, 2, and 1, also a series of the subdivisions of the gramme, and finally, two supernumerary dishes.

The hydrostatic balance is accompanied by a copper bucket for weighing in water. The balance serves, by its verification, to determine the standard of the alloy employed in the fabrication of pewter measures of capacity.

A *hopper* attached to an oaken bench is used to verify the wooden measures of capacity, and the strike to remove the surplus of the quantity of seed ascertained in advance, with which the measures are tested.

The seed used for this purpose is the rape seed, or any other, the form of which is round, small and regular.

On the bench is fastened a screw press intended to stamp the measure, for this purpose it is accompanied by a box containing a beak-iron and two small cushions, and also two keys to lighten the screw nuts.

The inspectors who, in their rounds of inspection, could not carry with them the above mentioned cumbrous apparatus, are provided simply with a small case, which will be found to contain the following articles, viz:

One wooden metre, in two parts.

One double décimetre, of boxwood.

One copper gauge, with projecting division marks for the verifica-

tion of the dimensions of the wooden measures of capacity from the double hectolitre to the semi-décilitre.

One double set balance, used as a steelyard of $\frac{1}{10}$, for weights from 20 to 2 kilogrammes, and a balance of equal arms for the kilogramme and its subdivisions.

One iron press, for stamping.

One heavy hammer.

Seven samples of stamps.

One kilogramme of nest weights, similar to the one above mentioned.

One kilogramme, with knob.

To this collection are added the official ordinances and instructions on the fabrication and verification of weights and measures, accompanied by an atlas representing all the weights and measures in their legal form, similar to those of the collection.

To this collection which does not aim at great precision, but only at a precision practicable for ordinary uses, has been added a collection of units, the perfect exactness of which is guaranteed by the name of their maker, *Gambey*.

These units are:

One brass graduated metre.

One brass litre.

One brass kilogramme, gilt.

Finally, to crown the collection, his excellency, the minister, has ordered to be added also a standard metre, in the construction of which I am at present occupied, and which will be compared with the greatest care with the platinum prototype metre deposited in the State archives.

That metre will be "à bout" and "a trait" (that is, it will have ends, projecting beyond the lines, between which the metre is measured,) and will constitute a *Borda thermometer*, by the addition of a second rule, upon which it will be fastened at one end. By this addition may be ascertained, at any instant, both the absolute length of the metre and its temperature.

These two rules will necessarily be made of two different metals; the metre of steel, gilded, to save it from rust, and the other, which supports it, of brass. The difference of expansion of these two metals is great enough to give appreciable divisions on the two corresponding scales, marked on the free ends of these two rules.

I will give you the details of the construction of this standard metre, when I send you the results of my experiments upon the expansion of the two metals, and upon the comparison of this metre with its prototype.

I am also about to verify the brass weights, as well as the measures of capacity. As soon as these labors are completed, the whole will be forwarded to you in good order. I venture to express the desire, if not the expectation, that these articles will serve as a foundation for the application of the metrical system in the United States. This is my earnest wish. I have exerted myself to the utmost to spare our old friends beyond the sea all additional labor, when they shall conclude to accept to our weights and measures. It is with this view that I have asked and obtained the funds necessary to the verification and fabri-

cation of this last metre, the presentation of which was proposed by myself.

I believe, sir, I have fulfilled your wishes, while gratifying myself, by addressing you this long letter. At the first opportunity, I will communicate orally anything I may have omitted.

Meanwhile, believe me, sir, your most affectionate servant,

J. C. SILBERMANN,
Superintendent of the National Conservatory of Arts and Trades.

APPENDIX No. 18.

Letter of General A. Morin, Administrator of the Conservatory of Arts and Trades, transmitting the report of Mr. Silbermann, upon the French weights and measures presented to the United States.

Report upon the metrical weights and measures sent to the United States, by M. Silbermann, Superintendent of the Conservatory of Arts and Trades, of France.

The United States government, at the solicitation of Monsieur Vattemare, presented to France a beautiful collection of weights and measures, which Professor Bache, superintendent of weights and measures, was pleased to verify himself.

To this collection were added two balances, masterpieces of precision.

In return for this present, the French government wished to give to the United States a complete collection of measures of the metrical system, also accurately verified, in order to bring nearer that period, so desirable for commercial interests, when one system of measures shall be employed in both countries.

To the commerical and common measures have been added standards, the verification of which has been executed at the National Conservatory of Arts and Trades, by the director, by means of the standards of commerce, deposited there, which had been previously compared with those of the State archives.

The following report contains the results of these verifications.

A. MORIN.
General of artillery, member of the Institute, Administrator of the Conservatory of Arts and Trades.

Report of the operations executed by order of General A. Morin, member of the Institute, Superintendent of the Conservatory of Arts and Trades, for the verification of the measures presented to the United States by France, under the direction of M. Silbermann, director of the Conservatory of Arts and Trades.

The verification of the standards of weights and measures which the French government has presented to the government of the United

States, has been made at the Conservatory of Arts and Trades, in the gallery of weights and measures of that establishment, and with the prototypes of commerce which are deposited there.

These prototypes had been themselves compared with the official standards deposited in the archives of France.

The results of this comparison, as well as the manner in which they have been obtained, will be shown presently.

These two series of standards, (of commerce and of the archives,) consist each of a metre "á bout" (cut to length) of platinum, and a platinum kilogramme of a cylindrical form.

These measures were made at the same time by the celebrated artists Lenoir and Fortin, and verified by their colleagues of the international commission of weights and measures, in the 7th year of the republic, (1799.)

The comparison of the metre has been made by means of a special comparator, ("comparateur,") which shows a variation of one-ten-thousandth of a millimetre, that is to say $\frac{1}{10000000}$ of the whole length.

For the comparison of the kilogramme we used a balance which was sensitive to half a millegramme. The numbers obtained have been corrected for the loss which these weights have sustained in air—a loss which has been determined by means of a comparator, constructed with the object of ascertaining the linear dimensions of these cylindrical weights.

There is no standard of measures of capacity; in fact, it would be unnecessary, since the *litre*, the unit of this standard, is a cubic decimetre; and a cubic decimetre of distilled water, at its maximum density, weighs in a vacuum exactly one kilogramme.

The kilogramme, then, supplies the place of this unit.

The series of weights and measures presented to the United States, in exchange for those which have been transmitted to us by M. Vattemare, consists of three different series.

The first is composed of a standard metre of steel upon a bronze base, and a standard kilogramme of brass, gilt.

The second consists of a graduated brass metre, and of a litre, both made by *Gambey*.

The third consists of the series of weights and measures which compose the assortment of a bureau of verification of the first order. Finally, the apparatus for weighing, measuring, and sealing, necessary to these bureaus, complete this set.

CHAPTER I.

COMPARISON OF THE LENGTH MEASURES.

Comparison of the standard metre of commerce with that of the State archives.

This comparison was made by means of a lever-comparator, constructed, under my direction, by M. Brunner.

The accuracy of comparisons being dependent upon the precision of the apparatus for verification, I propose to give here a full description of this comparator, as well as the manner of using it.

1st. *The comparator.*

The base consists of two rules *aa' bb'*, of the same breadth, and nearly of the same length; they are placed one above the other, and firmly pinned together at *c'*, (to the right in fig 2.) The lower rule *bb'*, is of bronze, the upper, *aa'*, (upon which the metre under trial is placed,) of platinum. Each is 30 millimetres in breadth; their other dimensions are as follows:

	Length.	Thickness.
Platinum rule.....	1.12 millimetre.	3.50 millimetres.
Bronze rule.....	1.13 "	7.00 "

The length of the metre is obtained between the heel points *dd'*, at the extremities of the short arms, *df d'f'*, of the two levers *de d'e'*, one lever at each extremity of the measure, the longer arms of which levers serve to multiply any minute differences of length in metres placed between the heelpoints. The axes *ff'*, upon which the levers move, are firmly fixed to the lower rule. The shorter arms *df d'f'*, of these levers, are eight millimetres long, and are curved. The long arms *fe f'e'* are 160 millimetres long. Their position is vertical above the rule to which they are united by the pieces supporting the axis of rotation.

This axis moves between the points of two screws secured in the support.

The lever *d' e'* (situated on the side *a'*, to the right in fig 2, where the two rules are united,) serves as a striker against one end of the metre under trial, the axis of rotation *f* of this lever being for this object firmly attached to the rule.

The other lever *de* (contact-lever) is brought into contact with the extremity of the introduced metre; and, to accomplish this, it is moved by the slide *ghi* by the action of a micrometric screw, (*s*,) the nut *k* of which is fixed to the bronze rule by means of a projection which unites the two pieces.

In order not to injure the ends of the introduced metre, the two levers are held against the extremities only by means of a small

spring $l\,l'$, the power of which does not exceed five grammes. The curved extremity $d\,d'$ of the short arms is cylindrical and horizontal, and presents, for contact with the introduced metre and edge, two millimetres in length.

At the summit $m\,m'$, of the piece constituting the support of each lever, there is a zero mark, and also another on the top of the lever; the coincidence of these two gives the requisite length between the extremities of the short arms of the levers. To increase this precision, five marks are made instead of one, two either side of the zero mark, and the intervals on the top of the lever are slightly less than those on the support, in order that they may act as a vernier; and to give still greater exactness to the observation, there is an eye-glass to each support. If the small arms of the levers $d\,d'$ are $\frac{1}{1000}$ of a millimetre out of the way, it is indicated at the extremity of the long arm by half a division on the vernier, a quantity quite appreciable by means of the lenses.

To make the delicate contact required, for which pushing with the hand alone would be unsatisfactory, there is a piece, p, (right end in fig. 2,) which presses against the side of the measure. This piece terminates in a horizontal tail piece q, which connects with a thumb-screw r, not very fine in its thread, that passes through the foot of the support. This screw is situated in the prolongation of the upper surface of the platinum rule, upon which surface the rule under trial rests.

The micrometric screw s, above alluded to, makes just a semi-millimetre each revolution. The head t is divided into 500 parts, and subdivided into 5,000 by a vernier (v) fixed to the support. The millimetre is thus graduated to 10,000 parts, which is equivalent to ten millionths of a metre, or the relation between a metre and a quarter of a terrestrial meridian. This screw turns between two points x, screwed into the slide which supports the contact lever, and is situated in the same line with the points of contact.

The delicacy of the points of contact being ascertained, there is still a condition to be provided for, viz: the invariability of the distance between the two heel points of the levers, an invariability constantly disturbed by variations of temperature. To insure an invariable length in the bronze rule, which serves as a support to the levers, M. Silbermann applies to this rule the rule $a\,a'$ of platinum, which, as the expansion of the two metals is very different, makes of the couple a Borda thermometer, (fig. 2;) and it indicates for each instant the temperature of the system. This is the object of uniting the two rules at one end e, by a pin which goes through both, while at the other end they are free. The difference of expansion is indicated by a scale c, divided into fourths of millimetres, traced upon the platinum rule. A vernier, made of a plate of platinum, is fixed against the bronze rule, which divides 24 of these fourths into 25 parts, and indicates thus hundredths of a millimetre. This plate serves also to guide the platinum rule, while the foot of the nut of the micrometric screw guides the rule on the other side.

For multiplying the movements of expansion of this Borda thermometer, the lever d'', f'', e'', (fig. 2,) is introduced. The arc e'', which

terminates the arm of the lever f″ e″, carries a vernier which moves against a divided arc m″, whose foot carries the axis f″, of the lever fixed to the bronze rule b b′. The divisions of the vernier register $\frac{1}{50}$ of a degree of temperature. This apparatus for the comparisons ("comparateur") rests on several pieces, y, of equal thickness, and these on a brass support zz′, accurately planed.

The experiments which follow, and which have been made with the prototype of the archives, and that of commerce, as well as with the measures sent to the United States, will serve at the same time as examples for the use of the apparatus which has just been described

2d. Comparison of the standards of commerce with that of the archives.

These two metres, both of platinum, constructed at the same time, and deposited, one at the archives of State, the 4th Messidor, of the 8th year, (22d June, 1799,) and the other at the Department of the Interior, previously verified by the same operators, are found to be the same at the temperature of 10° (centigrade) after 24 hours continuance side by side.

I did not permit myself to put the standard in the ice; besides, the small co-efficient of expansion of platinum allows us to admit that there would not be a sensible difference between these two metres at the lawful temperature of 0° centigrade.

Either of these metres, then, can be replaced without hesitation by the other, as I have already done in the comparison of a standard intended for Spain.

Construction of the standard metre for the United States, and determination of its co-efficient of expansion.

This standard metre *aa′* is of steel, annealed in a charcoal fire, which was extinguished as slowly as possible; was afterwards dressed by the planing machine without receiving a blow of the hammer or the touch of a file, then rubbed with emery to finish it on its four sides; finally, it was cut to the metric length at the temperature of melting ice, by means of a standard at the same temperature. These two ends were arranged, ground and polished by M. Brunner, by a method of his own devising.

This standard metre of the United States is at the same time "à bout" (cut to length) and "*à trait,*" (the standard length being between the extreme division lines,) a small steel prism *d d′* is screwed upon each end to make the joint visible; between the prism and the end a gold plate of the thickness of a hundredth of a millimetre is inserted.

Placed upon a thicker bronze bar, *b b′*, similar to that of the comparator, it forms with the co-operation of this a Borda thermometer, both are united at one of their extremities *a′*, by a conical pin *c′*, like the two bars of the comparator; the axis of this conical pin is 23 millimetres from the extremity of the metre. The two extremities *a* are free in their motions of expansion, each bears a divided scale; the scale on the bronze bar is engraved on a silver plate *f′* screwed against this bar, its divisions are fourths of a millimetre. The vernier *e* is

fixed on the steel bar; it is composed of a silver plate set into the face of the bar, it gives 25ths of the division opposite, that is hundredths of millimetres.

The distance from the 0 of this vernier to the axis c' is 954 millimetres. Opposite to the divided plate of the bronze bar, on the other side at g, is a brass plate of the same dimensions; these two plates serve as guides for the free end of the steel metre.

A vernier e', and a division on silver f', as well as a guide g of brass similar to the preceeding is shown at the fixed end a'. This second division will serve in case the axis should not be in exact contact, which would be immediately made known by the change of coincidence between the two divided scales placed on this extremity.

Difference of expansion between the two bars.

This system of bars was placed in melting ice, and there kept for two hours; after which time, the coincidences being constant, the measures were proceeded with.

The vernier of the fixed end indicated..... 4.88*mm.*
That of the free end..... 4.42*mm.*

Two more hours immersion, in boiling water, gave the following numbers:

For the vernier of the fixed end..... 4.88*mm.*
For that of the free end..... 3.80*mm.*

Difference between the free ends 4.42*mm.* 3.80*mm.* = 0.62*mm.*

The difference of expansion from 0° to 100° between the two metals, steel and bronze, which constitute the two metres experimented on, is then 0.62*mm.* for 100° and for a length of 954*mm.* the distance from the axis of the fixed point to the 0 of the vernier placed at the free end.

Absolute expansion of the two bars.

To determine the absolute expansion of each of these two bars, I have been obliged to devise a special process which effectually admits the application of a constant length to each of the bars, for each degree of temperature from 0° to 100°.

The instrument, by means of which a constant length is inscribed on the bar, is a beam compass with very solid points, constantly kept in a trough of melting ice.

The compass consists of a bar of steel aa', 1.20*m.* long, 5 centimetres wide, and 8 millimetres thick; it has two dry points, screwed on at the distance of a metre from each other. These points are of tempered steel and very solid their extremities are turned and sharpened with great care, and are of a conical form, the opposite sides of the cone making with each other an angle of about 60°. The distance between the two points is $\frac{1}{200}$ of a millimetre less than the metre in melting ice.

The trough in which this compass is placed is of a triangular form; one of the angles constitutes the bottom of it, in which are arranged two openings to allow passage for the points of the compass, so that

these points may project about 15 millimetres. Whilst the compass is immersed in melting ice, the bar under trial is likewise placed in the same substance, the trough, which is intended to receive the bar, is furnished with a cast iron support, well straightened in its whole length, intended to receive lengthways the bar under trial. After remaining two hours in the trough, the bar has reached a temperature that may be considered uniform and invariable.

After this, to mark the bar with the compass, the extremities are lightly uncovered, then the trough containing the compass is carried there, so that the points may not be more than a millimetre from the surface of the bar; then resting lightly one of the points on it, an arc of a circle of a millimetre or two in length is described with the other; the point is stopped at the extremity of this arc, and another arc is then traced with the correspondent point at the other extremity of the bar.

After this first pointing, the compass is put aside, the bar with its support is taken away, and placed in a metal trough filled with distilled water, the temperature of which is raised to the boiling point by means of alcohol lamps. At the end of two hours of ebullition the second pointing is commenced; this operation resembles the first, nevertheless precaution must be taken to place the first point within the trace made in the first pointing, and about half a millimetree from this trace; then the other point will also fall within other mark and very near to it. The two last marks will then be found situated between the two first and they will consist equally of two arcs of circles; this precaution was omitted in the present case because the first point was carried outside; it is for this reason that this portion must be subtracted from the other.

Four lines will thus be obtained belonging two and two to the temperature from 0° to 100° C.

When the pointing is finished, the distance between the arcs of the circles obtained at the two extreme temperatures is measured by the aid of the micrometer and the microscope 0 of the comparator.

The distance between the two lines of the free end of the bronze bar has thus been found to be 2.2459*mm.*, which corresponds to the interval of the arcs of the fixed end 0.5429*mm.*; this last distance is negative.

The absolute expansion of the bronze bar is then 2.2459*mm.* — 0.5429*mm.* = 1.7030*mm.*

The distance measured by the micrometer between the two lines of the free end of the steel bar = 1.0680*mm.*; that of the fixed end = 0.5578*mm.*, which is negative; the absolute expansion of the steel metre is then from 0° to 100° = 1.6080*mm.* — 0.5578*mm.* = 1.0502*mm.*

3*d*. *Comparison between the differential expansion and the absolute expansion of the two bars.*

These two kinds of experiments took place simultaneously.

The expansion of the bronze having been.....	1.7030*mm.*
That of the steel metre.....	1.0502 "
We have for 1 metre, the difference = ...	0.6528*mm.*

Which for 0.954*m.*, the distance of the vernier, gives 0.6228.

This quantity is confirmed by the reading 0.62 given in the first place, a reading made, as we know, to a hundredth of a millimetre.

From the preceding data it is easy to establish the co-efficient of correction for any temperature, by means of reading the two divisions which are traced on the extremity of the steel metre.

Let c represent the variation or actual difference with the metre at 0°, l the difference the two verniers at t° for the temperature c, l' the difference between the two verniers at 0° for the exact metre, then we shall have, $c = (l - l') \times \frac{1.7030}{0.6228.}$

For example, in the case of water boiling at 100°:

		mm.			*mm.*
At 0°	The fixed vernier	4.88	At 100°	The fixed vernier	4.88
	The free vernier	4.42		The free vernier	3.80
	$l' =$	0.46		$l =$	1.08

We then have $c = (1.08 - 0.46) \times \frac{1.70}{0.62} = \frac{0.62 \times 1.70}{0.62} =$ 1.70*mm.*, and the metre is found 1.70*mm.* longer at 1° than at 0°.

If the temperature of the apparatus is desired to be found, we shall have $t = \frac{l - l'}{0.0062.}$

If in any experiment the coincidence at the fixed end, under the number 4.88 for example, did not take place, the centre having become loosened, it will be sufficient to place the new indication in the first place in the two values l and l', or rather, to add its difference from 4.88 to $l' = 0.46$ — if the new number is smaller than 4.88, or to diminish in the contrary case.

Thus constructed, on the principal of the Borda thermometer, this metre offers the advantage of being easily reduced to 0°, by the reading of the vernier, or to give the quantity to add to the absolute metre in order to have a standard measure at any temperature. By moving the verniers it is easily ascertained if the temperature is fixed. Finally, the standard is correct as a metre in its whole length, or between the extreme division lines.

4th. Comparison between the steel metre and the standard of the Conservatory of Arts and Trades.

The comparison was made in melting ice, whilst determining the preceeding expansion on the comparator, likewise in ice. When all the levers were invariable, the reading of the micrometric screw gave:

For the platinum standard.....	0.5219*mm.*
For the standard of steel.....	0.4993 "
The steel metre is then too short by.....	0.0226 "

Its legal value, then, at the temperature of melting ice, is:

$$1m. - 0.0000226mm. = 0.9999774m.$$

§ *Comparison of the brass metre graduated by Gambey.*

This metre was compared at the same time as the former, its length at 0° is 1. 0002992*m.*

Its co-efficient of expansion, which has been determined by Gambey, is marked on it. I have not, therefore, verified it.

Brass graduated metre (for the bureaus of verification.)

This metre has been stamped in the bureau of verification; it possesses, therefore, the exactness required by law.

The wooden metre is likewise stamped and equally exact.

CHAPTER II.

COMPARISON OF WEIGHTS.

§ 1. *Comparison of the standard platinum kilogramme of the archives of State with the standard kilogramme of commerce, also of platinum deposited in the Conservatory of Arts and Trades.*

These two weights were compared in the open air on a balance sensitive to half a milligramme; they should consequently be corrected for the difference of weight of the volume of air which they displace at the moment of weighing.

The volume of these two kilogrammes has been determined by means of an instrument constructed expressly by Gambey, which is exact to a hundredth of a millimetre nearly, and serves to determine the height and diameter of these cylinders. The result of the operation has proved that their height is nearly equal to their diameter. The mean taken from a large number of measurements has given for the volume of the standard of the archives 48.6973 centimetre cubes, and of the standard of the conservatory 52.3220 cubic centimetres. Weight of 1 litre or 1,000 cubic centimetres of air.

The barometer marked 754.00*mm.* at 14°.9; whence $H_0 =$ 752.17*mm.* The hygrometer for condensation gave the dew-point at 9°.7; whence $f =$ 9.305*mm.* for the elastic force of the vapor contained in the air.

The temperature of the air was 15°.7

Pressure of dry air = 752.17 — 9.305 = 742.865, } At the temperature of 9°.7.
Pressure of the vapor in the air = 9.305, }

One litre of dry air at 0°, under normal pressure of 760*mm.*, weighs 1.2991 *gms.*

One litre of vapor of water at 0°, under normal pressnre, will weigh 0.80559.*

One litre of dry air under 742.865*mm.*, and at 9°.7, weighs tnen $\frac{742.865 \times 1.2991}{760 \times (1 + 0.003666) \times 9\ 7} = 1.2248$*gms.*; and one litre of vapor under 9.305*mm.*, and at 9°.7, weighs $\frac{9.305 \times 0.80559}{760 \times (1 + 0.003666) \times 9.7} = 0.0095$*gm.*;

* This weight of the vapor of water at 0°, under the pressure of 760*mm.*, is deducted from its weight at 100°, under the same pressure, which is 0.58948gms.; corrected afterw ards for its contraction from 100° to 0° by the coefficient of expansion of the air, which for 0, is 0.00366.

then one litre of damp air under 752.170 mm., and at 9°.7, weighs 1.2343 gramme.

The weighing having been made at 15°.7 the preceding weight is too great by a quantity corresponding to the increase of volume which this weight of air experienced in passing from 9°.7 to 15°.7. We shall then have the weight of one litre of damp air, at a temperature of $15°.7 = \frac{1.2343}{1 + 0.003666 \times (15.7 - 9.7)} = 1.2077gm.$; one litre, or 1,000 centimetres cubes, weighing 1.2077*gm.* One centimetre cube weighs 0.0012077.

Weight of the volume of displaced air.—P, the standard of the archives, displacing 48.6973*cms.* of air, (cubic centimetres,) the correction becomes:

$$48.6973cms. \times 0.0012077gm. = 0.05881gm.$$

P′, the standard of the conservatory, displacing 52.3220 cms. of air, (cubic centimetres,) the correction becomes:

$$52.3220cms. \times 0.0012077gm. = 0.063891gm.$$

The mean of the weighings gives for the equilibrium in the air:

$$P' + 0.001gms. = P.$$

If the weights thus balanced in the air were balanced in a vacuum, the equilibrium would be destroyed; the body which has the most volume, experiencing the greatest loss in the air, would gain most in weight in passing from the air into a vacuum; it would then make the balance cant by a weight equal to the difference of the weight of the air previously displaced by each of them.

Subtracting, therefore, from each of these weights its loss in the air to restore the equilibrium in a vacuum, which is equivalent to taking away from the most voluminous the difference of the two losses, we shall have for equilibrium in a vacuum:

$$P' + 0.001gm. - 0.06319gm. = P - 0.05881, \text{ whence}$$

$P' = P - 0.05881gm. - 0.001gm. + 0.06319gm. = P + 0.00338gm.$, or $P = 1{,}000$ gms.

$$P' = 1{,}000gms. + 0.00338gm. = 1{,}000.00338gms.$$

§ 2. *Comparison of the standard platinum kilogramme of commerce, with the kilogramme of brass, gilt, for the United States.*

All the operations of weighing were performed with the two balances presented to France by the government of the United States.

Both these two balances are sensitive to the 0.0005 gramme; the smaller one being loaded with one kilogramme and the larger with ten kilogrammes.

To preserve this sensibility, and to avoid the alterations they might experience by a change of weight, it is necessary to leave the scales suspended with their loads, then to steady them underneath by means of the little spring which is found there for this purpose, and at the same time hold their basins and their weights firmly so as to avoid any variation while being suspended; not until then are the weights changed, the spring loosened and the balance left at perfect liberty.

These minute precautions are indispensable, else there is danger of

committing errors of from 20 to 30 milligrammes in the larger and from 5 to 6 in the smaller balance.

The preceding platinum weights P′ was used in the comparison of the gilt, brass, kilogramme made by Gambey, for international exchanges, amongst which is comprised No. 6, intended for the United States.

The volume of this No. 6 is deducted from the volume of water which it displaces at the temperature of 12°.

(NOTE.—It is quite certain that the knob, which is tightly screwed on, did not allow the water to penetrate into the interior, not even into the joint.)

The weight of water displaced at 12° = 123.945*gms.*; the volume of this brass kilogramme is then, according to the table of Despretz, $\frac{123.945}{0.999634} = 123.9903cc.$

These corrections, rendered indispensable by the loss of weight in the air, were applied with the assistance of the following observations made during the weighing.

The barometer was at 760.60*mm.* at 13°.1, whence $H_0 = 758.99mm.$; the hygrometer at the dew point at 4°.5 C: then $f = 6.74$; the pressure of the dry air = 758.99*mm.* — 6.74*mm.* = 752.25*mm.*, the temperature of the air 13°.1 C, whence one litre of dry air, under 752.25*mm.* and at 4°.5, weighs $\frac{752.25 \times 1.2991}{760 \times (1 + 0.003666) \times 4.5} = 1.2691$, and one litre of vapor, under 6.74*mm.* and at 4°.5, weighs $\frac{6.74 \times 0,80559}{760 \times (1 + 0.003666) \times 4.5} = 0.0070$. One litre of vapor, under 758.99*mm.*, at 4°.5, weighs 1.2761.

The weighing having been made at 13°.1, the preceding weight is too great by a quantity corresponding to the surplus of expansion which the volume of air experiences in passing from 4°.5 to 13°.1, or for 8°.6.

We have then for the weight of one litre at 13°.1, $\frac{1.2761}{(1 + 0.00366) \times 8.6}$ = 1.2492*gm.*, and, consequently, 1*cc.* of air weighs 0.0012492*gm.* The standard P′ loses, therefore, of its weight, 52.3220 × 0.0012492 = 0.06536*gm.*, and the brass kilogramme No. 6, 123.9903 × 0.0012492 = 0.15489*gm.* The comparison of these two kilogrammes having been made in air, it is necessary, in order to bring it back to what it would be in a vacuum, to subtract from each the loss experienced by it in the air. The double weighings of No. 6 have given the following results:

No. 6 + 0.1320*gm.* = P′ + 0.0420; introducing the correction in returning to the vacuum we have:

No. 6 + 0.1320*gm.* — 0.15489*gm.* = P′ + 0.0420*gm.* — 0.06536*gm.*; from whence:

No. 6 = P′ + 0.0420 — 0.06536*gm.* — 0.1320*gm.* + 0.15489*gm.* = P′ 0.00047.

Replacing P′ by its value, which is 1000.00338, we have No. 6 = 1000.00338*gm.* — 0.00047*gm.* = 1000.00291*gm.*

All the kilogrammes which have been used for the comparison were

thus verified, and they gave in a vacuum the following results, which have, besides, been the object of a direct verification:

	Grammes.
No. 1	1000.00291
No. 2	1000.00690
No. 3	1000.00890
No. 4	1000.00590
No. 5	1000.00990
No. 6	1000.00291

§ 3. *Direct comparison, in the vacuum of the air-pump, between the standard kilogramme of commerce and the gilt brass kilogramme, No. 1, of the preceding series.*

This comparison has been heretofore considered impracticable; at all events it has not been undertaken. The method which I have adopted perfectly accomplishes the object; it had not been fully determined upon at the time I compared the kilogramme intended for the United States, but that kilogramme is the same as No. 1, which here serves as a standard. This method is very simple in practice, and free from the effects of the temperature, or of pressure, or dampness, as well as from the variations produced by the differences of volume or of density.

Two small glass, receivers, fig. 1, *a*. *a'*, having exactly the capacity necessary to contain a brass kilogramme, *k*, equal in volume (0.2 litre) and in weight, are provided at their top with a small cock; each receiver is placed on a disk of ground glass, which serves as a moveable plate. The cementing between the receiver and the disk is effected by a process of Monsieur Poinsot, chemist to the Conservatory of Arts and Trades; it consists in covering the edge of the receivers with a band of vulcanized India rubber, from which the excess of sulphur has been removed by immersing it in a solution of potash; this band is stretched round the edge of the receiver, and so applied to the glass plate. The vacuum is perfectly preserved if the band is sufficiently thin.

The standard kilogramme *p*. being placed under one of the receivers, and a kilogramme serving for counterpoise having been placed under the other, a vacuum is made in both receivers at the same time, and dry hydrogen is introduced before completing the vacuum. After the hydrogen has been expelled by the air-pump, the remaining pressure is stopped at two millimetres; the weight of hydrogen left in each receiver under this pressure is inappreciable in the balance; moreover, the weight to be considered is but the difference of the weights of the volumes displaced, a weight inferior to the preceding, which is itself only $\frac{0.2 \text{ lit.} \times 0.0898 \text{ gm.} \times 3 \text{ mm.}}{760 \text{ mm.}} = 0.00047$, or nearly five-hundredths of a milligramme. After the air was exhausted from the two receivers, each was placed upon a dish of the balance.

After restoring the equilibrium very exactly with some small weights, I withdrew the bell containing the platinum standard, and replaced the latter by the kilogramme No. 1. I then produced the

vacuum as before, and above all I reduced it to the same degree of interior pressure.

Again, replacing the receiver in this condition on the dish, I obtained an equilibrium by increasing by half a milligramme the weight in the other dish.

This last result agrees extremely well with what was obtained by the ordinary corrections for reducing the weighings in the open air to those in a vacuum.

		Kil. Gr.
In this way the weight of the standard was found...	=	1000.00338
The weight of the kilogramme No. 1.....	=	1000.00291
Difference between these weights in air.....	=	0.00047
And, finally, difference between these weights in a vacuum.....	=	0.0005

This identity of the two differences confirms the first operations as well as the process of verification above described.

§. 4 *Comparison of the standard weights of the collection intended for the United States, with the preceding kilogrammes taken as standards.*

I have supposed that all the brass weights were of the same density as the preceding, and as in this case they will balance equally in a vacuum and in the open air, their volume of air displaced being the same, there has not been applied to these weights the loss they experience in the air; their value is therefore what they have in a vacuum.

The series of the standard weights is composed of the following pieces:

A	weight	of	20	kilogrammes ..... or	20,000	grammes.
	"	"	10	"	10,000	"
	"	"	5	"	5,000	"
2d	"	"	2	"	2,000	"
1st	"	"	2	"	2,000	"
2d	"	"	1	"	1,000	"
1st	"	"	1	"	1,000	"
A	weight	of	5	hectogrammes.....	500	1,000 gms.
	"	"	2	"	200	
	"	"	1	"	100	
	"	"	1	"	100	
	"	"	5	decagrammes.....	50	
	"	"	2	"	20	
	"	"	1	"	10	
	"	"	1	"	10	
	"	"	5	grammes.....	5	
	"	"	2	"	2	
	"	"	2	"	2	
	"	"	1	"	1	

Fractions of the gramme.

A	weight	of	5	decigrammes.....	0.5	1 gr.
"	"		2	"	0.2	
"	"		1	"	0.1	
"	"		1	"	0.1	
"	"		5	centigrammes.....	0.05	
"	"		2	"	0.02	
"	"		1	"	0.01	
"	"		1	"	0.01	
"	"		5	milligrammes.....	0.005	
"	"		2	"	0.002	
"	"		1	"	0.001	
"	"		1	"	0.001	
"	"		1	"	0.001	

We commenced by verifying each of the weights of 1 kilogramme, then the weight of the 2 kilogrammes, then that of 5 kilogrammes, 10 kilogrammes, and of 20 kilogrammes; the multiples of the gramme from 1 gramme to 5 hectogrammes, making together 1,000 grammes, have been compared with the 1 kilogramme only. The subdivisions of the grammes, forming together 1 gramme, have been compared with the 1 gramme.

The double weighings have given the following gross results:

No. 1 of the 1 kilogramme = No. 6 + 0.0040 g. = 1,000.0029 g. + 0.0040 g. = 1000.0069 grammes.

No. 2 of the 1 kilogramme = No. 6 + 0.0020 g. = 1000.0029 g. + 0.0020 g. = 1000.0049 grammes.

No. 1 of the 2 kilogrammes = No. 6 + No. 1 = 0.076 g. = 2000.0058 g. — 0.076 g. = 1999.9298 grammes.

No 2 of the 2 kilogrammes = No. 6 + No. 1 — 0.064 g. = 2000.0058 g. — 0.064 g. = 1999;9418 grammes.

5 kilogrammes = No. 2 + No. 3 + No. 4 + No. 5 + No. 6 — 0.020 g. = 5000.0145 grammes.

10 kilogrammes = No. 2 + No. 3 + No. 4 + No. 5 + No. 6 + 5000.0145 g. — 0.088 = 9999.9610 grammes.

20 kilogrammes = 2 d. 1 k. + 2 k. + 2 k. + 5 k. + 10 k. preceding + 0.040 g. = 19999.848 g. + 0.040 g. + 19999.888 grammes.

The weight of 5 h., 2 h., 1 h., 1 h., 5 d., 2 d., 1 d., 1 d., 5 g., 2 g., 1 g., 1 g,, = No 6 + 0.002 g. = 1000.0049 grammes.

The nest kilogramme of 1 k. = No. 6 + 0.002 = 1000.0049 gr.

After being verified separately, the fractions of the gramme of the large series were again verified by a gramme adjusted by Fortin; these small weights added together ought to make exactly a gramme; their value was found equal to 1.00020 grammes on a gramme balance, by Devrine, made at the commencement of this century, and in which a division of 1 millimetre in size marks $\frac{1}{25}$ of a milligramme. In such a good condition for weighing, I was enabled to read with the naked eye the fourths of millimetres, or the division which corresponds to hundredths of a milligramme; this balance is provided with a spring similar to those of the United States.

§ . *Iron weights.*

The weights of cast iron having been subjected by the inspectors to the ordinary verification of weights, and their correctness being within the limits prescribed by law, have not undergone a second verification.

CHAPTER III.

COMPARISON OF THE MEASURES OF CAPACITY.

§ 1. *Definition and correction.*

The unit of the measures of capacity is the litre; it is in relation to the metre a cubic decimetre; for the weight of a cubic decimetre of distilled water, taken at its maximum density, is, at the temperature of 4° cent., and in a vacuum, exactly a kilogramme, or 1,000 grammes.

Under these conditions of legal connexion between the weight of water and its volume, the capacity of a vessel is determined by using the weight of distilled water which this vessel contains. But as the material of which the measures of capacity are made expands under the influence of heat, the legal condition is that their standard capacity shall be exact at the temperature of melting ice, or at 0° centigrade.

As the verifications are not practicable with these conditions of 0° for the vessel, and 4° for the water it contains, and for the whole in a vacuum, we are obliged, as regards the weight, to use calculation to assimilate the practical to the legal conditions.

For the corrections relative to the temperature of water, the loss of weight in the air, the humid state of the latter, and the expansion of the vessels, we consult, in the practice of verification, a table of corrections arranged, by an order of government, by Monsieur Coriolis, member of the institute.

This table supposes the barometrical pressure to be constant, and at the normal height of 760 millimetres at 0° of temperature; the hygrometrical state of the air at 72° of Saussure, which corresponds to the 0.5 of the maximum tension of the vapor contained in the air for the temperature of the observation, the cubic expansion of the brass of which the measures, weights, and counterpois are constructed, are supposed $= 3 \times 0.00002108 = 0.00006324$ for 1° centigrade; finally, for the expansion of water, we have admitted that given by Hälström, for each degree of temperature between 0° and 30° centigrade.

In the first column of this table is found the temperature of water; in the second, the weight of one litre of water at 10°; and in the third, the corresponding loss of weight which should be placed on the dish, if we have previously counterbalanced 1 kilogramme, in order to replace it by water.

Table of corrections for one litre.

Degrees centigrade.	Weight of one litre of water.	Loss of one kilogramme of water.	Degrees centigrade.	Weight of one litre of water.	Loss of one kilogramme of water.
		Grammes.			*Grammes.*
0	998.754	1.246	16	999.067	0.933
1	998.870	1.130	17	998.984	1.016
2	998.971	1.029	18	998.889	1.111
3	999.057	0.943	19	998.782	1.218
4	999.132	0.868	20	998.664	1.336
5	999.195	0.805	21	998.535	1.465
6	999.245	0.755	22	998.394	1.606
7	999.283	0.717	23	998.243	1.757
8	999.307	0.693	24	998.080	1.920
9	999.320	0.680	25	997.905	2.095
10	999.320	0.680	26	997.720	2.280
11	999.308	0.692	27	997.524	2·476
12	999.285	0.715	28	997.318	2.682
13	999.249	0.751	29	997.101	2.899
14	999.200	0.800	30	996.880	3.120
15	999.139	0.861			

This table secures an exactness of less than 5 milligrammes for the capacity of the litre, an exactness which is much greater than is necessary in practice, and which is even sufficient for theoretical uses. It has been employed in all the following verifications of capacity:

M. Parent, balance maker to the administration, employs a very sure method for adjusting the measures of capacity. He takes care during their construction to have them a few fractions of a cubic centimetre smaller than the legal capacity which is shown by the overflowing of the water contained in a stamped measure. The final adjustment is made by the weight of the water the vessel contains, and the capacity being too small, the weight of water will be less than that given in the preceding table. Multiplying the difference between these two weights by 8°.5, the approximate density of brass, we shall have the weight of the brass to be taken off the interior of the vessel, which occupies the place of the lacking quantity of water. As this brass is taken away by the scraper, it is sufficient to weigh in scrapings about seven times the weight of the difference, because emery paper, or any other polishing, will gradually make up 8°.5, and will allow a second correction.

This trial, which is but a determination of capacity, is similar to the one that will be used for the litre.

§ 2. *Verification of the capacity of the standard litre.*

The standard brass litre made by Gambey, covered with a disk of ground glass, surmounted by the standard kilogramme No. 6 and the

additional weight 0.792 gms. placed in one of the dishes, exactly balance the other dish loaded with a similar litre, covered by its disk and with one kilogramme.

Unloading then the first dish, and replacing the kilogramme No. 6 by distilled water poured into the litre, taking care to remove by means of a feather the bubbles of air adhering to the inner sides of this measure, the temperature of this water showing 12°.2 being taken, slide the glass disk to the edge of the vessel, cautiously removing by means of a small pipe, the surplus water, so as not to spill it on the outside, avoiding always the heating by the hands; after which, place on its dish the measure thus prepared. In accordance with the preceding table, the cubic decimetre or litre of water in brass weighs, at 12°.2, only 999.2778 gms., or rather its loss is 0.7222 gms.; after having added this loss to complete one kilogramme (weight of the litre of water at 4°) it was found necessary to add 0.863 gms. to complete the equilibrium, which indicates that the capacity of this measure is too small.

To determine this capacity, we have the following quantities, which have counterbalanced each other:

1000.00291 *gms.* + 0.792 = water + 0.7222 + 0.863, whence we obtain for the weight of the water at 4° contained in this measure, water + 0.7222 = 1000.00291 + 0.792 — 0.863 = 999.93191 *gms.*

1,000 grammes of water at 4° are equal to one litre, and 999.93191 *gr.* are equal to 0.99993191 litre.

This capacity could again be determined by means of the following experimental data, in which the co-efficient of expansion of the vessel is wanting:

The volume of the kilogramme No. 6 = 123.993 ce. the litre of water, at 12°.2, weighs according to Hälström, 999.6989 *gms.*, and according to Despretz 999.594 *gms.*

The barometer at 12°.2 = 762.35 *mm.* and at 0°, 760.840 *mm.*

The hygrometer for condensation gives the dew-point at 5°.50, whence *f*, the elastic force of vapor = 7.171 *mm*; finally the temperature of the air = 12°.2.

I yet prefer the preceding capacity to that which could be found by calculation by means of the above given quantities; first it will differ from it very little; besides, for comparisons, it is more regular to employ this method, which is used by the government to preserve uniformity.

§ 3. *Verification of the series of brass standards.*

This series is composed of eleven measures of capacity. They have undergone the same process as the litre. To weigh the water contained, I made use of the first six weights of the series of the preceding paragraphs for the multiples of the litre.

The double décalitre (water at 13°.5 ; correction at 15.510 *gms.* :)
Water + 15.510 *g.* = 19999.888 — 0 = 19999.888.
20 *l.* real value = 19.999888 *l.*

The décalitre (water at 15° ; correction 8.610 *g.* :)
Water + 8.610 *g.* = 9999.961 *g.* — 2.497 = 9997.464 *g.*
10 *l.* real value 9.997464 *l.*

The half décalitre (water at 14°.5 ; correction 4.152 *g.* :)
Water + 4.152 *g.* = 5000.145 — 0.025 = 4,999.9895
5 *l.* real value = 4.9999895 *l.*

The double litre (water at 14°.3 ; correction 1.637 *g.* :)
Water + 1.637 = 1999.9298 — 0.412 = 1999.5178.
2 *l.* real value = 1.9995178 *l.*

The litre (water at 14°.0 ; correction 0.800 *g.* :)
Water + 0.800 = 1000.009 — 0.299 = 999.7019 *g.*
1 *l.* real value 0.9997019 *l.*

The half litre (water at 13°.5 ; correction 0.387 *g.* :)
Water + 0.387 = 500.000 *g.* — 0.123 = 499.878 *l.*,
0.5 *l.* value 0.499878 *l.*

The double décilitre (water at 13°.5 ; correction 0.155 *g.* :)
Water + 0.155 = 200.000 *g.* — 0.135 = 199.865
0.2 *l.* real value = 0.199865 *l.*

The décilitre (water at 13°.5 ; correction 0.078 *g.* :)
Water + 0.078 *g.* = 100.000 — 0.042 = 99.958
01. *l.* real value = 0.099958 *l.*

The demi-décilitre (water 13°.5 ; correction 0.039 *g.* :)
Water + 0.039 = 50.000 *g.* — 0.001 = 49.999.
0.05 *l.* real value = 0.49999 *l.*

The double centilitre (water at 13°.5 ; correction 0.016 *g.* :)
Water + 0.016 = 20.000 *g.* — 0.006 = 19.994.
0.02 *l.* real value 0.019994 *l.*

The centilitre (water at 13°.5 ; correction 0.008 *g.* :)
Water + 0.008 = 10.000 *g.* — 0 = 10.000 *g.*
0.01 *l.* real value = 0.010000 *l.*

If we wish to calculate these capacities directly, the following elements may be used: At the commencement of this verification we had for barometric pressure, 764.40 *mm.* at 13°.0 or H_0 = 762.79 ; hygrometer at the dew-point, 4°.5 f = 6.7 mm. ; the temperature of the air 13°.0. At the end of this verification we had: for barometric pressure 763.95 mm. at 13°.5 or H_0 = 762.34 ; hygrometer at the dew-point, 4°.5 f = 6.7 mm. ; the temperature of the air 13°.0.

It will be necessary to find the expansion of each of the measures, as well as the volume of each of the weights which have been used, knowing that the six gilt standard brass kilogrammes have all the same volume.

§ 4. *Pewter measures of capacity.*—The three series, each one of eight measures, being only the usual legal forms for liquids, have not been verified anew, because they had been stamped by the verifiers of weights and measures; each of these series commences with the double litre and ends with the centilitre.

§ 5. *Tin measures.*—The two series of which these measures are composed are used, one with a straight handle for the sale of milk; the other, with a curved handle, for the sale of oil; the measures intended for the sale of table oil bear the mark M., (manger,) and those which are intended for lamp oil are marked B., (bruler.) All these measures bear the legal stamp of the verifier of weights and measures.

These two series are each composed of seven measures, beginning with the double litre, and ending with the double centilitre.

§ 6. *Wooden measures for corn, grain, &c.*—The wooden measures used for dry materials are of large dimensions and capacity. The series is composed of eleven measures, which are the hectolitre, the half hectolitre, the double décalitre, the décalitre, the half décalitre, the double litre, the litre and the half litre, the double décilitre, the décilitre, and the half décilitre. These measures have been verified and stamped by the inspector of weights and measures. Their verification is made with fine round grain, such as rape seed, or any others of regular shape. For this operation a hopper of linen cloth, bordered with iron, is used; it is fixed against the table of the press for stamping the measures of capacity; the valve attached below the hopper permits the regular flowing out and uniform settling up of the grain employed, either for filling the standard or for receiving that which has been thus measured by the standards, after having taken away the surplus by the aid of the striker, (a bar which serves to strike the measure.) The two wooden measures with feet, the hectolitre and the demi-hectolitre, are used to measure charcoal. The verifiers in their circuit, not being able to have with them such heavy apparatus for verification, have in their travelling case a brass rule, which, at one end, has straight notches, serving as limits to the height and to the diameter which each of these wooden measures ought to have to be of the legal admissible capacity; for a difference of $\frac{1}{100}$ on the dimensions is tolerated considering the shrinking of the wood by drying; but this difference should be in excess for new measures.

CHAPTER IV.

OF MONEY.

The monetary system, joined to the preceding, completes the metrical system; it is united to it through the weight of its unit, the franc, which is five grammes. The series is as follows:

Name and value of the pieces.	Composition.		Weight.		Diameter.
	Exact.	Tolerated.	Exact.	Tolerated.	
20 francs	Gold. 0.9	0.002	6.45161	± 0.002	21 mm.
10 francs	Copper. 0.1		3.22580	± 0.002	20
5 francs			25.	± 0.003	37
2 francs	Silver. 0.9	0.003	10.	± 0.005	27
1 franc	Copper. 0.1		5.	± 0.005	23
5 decimes			2.5	± 0.007	18
2 decimes			1.	± 0 010	15
1 decime			10.	± 0.01	30
5 c.	Pure copper 95		5.	+ 0.01	25
2 c.	Tin 4 / Zinc 1		2.	+ 0.015	20
1 centime			1.	+ 0.015	15

Observations.—According to the diameter of the piece the length of the metre is found by putting edge to edge. 19 pieces of 5 f. + 11 pieces of 2 fr.; 20 pieces of 2 f. + 20 pieces of 1 fr.; 20 pieces of 5 c. + 20 pieces of 1 fr.; 29 pieces of 5 c. + 7 pieces of 10 fr., &c. The pieces of 10 f. and 2 deci. are new; the piece of 2 c. is not yet issued.

The legal value of coinable metals is as follows:

Kind.	Produce.	VALUE OF THE KILOGRAMME.			
		Of alloy at 0.9.		Of pure metal.	
		Coined.	Ingot.	At par.	By exchange.
		Francs.	*Francs.*	*Francs.*	*Francs.*
Gold	620	3,100	3,094	3,444.44	3,437.77
Silver	40	200	198	222.22	220.
Copper	1.	5.			

NOTE.—The notes of 100f., 200f., 500f., and 1,000f., issued by the bank continue this series. The piece or bank note of 50f. (intermediate element) has not yet been created.

Done at Paris, May 5, 1852.

Conservator of the Conservatory of Arts and Trades.

Approved.

A. MORIN,
General of Artillery, Member of the Institute,
Administrator of the Conservatory of Arts and Trades

Nomenclature of the metrical system.

The metrical system has one unit for its basis, is universal and decimal.

From the unit of length all the other units are derived.

In order that this unit might belong equally to all nations, it was taken on the actual dimensions of our globe. It is the ten millionth part of the quarter of the terrestrial meridian.*

This unit of length is called *metre;* to adapt it to the decimal calculation, the metre was subdivided into parts of ten, and those into others ten times smaller; and its multiples are by ten, and those by ten again.

The metre serves as a basis to the other units in the following manner:

The are, or the unit of superficial measure, is a square the size of which is ten metres long.

The stère, or the unit of cubature for wood, is a cubic metre.

The *litre*, or the unit for gauging vessels for dry or liquid materials, is a cube, the side of which is one-tenth of a metre.

The *gramme*, or the unit of weight, is the weight of a cube of $\frac{1}{100}$ of a metre, or one cubic centimetre of distilled water, at its maximum density, (4° c.,) weighed in a vacuum.

The *franc*, or the monetary unit, is 5 grammes of an alloy composed of 9 parts of fine silver and 1 part of pure copper, and made under guaranty.

All these units are multiplied and divided like the metre. To systematize the denomination, we have taken the names of the multiples from the Greek language, and those of the divisors from the Latin, thus: *deca* for 10, *hecto* for 100, *kilo* for 1,000, *myria* for 10,000, *deci* for 0.1, *centi* for 0.01, *milli* for 0.001. These names are written before that of the kind of unit in question; thus, we say 1 decametre for 10 metres, kilometre for thousand metres, kilogramme for thousand grammes, centimetre, centilitre, centigramme for 0.01 of metre, of litre, and of gramme.

Each of these multiples or divisors may in the calculation be taken for principal units. It is thus that the kilometre serves as unit of topographical length for railroads; the millimetre for micrometrical measures; the kilogramme for the weights of commerce, &c. Custom has adopted all these Greek and Latin names only for the

* The length taken, it is said, is not precise; it is further added, that it can never be so, since the meridians are not equal. Let us see, then, what is the value of this incorrectness. The unit taken equals 443. 296 lines; the error, according to Delambre, would be +0. 032 lines, or only 0. 026 lines. M. Puissant found it a little greater. This point is not settled. As to the inequality of the two meridians, that of Peru appears, thus far, to give the largest result: it is 443. 44 lines, which is the length of the provisional metre. The difference is + 0. 144 lines.

These differences are of no account in commerce, for much greater are tolerated in the verification. Regarding the wants of science, they only demand the perfect preservation of the platinum standard deposited in the archives, and the possibility of comparison without alteration. This preservation is also assured by the length of the sexagesimal seconds pendulum at Paris, which is 440. 5595 lines = 0. 9938267 of a metre, according to Borda, at the temperature of 0°, and in a vacuum, or 9. 993846, according to other more recent determinations.

metre, the litre, and the gramme. Those which belong to the *are* are only the hectare and the centiare.

Those which relate to the stère are the decistère and the centistère.

For the franc, the names of decime and centime, taken for 0.1 f., 0.01 f., are the only ones that are made use of.

APPENDIX No. 19.

Letter of W. H. Vesey, esq., United States consul at Havre, transmitting books and instruments illustrative of the French system of gauging.

AMERICAN CONSULATE,
Havre, September 22, 1853.

DEAR SIR: I have the honor to acknowledge receipt of your letter of the 16th of August, and, agreeably to your desire, have obtained a graduated gauge, in iron, the same as used by the officers of the *contributions indirectes*, of this country, for establishing the capacity or measures of casks, which I forward by this opportunity. I also forward a ribbon measure, used for the same purpose, but it is seldom or never had recourse to, except for the ascertaining the measures of casks of immense size. They are accompanied by two works, printed under the authority of this government, which, I believe, supply the fullest information on the system practiced by the official gaugers of this country, and which serve as their guide in all cases of difficulty or dispute.

The gauge is calculated to measure casks of the capacity of a tun, or four hogsheads, and the mode of using this instrument (which you will perceive is in three pieces) is, first, after placing the cask bung up, and inserting the instrument in an oblique direction to the lower part of the right hand end, then by taking the number on the gauge, at the centre of the *bunghole* in a line with the inner part of the stave, you will ascertain the number of *litres* the cask is capable of containing. If in adopting the same method on the other end of the cask a different number should be found, the two must be added together and the *mean* taken as the measurement.

There are two sides of the gauge graduated: that having the greater number of scores or lines, shows the quantity in *litres*, indicating by the number 1, (which can only apply to very small casks,) that its contents are 10 *litres;* the second line indicates 20, and every succeeding line the additional quantity of 10 litres, up to 100, which indicates 1,000 litres. The *fractional parts between the two lines* are computed as accurately as possible by the eye.

The other marked side of the gauge is used for the purpose of ascertaining the extent of leakage, but as it would be impossible to exemplify the manner of arriving at this, unless a *cask* could accompany this note, I beg to refer you to page 124 of the accompanying "Manual" for fuller information.

For the cost of the instrument and books now transmitted, as well as

a trifling gratuity to the person who procured them for me, I shall take the liberty to draw upon you in a few days.

I have the honor to be, &c.,

W. H. VESEY.

A. D. BACHE, Esq.,
Superintendent Weights and Measures.

APPENDIX No. 20.

Letter of D. K. McRae, esq., consul at Paris, transmitting books, papers, and instruments in relation to the French system of gauging.

UNITED STATES CONSULATE,
Paris, September 26, 1853.

DEAR SIR: I had the honor, some time since, to receive your favor of the 16th August last, and immediately set about to supply myself with the means of fulfilling your requests.

I have this day forwarded by the Humboldt, which sails on the 30th, three volumes of the "Annales des Contributions indirectes et des Octrois," one "Manuel Alphabetique," one "Municipale Revue et Gazette réunis," two volumes "Manuel de l'Employé de l'Octroi," a "Table of Directions," a "Note Instructive, Directions Generales des Douanes," with three reports.

These are all packed in a box to your address, with two different instruments which are used here. You will find in the small tin boxes an instrument which is very delicate, and I have been requested to ask you to open them with great care; this I have made a memorandum of on the box.

I am very much indebted to Mons. Vattemare for efficient aid in procuring these things, and through his instrumentality the cost of all the articles does not exceed forty francs, which you can remit me through the State Department, on which I will draw at the end of six months, in settlement of accounts.

I am but little versed in mechanics of any kind, and therefore do not know if I have been able to render you a service, but I shall be gratified if I have done so. I shall be further pleased if, when your report is made, you will place it in my power to reciprocate a kindness of Mons. Vattemare, who is engaged in his system of international exchange, and is always happy to contribute and receive acts of courtesy between the United States and France.

I enclose, with this—

Letter of the Prefect of the Seine.

Letter of Mons. Vattemare.

Statement of instruments used in France.

The bill for the instruments Mons. Vattemare has not handed me, but he informs me it is 25 francs.

I have the honor to be, sir, very respectfully, yours,

D. K. McRAE,
United States Consul.

APPENDIX No. 20. (1.)

Letter from M. Alex. Vattemare, agent of international exchanges, to D. K. McRae, esq., consul at Paris, in relation to the French system of gauging.

PARIS, *September* 7, 1853.

MY DEAR SIR: In reply to your honored letter of the 2d instant, I have the pleasure to communicate to you the result of my inquiries relative to the method used and instruments required by the official gaugers in France, viz:

The custom-house.
Indirect contributions.
The city tolls.

The best works, and in fact the only ones, used by the officers of the above bureaus (although not officially acknowledged) for gauging and weighing, are:

1. D'Agar's Manuel des droits réunies, 1 vol. 8vo., Paris, 1813.
2. Alonard —— —— Contributions indirectes, 1 vol.
3. Girard Manuel des Contributions et de l'octroi, 1 vol.
4. Bonnet, Manuel de l'employé de l'octroi, 2 vols. 8vo., 1852.
5. Dourstber's Dictionaire universel des poids et mesures, 1 vol. 8vo., Bruxelles, 1840.
6. Dareste Annales des Contributions indirectes, 3 vols. 8vo., Paris, 1836, 1840, 1844.
7. Note instructive sur la gauge á ruban fabriqué d'aprés le noveau systéme metrique, Paris, 1807.
8. Circulaire *du* 29 *Aout*, 1853, instructions sur l'emploi de l'alambre partatif adopté pour la verification des vins.

Instruments.

1. Gauge, in parts.
2. Gauge hooks.
3. Gauge ribbon.
4. Areometer.
5. A portable alembic for the verification of wines, (just adopted.)

Of the books, I have already procured D'Agar's Manuel, Dareste's Annales, Note Instructive, the Circulaire de 29 Aout, 1853, and Bonnet's Manuel de l'employé de l'octroi. I have added to these a copy of No. 80 of the *Gazette Municipale*, of August 16, 1851, containing a very interesting article on (dépotoir) gauging of vessels, by Mr. Lair, conservator of the entrepôt (magazine) of liquids.

I found every officer of the above mentioned bureaus most readily disposed to give me every possible information; it is from them I learned the titles of the books and names of the instruments used by them. But as neither of the books, &c., are official except the note and circular, I could not, without the authorization of the chief clerk, just now out of town, obtain these books, and was obliged to buy Bonnet's Manuel,

although it is against my rule to procure anything except by way of exchange; but considering the nature of the object, the proposed aim, and my desire of being agreeable to you and Professor Bache, I have done this with pleasure. Yet you will remark that the system of international exchange has been taken into consideration, for the booksellers as well as the instrument makers have, without my asking it, reduced their prices more than 25 per cent. of their regular prices. The following is, as much as I have been able to ascertain, the price of the wooden gauges:

Small gauge and parts	18 francs.
Large gauge and parts	28 francs.
Portable alembic, for the verification of wines	20 francs.

As for the Girard, Alonard, and Dorsther, (the two former out of print long ago, and the last published in Belgium,) I will do my best to procure them. They are said to be very valuable for the intended purpose. The four accompanying volumes are presented (the Annales des Contributions) by the Hon. M. Dupont, member of the legislative chamber and publisher of this work; the other proceeds from the Department of the Treasury.

The enclosed is the price of the iron instruments used by the officers of the custom-house, and "*contributions indirectes*" for gauging and measuring, manufactured by Mr. Meyer, Faubourg St. Antoine, No. 69, for the government. This bill is made in accordance with the deduction granted in behalf of our system.

Placing myself, my humble means and influence, at your disposal, and that (of our) of your great and noble country, whose kindness and hospitality is forever engraved on my grateful memory, I have the honor to be, my dear sir, your very humble and devoted friend and servant,

ALEXANDER VATTEMARE.

Monsieur McRea,
United States Consul, Paris.

APPENDIX No. 20. (2)

Letter from Mons. M. F. Hausemann, Prefect of the Seine, to Mons. Alex. Vattemare, in relation to the instruments used in gauging tuns at the gates of Paris.

1st. Division 2, 267.—*2d. Bureau.—Nos. of registry of the secretaryship of the bureau* 2,267.—*Objects of the letters or resolutions.—Tolls.—Gauges in use for this service.*

Prefecture of the Department of the Seine,
Paris, September 16, 1853.

Sir: You have requested to have placed at your disposal some models of instruments which are made use of at the barriers of Paris, by the employés of the tolls, for gauging tuns.

I recognize all the advantages which exchanges of different types can offer when the instruments are determined by the laws of the country, or, still further, when they regulate commercial conventions; but I must observe to you that the gauge of the *octroi* of Paris offers nothing of this kind. It is entirely special, and is only in use at the barriers. Commerce neither knows it nor its use; it is not to be found with any merchant of gauging or weighing instruments; and is made upon a model given by the administration.

Matters are thus, because the *octroi* does not determine the taxable quantity; the tax gatherer is obliged to declare it, and the employés verify the exactness of the declaration, but they are not qualified to give to this verification an authentic character. If the law had given to them the constitution of the quantities to submit to the customs, it would have made expert juries, and would have obliged them to employ only the measures established in virtue of the law.

The gauge in use at the barriers is only definitive as a means furnished by the administration to its employés, to approach, as nearly as possible by the inspection of casks, a knowledge of their contents. It is yet left for estimation, and cannot be considered as an instrument of precision which could be sent abroad.

Under these circumstances, sir, I find myself obliged to decline your request.

Accept, sir, the assurance of my very distinguished consideration.

M. F. HAUSEMANN,
Prefect of the Seine.

Monsieur VATTEMARE,
Rue de Clichy 56.

APPENDIX No. 20. (3.)

Price current of the instruments employed for the use of the indirect contributions of the custom-house.

Gauges in three parts, divided to the decalitre and centimetres, one	4.70
Gauges flat, with rings, 1 division	3.50
Gauges flat, with rings, 2 divisions	4.00
Gauges, square for gauging boats, double meters	35.00
Gauges or plummets to verify casks of oil	50.00
Plummets for sugar, with relative chambers	25.00
Plummets, enclosed in cane	12.00
Plummets, enclosed in bamboo	10.00
Plummets, enclosed in form of bamboo	9.00
Plumb-lines, folding with eight branches, one	.50
Plumb-lines, centesimally divided	.40
Metres divided with spare pieces, for wood	6.50

Metres in copper for gauges, for boats	2.50
Pincers to lead cooked articles, No. 1	35.00
Pincers to lead cooked articles, No. 2	50.00
Lead to strike 10 ± the thousand	10.00
Bores (assorted)	1.40

Utensils for the use of the Octroi.

Plumb-lines with grades, No. 1	1.40
Plumb-lines with grades, No. 4	
Plumb-lines, No. 6, for forage, large	4.00
Plumb-lines, for forage, small	3.75
Plumb-lines, for cotton	2.00
Plumb-lines, for glass	2.50
Plumb-lines, for small tubs	4.50
Plumb-lines bent for boats	8.00
Plumb-lines, in cross, for stone, small	5.00
Plumb-lines, in cross, for stone, large	6.00
Plumb-lines (plottes)	3.50
Quarries, large	3.50
Quarries, small	3.00
Gauges with divisions	9.00
Instruments for taking the thickness of (doms)	.75
Scissors for unpacking	1.50
Hammers, strong, with pincers	2.75
Gimlets with iron handles, large	1.25
Gimlets with iron handles, medium	1.30
Hammer with screw	2.50
Bores for casks	5.00
Bores for boats	7.00
Pincers to solder	50.00
Leads at 10 the thousand	10.00
Leads strong, 80 the 100 kilos	
Axes for splitting wood	3.00
Compass of large thickness	14.00
Compass of small thickness, tinned	9.00
Axes for (margerer) wood	14.00
Gauges for grain	2.00
Meters simple, square	3.50
Meters double, not jointed	3.50
Meters double, jointed	6.50

LOUIS MAYER,

FAUBOURG ST. ANTOINE, 69.

	Mean		61.0		0.00098

NOTE.—One division of the micrometer used in the observations made in May was equal to one thirty-thousandth part of an inch; in October, one division of the micrometer was equal to one ten-thousandth part of an inch. Previous to the comparisons in October, the stops for the yard on the dividing machine had been frequently verified, and their distance found to be one ten-thousandth of an inch greater than the standard yard on the Troughton scale, as confirmed by the above comparisons. Equal weight is therefore attached to the comparisons in May and October, notwithstanding the less number of observations on the Troughton scale recorded with the latter.

Number of observation.	Temperature.	Length of vara.	Reduced to 62° by difference of expansion of iron and brass.
	Fahr.	*Inches.*	*Inches.*
1	57.5	32.9703	32.9698
2	57.5	663	658
3	58.5	662	658
4	58.5	664	660
5	55.3	695	687
6	55.5	700	692
7	57.3	693	687
8	61.8	682	682
9	58.7	705	701
10	61.1	685	684
11	61.3	676	675
12	61.8	674	674
Means ..	58.7	32.9684	32.9680

The probable error of any single observation is ± .00106, and of the mean of all the observations ± .0003.

The comparison was made on the duodecimal side of the vara. The division lines were, however, so coarse that the edges of the divisions were taken as the points for the comparison. Assuming the length of the decimal and duodecimal sides to be the same, the length of the vara at the mean temperature of the observations 58°.7 Fahrenheit is 32.9682 inches.

APPENDIX No. 23.

Comparison of the half-bushel measures.

No. of standard.	Date.	Barometer.	Temp. of water.	Difference from standard.	Corrections for temp.	Result: — too large, + too small. Single.	Mean.	Corrected mean.	Destination.

APPENDIX No. 26.

Experiments on the weight of various liquids at different temperatures.

With a view of ascertaining the practicability of gauging by weight, experiments were made on the weight of various liquid articles of commerce, such as oils, syrups, &c., at different temperatures. The substances were weighed in glass bottles, containing rather more than a quart, with narrow necks, the tops of which were ground so as to admit of being accurately closed by a small plate of glass. The weighings were made with one of the middle-sized balances furnished to the States.

The bottles, with the plates, were first accurately weighed, (see Table I, A; they were next filled with water near the temperature of 62° Fahr., or 17° Cent., and thus weighed, the operation being repeated several times, (Table I, B.) After being carefully dried, they were filled with samples of the following substances, furnished by Mr. Charles Ellis, druggist, of Philadelphia:

Series I. Castor oil, olive oil, linseed oil, lard oil.

Series II. Spirits of turpentine, Barbadoes tar, copaiba.

After each weighing a portion of the liquid was removed from the bottle for the purpose of inserting a thermometer. The temperature of the room being at all times very nearly the same as that of the substances in the bottles, the temperatures of the latter thus obtained were not supposed to differ materially from the actual temperatures during the weighings. A Fahrenheit thermometer by Green was used at first, for which a centigrade thermometer by Griener, reading to two-tenths of a degree, was afterwards substituted. The two instruments were carefully compared, and in the table of results the readings of the former were converted into the centigrade scale. Table 1. C and D, gives an abstract of the weighings, the weight being in ounces, troy.

The barometer was noted in every instance, but the correction for the change in buoyancy of the air is entirely masked by the uncertainty of temperature. The greatest buoyancy correction would amount to but 0.0005 of an ounce, while a variation of one-tenth of a degree of the centigrade thermometer corresponds to 0.0014 of an ounce on the average.

The experiments were made by *Mr. Woods Baker* up to April 16, 1852, when they were taken up by *Mr. E. Liomin.*

A discussion of these first experiments showed that a desirable degree of accuracy could be reached, and that the principal difficulty consisted in ascertaining the true temperature of the liquid.

In making additional experiments, therefore, bottles were procured having thermometers inserted into them in such a manner that the bulb occupied nearly the middle of the vessel, the stem coming out at the side, so as to have the scale entirely outside, the top of the neck remaining unobstructed. These thermometers were graduated to the

centigrade scale, and carefully compared with the Greiner standard. The table of corrections thus obtained is given with the experiments. (See table II, A, B, C.)

With these vessels the experiments were repeated on some of the substances previously used, two of them (castor oil and copaiba) being those with which very regular results had been obtained, and two others (lard oil and spirits of turpentine) those that had given irregular results. In the case of the latter substance, this was doubtless owing to an increase of density by evaporation of volatile parts; while the experiments with lard oil showed some irregularity near the point of congelation, as might be expected. The following substances experimented on were obtained from Mr. Ben. R. Smith, of Philadelphia, viz: East India castor oil, copaiba, refined English castor oil, lard oil, spirits of turpentine.

In addition to these, a number of samples of molasses were procured by Prof. R. S. McCulloh, and analyzed by him in reference to the amount of crystallizable sugar contained in them. The brief notes of their importation and results of the analyses are given below.

Table II D and E gives the weighings made with these substances. All the experiments made are graphically represented on plate No. 3, each series having been multiplied by a constant factor, so as to obtain a convenient scale, and make the rates of expansion readily comparable by the eye.

The annexed table of results gives the *specific gravity* and *weight of one gallon* of the substances experimented on at 15° C., and the rate of expansion for 1° C. within the range of temperature observed, or within which uniform results were obtained. In making the reductions, the specific gravity of water is assumed as unity at 15° C., and the weight of one gallon of water at that temperature equal to 8.3316 pounds avoirdupois, it being equal to 8.3389 pounds at the maximum density of water, and *less* in the proportion of 1.000875 to 1 at 15° C., according to Despretz, whose table was also used in reducing the observed weights of water to 15° C. For the expansion of the glass vessels, allowance has been made at the rate of 0.0000258 for 1° C.

Table of results of weighings.

Substance.	Specific gravity at 15° C.	Weight of one gallon at 15° C.	Rate of expansion for 1° C.	Between temperatures.

Results of the analysis of samples of molasses; by Prof. R. S. McCulloh.

The cane or crystallizable sugar in each was determined by the method of circular polarization of light. The proportion of water was obtained by dessiccation. It is difficult, however, to know when this is done completely, or to perform it, even with the aid of the air-pump, without liability to chemical change or decomposition. The results, therefore, are somewhat uncertain, and only approximate.

The solid matter other than cane sugar, being residual, is given by subtraction. The specific gravity is in each instance referred to that of water as unity at its maximum density.

No. I. Gimbernat & Esconaza, importers; by Narraguages, St. John's, Porto Rico; Muscovado.

Flavor sweet; specific gravity, 1.3640 at 45° Fah.; per cent. of sugar, 49.86; other solid matter, 21.51; water, 28.63.

No. II. Yznaga & Etulam, importers; by Oleronzaza, Cuba; Muscovado.

A sediment in the bottom of the bottle; specific gravity of the supernatant molasses, 1.3663 at 45° Fah.; flavor sweet; per cent. of sugar, 48.78; other solid matter, 23.93; water, 27.29.

No. III. G. S. Stephenson, importer; by Edward, Cardenas, Cuba; clayed.

Flavor sweet; specific gravity, 1.3615 at 45° Fah.; per cent. of sugar, 51.35; other solid matter, 20.86; water, 27.79.

No. IV. Agmar & Co., importers; by Rose & Matilde, Ponce, Porto Rico; Muscovado.

Flavor sweet; slightly burnt; specific gravity, 1.3675 at 45° Fah.; per cent. of sugar, 57.06; other solid matter, 16.64; water, 26.30.

No. V. Wardwell & Knowlton, importers; by John Bird, Sagua a Grande, Cuba; Muscovado.

Flavor sweet; specific gravity, 1.3661 at 45° Fah.; per cent. of sugar, 49.93; other solid matter, 22.84; water, 27.23.

No. VI. Wooding, importer; by Xenephon, Cardenas, Cuba; Muscovada.

Flavor sweet, slightly acid; specific gravity, 1.3626 at 45° Fah.; per cent. of sugar, 48.35; other solid matter, 23.70; water, 27.95.

No. VII. M. Taylor & Co., importers; by Azores, Sagua la Grande, Cuba; clayed.

Flavor sweet, slightly acid; specific gravity, 1.3646 at 45° Fah.; per cent. of sugar, 50.90; other solid matter, 21.85; water, 27.25.

* Fire having been made in the room, this set of weighings was made three hours afterwards.
† Olive oil slightly congealed.
‡ Lard oil slightly congealed.
§ Some appearance of congelation still remaining in the lard oil; it had the appearance of melting snow.

a This weighing is to be rejected, a bubble of air having appeared after it was made.

b Mercury below scale of thermometer.

c April 19. Bubbles of air were found in the bottles containing molasses Nos. II, III, and IV. They were carefully weighed before and after removing the air, and the differences were found to be, at the same temperature: for No. II, 0.0247 oz.; for No. III, 0.0144 oz.; for No. VI, 0.0326 oz.

It is uncertain how long these bubbles may have been in the bottles, which are badly formed, being too flat on top, and not allowing the air to escape.

d Molasses Nos. II and VI had fermented so much that it was impossible to remove the foam.

ABSTRACT OF CONTENTS OF REPORT.

Weights and measures for the States, pages 2—7. Weights and measures for the custom-houses, pages 7—9. Weights and measures, miscellaneous, pages 9, 10. Division and comparison of standard yards, pages 11—16. Comparisons of foreign standards with those of the United States, pages 17—19. Balances for the States, pages 20—23. Weights, measures, and balances, for foreign governments, pages 23—29. Hydrometers for the custom-houses, pages 29—33. Gauging, pages 33, 34. Laws of the States of the Union relating to weights and measures, pages 34—85. Appendix, pages 88—208.

CONTENTS OF THE APPENDIX

TO THE

REPORT ON WEIGHTS AND MEASURES.

PART I.—RELATING TO OFFICE BUSINESS.

Page.

No. 1. Resolution of Congress providing for the distribution of weights and measures 88

No. 2. Act of Congress of 1799 directing a semi-yearly comparison of weights and measures used in custom-houses 89

No. 3. Act of Congress of 1825 authorizing the Secretary of the Treasury to adopt a new hydrometer for ascertaining the proof of liquors in the custom-houses 89

No. 4. Circular to the governors of States in regard to balances 89–90

No. 5. Form of the labels accompanying standards of weight and measure issued from the office of weights and measures 90

No. 6. List of reports made in relation to analyses of sugars, molasses, &c., and hydrometers for the custom-houses 91

No. 7. Report of Woods Baker, esq., upon the delivery of hydrometers, and the condition of the standard weights and measures furnished to the custom-houses 91–104

No. 8. Table showing the States, foreign governments, &c., to which balances have been delivered, with those on hand ready for delivery, and the number yet to be completed 104–105

No. 9. List of States and custom-houses to which standard weights, measures, and balances have been furnished, December 31, 1856 106–109

No. 10. Miscellaneous distribution of standard weights and measures 110

PART II.—LAWS OF THE STATES IN REGARD TO WEIGHTS AND MEASURES.

No. 11. Circular to governors of States requesting copies of laws on weights, measures, and gauging 111–112

No. 12. Titles of laws passed by the several States of the Union in relation to weights and measures during the period intervening between the years 1819 and 1857, with statements showing their authenticity 112–127

No. 13. Letter of E. R. Potter, esq., of Providence, R. I., giving a brief account of the legislation of that State prior to 1819 127–128

No. 14. Table showing the weight of a bushel of different grains and other substances, as established by law in the different States and Territories, in pounds avoirdupois 129

PART III.—SCIENTIFIC PAPERS, REPORTS, CORRESPONDENCE, AND TABLES.

Page

No. 15. Circular to the ministers of the United States in England, France, the Netherlands, Prussia, and Belgium, asking for information in regard to the methods of gauging officially practiced in those countries, and correspondence in relation thereto 130

(1.) Papers received from Hon. Abbott Lawrence, United States minister at London: 1. Letter of Thomas Memanter, esq., of the Board of Customs, London; 2. Memorandum of R. Troughton, esq., chief officer of the Gauging Department of the Customs 131-133

(2.) Letter received from Hon. George Folsom, chargé d'affaires at the Hague, enclosing one to him from M. Van Borp, Minister of Finance of the Netherlands 133-135

(3.) Papers received from the government of Prussia, comprising a translation of the official instructions for gauging casks, by M. Von Düesberg, Minister of Finance, with table 135-137

No. 16. Letter of M. Moreau, Sub-director of International Exchanges, transmitting a complete collection of standard weights and measures as a present from France to the United States 137-138

No. 17. Letter of M. Silbermann, Superintendent of the Conservatory of Arts and Trades of France, to M. Vattemare, agent of International Exchanges, in relation to the standards of the United States and France. 138-148

No. 18. Letter of General A. Morin, Administrator of the Conservatory of Arts and Trades, transmitting the report of M. Silbermann upon the French weights and measures presented to the United States 148-169

No. 19. Letter of W. H. Vesey, esq., United States consul at Havre, transmitting books and instruments illustrative of the French system of gauging 169-170

No. 20. Letter of D. K. McRae, esq., consul at Paris, transmitting books, papers, and instruments in relation to the French system of gauging 170

(1.) Letter from M. Alex. Vattemare, Agent of International Exchanges, to D. K. McRae, esq., consul at Paris, in relation to the French system of gauging 171-172

(2.) Letter from Mons. M. F. Hausemann, Prefect of the Seine, to Mons. Alex. Vattemare, in relation to the instruments used in gauging tuns at the gates of Paris 172-173

(3.) Price current of the instruments employed in gauging casks in the French custom-houses 173-174

No. 21. Table showing the result of the comparisons of standard yard measures. 175

No. 22. Comparisons of foreign standards with those of the United States 176-181

No. 23. Comparison of the half bushel measures 181-185

No. 24. Comparison of the gallon measures 186-189

No. 25. Comparison of the parts of gallon measures 190-196

No. 26. Abstract of experiments on the weight of liquids at different temperatures 197-208

INDEX.

A.

Adams, Hon. John Quincy. Abstract of report on weights and measures, 1821, 34—36.
Alabama. Abstracts of laws on weights and measures, 36, 65, 66; Titles of laws, 122; Standards destroyed by fire and replaced, 5.
Alexandria, Virginia. Standards replaced, 9.
Apples, Dried. Weight of the bushel, by law, in different States, 129.
Arkansas. Abstracts of laws on weights and measures, 81; Titles of laws, 125.
Astoria, (custom-house,) supplied with standards, 8.

B.

Bache, Professor A. D. Examination of standards, 9.
Baker, Woods. Observations on gauging, 2; Delivery of hydrometers, 2; Examination of standards, 9, 102, 103; Death, 2.
Balances. Distribution, 8, 20—23, 104, 105; Number made and on hand, 105; Description of balance suitable for testing county standards, 7.
Barley. Weight of the bushel, by law, in different States, 129.
Beans. Weight of the bushel, by law, in different States, 129.
Blue grass seed. Weight of the bushel, by law, in different States, 129.
Bran. Weight of the bushel, by law, in different States, 129.
Buckwheat. Weight of the bushel, by law, in different States, 129.
Bushel. Capacity of United States standard, 5; Weight of grain, &c., by law, in different States and Territories, 129.

C.

California. Supplied with balances, 8; With yard measure for Land Office, 10; Abstracts of laws on weights and measures, 82, 83; Titles of laws, 126.
Castor beans. Weight of the bushel, by law, in different States, 129.
Circulars. Sent with hydrometers to custom-houses, 92, 93; To United States revenue officers, with Tralles' hydrometer, 93, 94; To governors of States, requesting copies of laws, 111, 112; Relative to balances, 89, 90; To United States ministers in Europe relative to gauging, 130.
Clover seed. Weight of the bushel, by law, in different States, 129.
Coal. Weight of the bushel, by law, in different States, 129.

Comparisons, (*Office.*) Of British yard with United States standard, 17, 176, 177; Of British pound with United States standard, 17, 177; Of Silbermann's with committee kilogramme, 178; Of Fortin's with committee kilogramme, 179; Of Mexican vara with United States standard yard, 180; Of United States yard measures, 175; Of United States half bushel measures, 181—185; Of United States gallon measures, 186—189; Of United States half gallon, quart, pint, and half pint measures, 190—196.

Connecticut. Abstracts of laws on weights and measures, 35, 48, 49; Titles of laws, 116.

Copaiba. Weight at different temperatures, 202.

Corn, (*shelled and unshelled.*) Weight of the bushel, by law, in different States, 129; Of corn meal, 129.

County standards. Description of sets suitable for, 6, 7.

Custom-houses. Description of standards provided for, 7, 8; To be compared semi-annually, 89; Distribution of standards, 8, 106—109; Condition of sets in use, 9, 102, 103; Sets to be supplied, 9, 106—109; Hydrometer adopted, 89; Provision for supply of instruments, 2; Number of hydrometers furnished, 29—32, 95, 96.

Cwt. (100 *lbs.*) Adopted, by law, in different States, 85.

D.

Delaware. Abstracts of laws on weights and measures, 35, 57—59; Titles of laws, 120.

District of Columbia. Abstracts of laws on weights and measures, 36.

Dividing engine. Description of, 11—15.

E.

Engineer Bureau. Supplied with standard yard, 10.

Expansion. Of brass, for 1° Fahrenheit, 5.

F.

Flaxseed. Weight of the bushel, by law, in different States, 129.

Florida. No laws on weights and measures, 65.

Foster, Captain J. G., U. S. Corps of Engineers, 2.

France. United States standards presented, 23—27; Standards received from, 28, 137, 138, 143—147; Verification of standards, 148—166; Remarks on adoption of the metre, 141, 142.

G.

Gallon. Capacity of United States standard, 5; Office comparison of United States gallon measures, 186—189.

Gauging. Defective methods in use, 103; Collection of data for rules, 33, 34, 130; System in London, 131—133; in Prussia, 135—137; in Netherlands, 133—135; in France, 169—174.

Georgia. Abstracts of laws on weights and measures, 35, 64, 65; Titles of laws, 122.

Georgetown, S. C. Standards destroyed, 9.

Great Britain. United States standards presented to, 23.

H.

Hair, (*plastering.*) Weight of the bushel, by law, in different States, 129.
Half bushels, (*United States.*) Office comparison of, 181—185.
Half gallons, (*United States.*) Office comparison of, 190—196
Half pints, (*United States.*) Office comparison of, 190—196.
Hemp seed. Weight of the bushel, by law, in different States, 129.
Hundred weight, (100 *lbs.*) Adopted, by law, in different States, 85.
Hydrometers. Law adopting Tralles', 89; Supply procured and distributed, 2, 29—32, 91—96; Additional purchase, 10, 96; Opinions of port surveyors, 103; Comparison of old instruments, 96—99.

I.

Illinois. Abstracts of laws on weights and measures, 36, 74—76; Titles of laws, 125.
Indiana. Abstracts of laws on weights and measures, 36, 73, 74; Titles of laws, 124
Indian Corn. Weight of the bushel, by law, in different States, 129.
Instructions. For using hydrometer, 93; For use and preservation of standards, 100, 101.
Iowa. Abstracts of laws on weights and measures, 76, 77; Title of law, 126; Yard measure supplied for land office, 10.

K.

Kansas. Yard measure supplied for land office, 10.
Kilogramme. Verification of standards presented by France, 156—162; Office comparison of Silbermann's with committee kilogramme, 18, 19, 178; Of Fortin's with committee kilogramme, 19, 179.
Kentucky. Abstracts of laws on weights and measures, 35, 68, 69; Titles of laws, 124.

L.

Labels. Accompanying standards, Appendix No. 5.
Laborers. Number in Office of Weights and Measures, 2.
Laws. Notice of adoption of United States standards, 5; For distribution of standards to States, 88; For comparison of custom-house standards, 89; adopting Tralles' hydrometer, 89; Abstracts and titles of acts relative to weights and measures passed in Maine, 38—41, 112, 113; New Hampshire, 35, 41, 42, 113, 114; Vermont, 35, 42, 43, 114; Massachusetts, 35, 44—46, 114; Rhode Island, 35, 46, 47, 115, 116, 127, 128; Connecticut, 35, 48, 49, 116; New York, 35, 49—53, 116—118; New Jersey, 35, 53, 54, 118; Pennsylvania, 35, 54—57, 118—120; Delaware, 35, 57—59, 120; Maryland, 35, 59—61, 120; Virginia, 35, 61, 62, 120, 121; North Carolina, 35, 62, 63, 121; South Carolina, 35, 64, 121, 122; Georgia, 35, 64, 65, 122; Alabama, 36, 65, 66, 122; Mississippi, 36, 66, 67, 122, 123; Louisiana, 36, 67, 68, 123; Texas, 81, 123; Arkansas, 81, 125; Missouri, 36, 79—81, 125; Tennessee, 36, 68, 124; Kentucky, 35, 68, 69, 124; Ohio, 36, 69—72, 123, 124; Indiana, 36, 73, 74, 124; Illinois, 36, 74—76, 125; Michigan, 72, 73, 126; Iowa, 76, 77, 126; Wisconsin, 77—79, 126; California, 82, 83, 126; Minnesota Territory, 83, 127; Territory of New Mexico, 83, 84, 127; Washington Territory, 84, 85, 127.

Litre. Verification of standard presented by France, 163—166.
Louisiana. Abstracts of laws on weights and measures, 36, 67, 68; Titles of laws, 123.

M.

Maine. Abstracts of laws on weights and measures, 38—41; Titles of laws, 112, 113.
Mangel Wurzel. Weight of the bushel, by law, in Maine, 129.
Manual. To accompany hydrometers, notice, 10, 31.
Maryland. Abstracts of laws on weights and measures, 35, 59—61; Titles of laws, 120.
Massachusetts. Abstracts of laws on weights and measures, 35, 44—46; Titles of laws, 114, 115.
McCulloh, Prof. R. S., 2, 91.
Measures. Of length and capacity, description of sets, 4, 7, 8; Distribution to States and custom-houses, 106—109; Miscellaneous distribution, 110; Forms of labels accompanying standards, Appendix No. 5.
Mechanics. Number in Office of Weights and Measures, 2.
Metre. Adoption in France, 141; By other nations, 142; How related to French coins 167; Verification of standard presented by France, 150—156; Expansion of, 28; Nomenclature of metrical system, 168.
Mexican Boundary Commission. Supplied with standard of length, 10.
Michigan. Abstracts of laws on weights and measures, 72, 73; Titles of laws, 126.
Minnesota Territory. Abstracts of laws on weights and measures, 83; Titles of laws, 127.
Mississippi. Abstracts of laws on weights and measures, 36, 66, 67; Titles of laws, 122.
Missouri. Abstracts of laws on weights and measures, 36, 79—81; Titles of laws, 125.
Molasses. Weight at different temperatures, 197—208.
Monterey, Cal. Custom-house supplied with standards, 8.

N.

Naval Academy. Supplied with balance and ounce weights, 10.
Nebraska. Yard measure furnished for land office, 10.
New Hampshire. Abstracts of laws on weights and measures, 35, 41, 42; Titles of laws, 113, 114.
New Jersey. Abstracts of laws on weights and measures, 35, 53, 54; Titles of laws, 118.
New Mexico, (Territory.) Abstracts of laws on weights and measures, 83, 84; Titles of laws, 127; Yard measure supplied to land office, 10.
New York. Abstracts of laws on weights and measures, 35, 49—53; Titles of laws, 116—118.
North Carolina. Abstracts of laws on weights and measures, 35, 62, 63; Titles of laws, 121.

O.

Oats. Weight of the bushel, by law, in different States, 129.
Ohio. Abstracts of laws on weights and measures, 36, 69—72; Titles of laws, 123, 124.
Oils. Weight at different temperatures, 197—208.
Olympia, W. T. Custom-house supplied with standards, 8.
Onions. Weight of the bushel, by law, in different States, 129.
Ordnance and Hydrography, (Bureau of.) Supplied with standards, 9.
Oregon Territory. Balance furnished, 8; Yard measure for land office, 10.

P.

Peaches, (dried.) Weight of the bushel, by law, in different States, 129.
Pennsylvania. Abstracts of laws on weights and measures, 35, 54—57; Titles of laws, 118—120.
Pint measures, (U. S.) Office comparison of, 190—196.
Post Office Department. Furnished with small weights, 10.
Potatoes. Weight of the bushel, by law, in different States, 129.
Pound. Derivation of United States standard, 5; Office comparison of standard presented by Great Britain, 18, 177.
Pyrometer, (Saxton's.) Description of, 15, 16.

Q.

Quart measures, (U. S.) Office comparison of, 190—196.

R.

Rhode Island. Abstracts of laws on weights and measures, 35, 46, 47, 127, 128; Titles of laws, 115, 116.
Reports. On analyses of sugars, &c., and hydrometers, (titles,) 91.
Rye. Weight of the bushel, by law, in different States, 129.

S.

San Diego, Cal. Custom-house supplied with standards, 8.
Scottsville, W. T. Custom-house supplied with standards, 8, 9.
Saxton, Joseph, 2, 8, 11, 15, 16.
Sonoma, Cal. Custom house supplied with standards, 8.
South Carolina. Abstracts of laws on weights and measures, 35, 64; Titles of laws, 121, 122.
Standards, (U. S.) How derived—of length, 4; Of capacity, 5; Of weight, 5; Date of adoption, 5; Resolution providing for distribution, 88; States and custom-houses furnished, 8, 106—109; Form of label accompanying, Appendix No. 5; Presentations to foreign governments, 23, 105; Condition of custom-house sets, 102, 103; Law directing comparison, 89; Description of sets suitable for counties, 6, 7; M. Silbermann's remarks on set presented to France, 139—141; Office comparisons of foreign standards, 17—19, 176—180; Verification of sets presented by France, 148—166; Uniformity in standards recommended, 86, 87.
Sugar beet. Weight of the bushel, by law, in Maine, 129.

T.

Tar, (Barbadoes.) Weight at different temperatures, 202.
Tennessee. Abstracts of laws on weights and measures, 36, 68; Titles of laws, 124.
Texas. Abstracts of laws on weights and measures, 81; Titles of laws, 123.
Timothy seed. Weight of the bushel, by law, in different States, 129.
Titles. Of reports of analyses of sugars, distribution of hydrometers, &c., 91; Of laws in States and Territories relative to weights and measures, 112—127.
Ton, (2,000 pounds.) Adopted, by law, in different States, 85.
Topographical Engineers, (Bureau.) Furnished with standard yard, 10.

Treasury Department. Supplied with standards of length for public works, 10.
Turpentine, (spirits.) Weight at different temperatures, 197—208.

U.

Utah Territory. Yard measure furnished for land office, 10.

V.

Vara, (Mexican.) Compared with United States standard yard, 19, 180.
Vermont. Abstracts of laws on weights and measures, 35, 42, 43; Titles of laws, 114.
Virginia. Abstracts of laws on weights and measures, 35, 61, 62; Titles of laws, 120, 121.

W.

Washington Territory. Law on weights and measures, 84, 85, 127.
Weights, (U. S. standard.) Description of set and arrangement in boxes, 3, 4; Instructions for using and preserving, 100, 101; Distribution of, 106—109, 110; Condition of sets at custom-houses, 9, 102, 103.
Wheat. Weight of the bushel, by law, in different States, 129.
Wisconsin. Abstracts of laws on weights and measures, 77—79; Titles of laws, 126; Yard measure furnished for land office, 10.
Workshop. Number of mechanics and laborers, 2.

Y.

Yard, (U. S. standard.) How derived, 4; Office comparison of United States yard measures, 175; Of British yard with United States standard, 17, 18, 176, 177.
